Twitter: @csdeptucy

# *Open Letter from the Chairperson of the Department*

## **Dear Students,**

This prospectus contains a concise and comprehensive presentation of the Computer Science Department of the University of Cyprus. Furthermore, in this prospectus you will find information regarding your studies at the Department, including undergraduate and graduate curricula, course descriptions, rules of attendance, prerequisites for graduation, short biographies of the faculty, etc. Up to date information, announcements, news, etc. are published through the website of the department at <http://www.cs.ucy.ac.cy> and on our Twitter (@csdeptucy) or Facebook accounts; also through e-mail and on the announcement boards near the Secretariat of the Department. For personal advice on your studies, or for scientific/ professional orientation, or for any other matter that concerns you and may affect your studies, I strongly encourage you to keep regular contact with the academic advisor assigned to you during your enrolment to the Department.

The Computer Science discipline, albeit a relatively young scientific field, has already been recognized as a key scientific and technological discipline with impressive development and a strong influence on other sciences and the society at large. The growing significance and broad applicability of Computer Science has established the Department of Computer Science as one of the most dynamic and competitive departments in the University of Cyprus. The skills and high educational level that our students gain during their studies are acknowledged both by the local IT industry as well as abroad, as our graduates achieve commendable performance either as employees in the domestic industry or as postgraduate students at leading Universities in Europe and America. The annual student intake of the Department of Computer Science consists of 90 undergraduate students and approximately 35-40 graduate students. Currently, 410 undergraduate, 80 postgraduate and 34 PhD students are enrolled in the Department. Our Department is working systematically towards attracting outstanding students by organizing and supporting annual Computer Science seminars and competitions, such as the Information Day for High School Students and the Logipaignion game-creation contest.

Both the undergraduate and postgraduate curricula have been designed to meet the current challenges and advancements in Computer Science, and cover theoretical foundations, technical knowledge, and experimental methodologies of Computer Science with a strong problem-solving focus. The Department follows on a continuous basis and contributes itself towards the scientific developments and advances of Computer Science, revising and modernizing at regular intervals its curricula, enriching its catalogue of advanced electives, and enhancing the interdisciplinary content of its education provision. In addition, the Department offers a minor in Computer Science for students of other departments of the University of Cyprus. More details are included in this prospectus.

At the postgraduate level, our department offers a Ph.D. program in Computer Science and a number of Masters programmes, including both programmes with a research orientation and programmes with a professional orientation. In addition, from the academic year 2017/18, the Department offers in English a joint Masters programme in “Cognitive Systems”, by distance learning, in collaboration with the Open University of Cyprus and the Department of Psychology of the University of Cyprus.

All programmes of the Department comply with the regulations of the European Credit Transfer and Accumulation System (ECTS). Every student, on the completion of his/her studies receives a Diploma Supplement together with his/her University degree. During your studies, you are strongly encouraged to participate in the European programme ERASMUS+ that supports student exchanges, thus allowing

you to spend a semester of your studies at another academic institute within the European Higher Education Area.

Our Department is in constant dialogue with industry, relevant government departments and centers of excellence abroad to contribute decisively in promoting Cyprus as a center of services, expertise and innovation in Computer, Information and Communication technologies. Also, the Department is working vigorously for the international promotion of our students' skills through attendance and/or awards in international competitions in programming, innovation, entrepreneurship, etc. Overall, our goal is to bestow our students with knowledge, skills and competencies that would enable them to push the frontiers of the Cypriot IT industry towards new highly competitive areas in comparison with the corresponding industries of other countries in our geographical region as well as in Europe.

In these efforts the strong presence of the Department in research is vital. In the twenty six years since its foundation, the Department has developed highly important activities and contributes in the promotion of science and knowledge worldwide. Particularly important is the participation of the Department in research programs of the European Union (EU), as well as domestic programs of the Research Promotion Foundation (RPF) of Cyprus. Specifically, since 2007, faculty members of the Department have attracted more than 160 research projects from the EU and the RPF with a total budget exceeding €21,500,000. Most of this funding has been used to subsidize hundreds of young scientists - researchers, doctoral students, postdoctoral associates and graduate students from Cyprus and abroad, to develop modern research and teaching infrastructure and the development of innovative software systems, hardware and applications. Research results are presented by faculty members and researchers of the Department each year in top Computer Science journals and conferences and are utilized by the international scientific community and industry. In addition, a particularly valuable contribution of the Department is its support towards governmental actions for the uptake of Information and Communication Technologies by the public sector, the promotion of the Internet and the Web in Cypriot businesses and society, and the technological modernization of Secondary Education and Health Services.

During your studies, I urge you to actively engage in the Departmental teaching and research activities to get the utmost regarding knowledge and experience that the Department can offer to you. Also, I invite you to take advantage of courses in other disciplines offered by the various Departments of the University, in order to enhance your knowledge and gain a more comprehensive and universal education. This opportunity is also available through the European Student Exchange Programme ERASMUS+ mentioned above.

Finally, on behalf of all the members of the Department, I once again welcome you and wish everyone a fruitful, creative and productive year!

With best wishes,

Professor Elpida Keravnou-Papailiou,  
Chairperson of the Department of Computer Science

## ACADEMIC CALENDAR 2018-2019

	<b>Fall Semester 2018-2019</b>	<b>Spring Semester 2018-2019</b>
Registration and orientation of new entering students	27/08/2018 – 31/08/2018	08/01/2019 – 11/01/2019
Classes begin	03/09/2018	14/01/2019
Deadline for course selection	07/09/2018	18/01/2019
Deadline for dropping a course	21/09/2018	01/02/2019
Deadline for withdrawal	19/10/2018	01/03/2019
End of classes		22/04/2019 - 05/05/2019
Easter Holidays	30/11/2018	19/04/2019
Reading period	01/12/2018 - 06/12/2018	04/05/2019 - 09/05/2019
Examination Period	07/12/2018 - 21/12/2018	10/05/2019 - 24/05/2019
Christmas Holidays	22/12/2018 – 07/01/2019	
Public Holidays	1st October 28th October 6th Jaanuary	11th March 25th March 1st April 28th April (Easter) 1st May 17th June

# Introduction

The Computer Science field at its early days of birth had a specific scope, mainly concerned with the automation of mathematical calculations; quickly though, it developed into an exciting amalgam of science, technology, and theory. Today, Computer Science addresses a wide range of topics such as extending the range of problems which can be effectively solved using computers; creation, maintenance, and optimization of software and hardware for high performance computer systems; the way in which humans reason, discuss, and plans their activities; modeling the operation of the human brain; and the role of language and logic in problem-solving. Consequently, Computer Science has direct links with all of the Natural Sciences, and with many other branches of human knowledge such as Philosophy, Psychology, Cognitive Sciences, Linguistics, and Management. This multidisciplinary nature of our relatively young field inherits unlimited opportunities for discovering new applications and exploring new research directions.

Nowadays, Computer Science influences essentially every field of human endeavor, with important applications in industry, commerce, economics, education, and medicine. The fast technological growth and the wide spread of computers in our lives has significantly improved the quality of our lives by offering a huge variety of new services such as performing tasks which are too dangerous or too complicated for humans and contributing to the dissemination of knowledge and expertise via knowledge-based systems. Computer networks and distributed processing techniques are widely used and have become essential in today's working environment. The initial misapprehension that people would be replaced by computers has now been dispelled by the realization that computers merely amplify people's natural abilities and provide assistance in performing their work more effectively.

## ***The ECTS System***

As of the academic year 2005-2006, the University of Cyprus has adopted the European Community Course Credit Transfer and Accumulation System, or ECTS for short.

### ***What is ECTS?***

**ECTS**, or *European Credit Transfer and Accumulation Credits*, was developed by the Commission of the European Communities in order to provide common procedures to guarantee academic recognition of studies uniformly throughout Europe. It provides a way of measuring and comparing learning achievements and transferring them from one European institution to another.

*ECTS* provides transparency through the following means:

- *ECTS Credits* which are a numerical value allocated to course units to describe the student *workload* required to complete them.
- The *Information Package*, which supplies written information to students and staff on institutions, departments/faculties, the organizations and structure of studies and course units.
- The *Diploma Supplement*, which shows students' learning achievements in a way which is comprehensive, commonly understood and easily transferable from one institution to another.

### ***The ECTS Credits***

ECTS credits are allocated units to describe the student *workload* required to complete them. They reflect the *quantity* of work each course requires *in relation* to the total quantity of work required to complete a full year of academic study at the institution that is, lectures, practical work, seminars, private work – in library or at home – and examinations or other assessment activities. ECTS credits express a *relative value*. In ECTS, *60 credits* represent the workload of a year of study and *30 credits* are given for a semester.

Credits are awarded only when the course has been completed and all required examinations have been successfully taken.

The expected time for the completion of the Undergraduate Program of Studies is eight semesters. This time can be extended up to twelve semesters. A student is required to complete 240 ECTS units in order to acquire a Bachelor degree in Computer Science at the Undergraduate Programme of Studies. Furthermore for a Master Degree, successful completion of at least 90 ECTS is required with the exemption of the Professional Master in Advanced Information Technologies that requires successful completion of at least 75 ECTS.

## ***General Information***

### ***Class Attendance and Teaching***

Teaching is carried out in the internationally established way through lectures, tutorials, laboratories, etc. Students are expected to consistently participate in all activities of classes they are attending (e.g., lectures, tutorials, laboratories, etc.). The Department reserves the right to disallow students who systematically skip the activities of attended classes from taking the corresponding final examinations.

In most classes, homework is assigned regularly to help students master the course material and develop practical skills. Homework is carried out either individually or collaboratively in small student groups.

Evaluation is usually based on assigned homework, written and oral examinations, etc. Special efforts are made to use continuous evaluation whenever possible.

Students are informed about the specific procedure of teaching and evaluation for each class from its class Instructor. The relevant information is included in the “General Information” sheet for the class, which is handed out to the students during the first week of classes each semester. The Instructor is available to the students during predetermined weekly office hours.

The general rules of studies of the University, the rules that govern the rights and responsibilities of the students, as well as the procedures that need to be followed, are included in separate leaflets. These are made available to the students by the Administrative Service of Academic Affairs and Student Welfare. Student must know all the rules that concern them.

### ***Academic Advisor***

A member of the Department’s academic staff is assigned to each student as an Academic Advisor. The Academic Advisor provides assistance or advice on academic matters (e.g., difficulties in following a class, appropriate combinations of restricted choice classes, etc.), but also advice on other matters such as personal problems.

The role of the Academic Advisor can not be effective without the cooperation of the student. So, both undergraduate and graduate students, especially the freshmen, are strongly encouraged to have frequently meetings with their academic advisors, in order to achieve better preparation and organization of their program of study as well as to resolve related issues and problems. It should be noted that the students are held responsible for their final decisions regarding their academic choices. However, they should keep informed their academic advisor of their decisions.

### ***Student Representation***

Six elected representatives of the students are currently participating in the Departmental Board as members. Furthermore, during each Fall Semester, the Department requests that students elect two representatives per year in order to facilitate intercommunication between the year’s students and the Department.

## ***Secretariat***

Daily activities can be carried out through the Departmental Secretariat. Students are informed by their Academic Advisors on services or other facilities the Secretariat can provide as well as about the specific timings the Secretariat is available to the Students. In particular, the Secretariat can provide any kind of general information regarding the Department or the University.

## ***Course Schedule***

The Class Schedule is not included in this Prospectus, but it is handed out to the students at the beginning of each Semester. Although every possible effort is made to satisfy the scheduling of any reasonable combination of classes, there is, however, a possibility that some students will face difficulties in combining certain of their (restricted or unrestricted) choices due to, e.g., concurrent class meetings. In such cases, students are urged to immediately notify their Academic Advisors.

## ***Library Use***

The University's Library is equipped with a large number of books and scientific journals in Computer Science. These include books that will assist the students in mastering the taught course materials, and, in particular, the books recommended or suggested by Instructors. Therefore the students should have their student ID in order to have access to the library facilities. Regulations for using the Library are separately handed out to the students at the beginning of each academic year.

## ***Electronic Notices / Departmental Website***

The Department uses electronic mail for the fast dissemination of information among the students and its Faculty/Staff members.

Also, all necessary information (courses, talks, announcements, etc) can be found at the Departmental website (<http://www.cs.ucy.ac.cy>). There is also a special section for students called Student's Corner where students can obtain up-to-date important academic information. Furthermore, the department is using social media (facebook and twitter pages) for the better communication among its members.

## ***Electronic Mail***

The use of Electronic Mail for communication between academic staff and students, and also between students themselves, is considered a must, and students are strongly encouraged to learn as soon as possible how to effectively use Electronic Mail. However, it is emphasized that the use of Electronic Mail is not a right of the students, but rather a service provided by the Department. In cases where inappropriate use of Electronic Mail is noticed, the Department reserves the right to disallow its use.

## ***Laboratory Equipment***

A significant part of our Curricula is of practical content. The Department has five laboratories, fully equipped for teaching and research in Computer Science.

- The *Postgraduate Laboratory (201)* consists of 30 last generation computers with Microsoft Windows 7 Enterprise operating system and special software for the support of specialized courses at the graduate level and, more specifically, in the directions of Internet Technologies and Intelligent Systems.
- The *General Teaching Unix Laboratories (B103)* and (103) consists of 33 workstations of the latest generation equipped with the Linux (CentOS 6.0) operating system and Free NX server, and they provide software for the development of various applications.
- The *General Undergraduate Laboratory 1 (B121)* consists of 30 workstations of the latest generation, equipped with the operating system Windows 7, and provided with

software for the development of various applications.

- The *General Undergraduate Laboratory 2 (B123)* consists of 31 workstations each, of the latest generation, equipped with the operating system Windows 7, and it provides software for the development of various applications.
- The *Digital Systems Design and Microprocessor Laboratory (101)* consists of 27 last generation computers with Microsoft Windows 7 Enterprise operating system. Furthermore, there are digital logic and microprocessor boards, oscilloscopes, digital multimeters, logic probes, signal generators and integrated circuit testers. This equipment is used for practical training in hardware. In addition, this Laboratory includes peripheral devices for training in the design of microprocessor systems, and in the development of prototypes.
- The *Walk-in Laboratory (B101)*, in which both personnel and students may bring their portable computers and connect to the Internet and the departmental computer systems.
- The *Tele-education room (148)* is a lecture room of 20 seats and it can be used for: (i) data distribution to remote users, (ii) live and on demand streaming of lectures and presentations, (iii) lecture capturing on DVDs.

More information on the equipment is provided on the website of the Information Systems Technical Support (<http://its.cs.ucy.ac.cy/>).

### ***Laboratory Equipment Use Regulations***

Students are kindly requested to respect fundamental principles of professional behavior regarding health and safety in common rooms and responsible use of laboratory equipment. In particular, the following are indicative examples of disallowed tasks:

- Access to computer systems using somebody else's account
- Inappropriate use of Electronic Mail
- Use of computer systems for purposes other than the "normal" (e.g., development of commercial products, disturbance of users, etc.)
- Use of software products other than those provided by the Computer Center, without the consent of the Computer Center or the Department, respectively.
- Attempt to access confidential information
- Copying software products that belong to others, in violation of international laws of liability.

Specific information regarding Regulations and Time Table for using the Computer Laboratories are handed out to the students at the beginning of each academic year.

## *Awards*

For each academic year, the Department grants, on the basis of academic merit, awards to its undergraduate students. These awards have been founded by external sponsors as follows:

- [1] «Award FINTEZA» from Finteza Ltd, to the excellent students in the second and third year of studies with very high overall academic performance (average at least 9/10) in the academic year 2017-2018 (Monetary award of a total of 10000 Euro)
- [2] «Award iSignthis» from iSignthis eMoney Ltd for the senior year students that attended the course Network and Information Security and at least one more course among one of the following courses: Artificial Intelligence, Logic Programming, and Digital Image Processing, and attained excellent grades in these courses (Monetary award of a total of 7500 Euro)
- [3] «Award Logicom (Public)» from Logicom Public Ltd to the graduating student who has attained the highest overall academic performance (Monetary award of 1000 Euro)
- [4] «Award Wargaming» from Wargaming Group Ltd to the graduating student who has attained the highest overall academic performance (Monetary award of 1000 Euro)
- [5] «Award Cyta» from Cyprus Telecommunication Authority to the graduating student who has attained the highest overall academic performance. (Coupon of value 500 Euro)
- [6] «Award JCC» to the graduating student who has attained the highest overall academic performance (Monetary award of 500 Euro)
- [7] «Award Dot.Cy» from Dot.Cy Developments Ltd to the graduating student who has attained the highest overall academic performance. (Monetary award of 500 Euro)
- [8] «Award SEPAIK» from SEPAIK Union to the graduating student who has attained the highest overall academic performance. (Monetary award of 350 Euro)

Also, the Department itself grants the following awards to its undergraduate students:

- [1] *Special Award* to the undergraduate student who is completing the Minor Program of Studies in Computer Science and has attained the highest overall academic performance in the courses of the minor program. (Monetary award of 340 Euro)
- [2] *Special Award* for the graduating student who has demonstrated exceptional social contribution. (Monetary award of 340 Euro)
- [3] *Award* for the graduate student who has demonstrated outstanding and praise-deserving effort in Memory Polyvios Polyviou. (Monetary award of 500 Euro)
- [4] *Department Award of excellence* to the graduating students of the Department of Computer Science who have achieved an excellent performance . (Over 8.5/10) (Monetary award of 200 Euro/each)

Also, the Department grants, every year, the following awards to its postgraduate students:

- [1] *Award of Mariou Tsakalaki*, donated by the family of the deceased Marios Tsakalakis, for the graduating student who has attained the highest overall academic performance. (Monetary award of 500 Euro)
- [2] *1<sup>st</sup> Award* for the graduating student who has attained the highest overall academic performance. (Monetary award of 680 Euro)
- [3] *2<sup>nd</sup> Award* for the graduating student who has attained the second highest overall academic performance. (Monetary award of 340 Euro)

The Department awards a certificate of excellence to the student with the best overall academic performance in her year for the 1<sup>st</sup>, 2<sup>nd</sup> and 3<sup>rd</sup> academic year, as well as certificates

to all students that have been distinguished in national and international competitions.

## ***Administrative Duties of Academic Staff***

### **Committees/Groups**

- [1] **Postgraduate Program Committee:** *Chr. Christodoulou (coordinator), Y. Dimopoulos, V. Vasileiou*
- [2] **Undergraduate Program Committee:** *A. Philippou (coordinator), C. Pattichis, G. Pallis*
- [3] **Undergraduate Transfers Committee and Correspondence Students:** *G. Papadopoulos (coordinator), Y. Chrysanthou, Y. Dimopoulos*
- [4] **Erasmus+ Program:** *G. Kapitsaki (coordinator), Y. Dimopoulos, A. Philippou*
- [5] **Communication and Promotion:** *G. Kapitsaki (publication coordinator), G. Pallis (website coordinator)*
- [6] **Logipaignion Contest:** *Y. Chrysanthou, G. Pallis, V. Vasiliou, D. Zeinalipour*
- [7] **Hmerida Pliroforikis:** *Y. Dimopoulos (coordinator), Chr. Georgiou, Y. Mylonas*
- [8] **Strategic Planning:** *E. Keravnou-Papailiou (coordinator), A. Philippou, Chr. Christodoulou, M. Dikaiakos, L. Loizou*
- [9] **Liaison with the Industry and Student Internships:** *E. Athanasopoulos (coordinator), M. Dikaiakos, Chr. Georgiou*
- [10] **Liaison with ERCIM:** *Y. Sazeidis (contact point), G. Kapitsaki (editorial board)*
- [11] **Master in Games:** *G. Chrysanthou, C. Pattichis*
- [12] **Summer School:** *V. Vasileiou, G. Chrysanthou*
- [13] **Conact Point for Computer Science Student Club:** *Y. Sazeidis, G. Achilleos*
- [14] **Computer Systems and Infrastructures Committee:** *D. Zeinalipour (coordinator), E. Athanasopoulos, G. Pallis,*
- [15] **Cyprus Penetration Testing Competition:** *E. Athanassopoulos, V. Vassiliou*

### **Representatives/Coordinators:**

- [1] **Library:** *A. Philippou*
- [2] **Diploma Project:** *G. Pallis*
- [3] **Departmental Seminars:** *D. Zeinalipour*
- [4] **Allocation of Teaching Assistantships:** *G. Pallis*
- [5] **ACM ICPC Cyprus Competition:** *G. Kapitsaki*

## ***Undergraduate Program of Studies***

According to the ECTS System, at least 240 ECTS units are required for acquiring a Bachelor's degree in Computer Science.

### ***Objectives and Prospects***

The Undergraduate Program of Studies leads to a Bachelor's degree in Computer Science. The Department aspires to prepare graduates able to pursue careers in positions of responsibility in either academia or industry, where they will effectively drive the development and application of new methods and ideas. The Department attaches particular importance to maintaining links and continuous dialogue with local industry, and we expect our graduates to play a significant role in this respect.

Any curriculum, no matter what its subject, must offer the student education in the widest sense of the term, and cultivate the desire for continuous learning, which, in turn, leads to maturity and develops the facilities for independent and critical thinking. This general objective coexists with and enriches the more specific objectives of individual programs.

We hope that our graduates will acquire a deep understanding of Computer Science, both as a science, and in terms of its more general applications and effects on society. The Curriculum covers the essential practical techniques, together with the deeper principles which underpin them. Our graduates will be well qualified to obtain immediate employment in Cyprus or abroad as IT professionals, or as teachers of Computer Science in secondary education; alternatively, they may choose to continue their studies to postgraduate level, and further pursue a career in either academia or research. Whichever career path they choose, their studies will have given them the necessary grounding to keep abreast of the incredibly rapid scientific and technological developments in Computer Science.

The expected time for the completion of the Undergraduate Program of Studies is eight semesters. This time can be extended up to twelve semesters.

### ***Course Areas***

The Department's undergraduate course material is conceptually divided into the following areas or components: *Theory*, *Computer Systems*, *Problem Solving* and *Applications*.

The *Theory* component is concerned with the foundations of Computer Science: theory and models of computation, and the design and analysis of algorithms. Generally this component aims at cultivating a formal approach to thinking, and organizing and processing information. Logic, and its role as the calculus of Computer Science, is an important topic. Essential concepts of Discrete Mathematics are taught as an integral part of related courses offered by the Department. Students are also required to follow a number of courses offered by the Department of Mathematics and Statistics in order to develop their abilities for abstraction and formal thinking, and to acquire other useful mathematical skills.

The *Computer Systems* component is concerned with hardware and software systems and elaborates on the concepts of parallel and embedded systems. It includes basic principles of computer architecture and organization, operating systems, programming language design and implementation, microprocessor systems, data communications, networks, distributed systems, and parallel and novel architectures.

The *Problem Solving* component aims at developing algorithmic thinking, with emphasis on principles of programming and program design. Through this component, students will acquire competence in a number of programming languages using a variety of programming paradigms (imperative, object-oriented, logic-based). Concurrent, parallel, distributed and

heuristic techniques of problem solving are addressed in restricted choices. In this component, students learn how to design, implement and evaluate solutions to significant, albeit relatively small, problems. The wider integration of these techniques in building methodological frameworks to solve real-world problems is studied in courses on systems analysis and design, and software engineering as indicated in the Applications component.

The *Applications* component aims at bringing together the knowledge and skills acquired in the other three components for the development of useful applications to solve “real-world problems”. Important technologies such as databases, knowledge bases, graphics and user interface managers are introduced as examples of applications in themselves and as vital tools for the construction of higher level applications. Modern Software Engineering methodologies that address every stage in the planning, design, development, and maintenance of high-quality applications are studied, and subsequently put into practice in the context of a group project undertaken in the framework of the course Software Engineering Professional Practice. Finally, important social and ethical issues concerned with the spread of computers are raised and discussed.

The Undergraduate Program of Studies consists of *Compulsory Courses* covering core material, *Restricted Choices* in Computer Science or related subjects, and *Unrestricted Choices* offered by other Departments. Some courses have other courses as prerequisites. The course dependencies between the compulsory courses are depicted in Table 1.

Since the academic year 2016/2017, the Department of Computer Science is offering the following specialisations (existing students follow the previously offered programme of study):

- Computer Networks
- Fundamentals of Computer Science
- Big Data and Internet Computing
- Real World Computation
- Artificial Intelligence
- Software Engineering
- Digital and Embedded Systems

Each specialisation is linked to a number of courses. The aim of the specialisations is to give students the possibility and the motivation to focus on a specific area of Computer Science, via the Elective Courses and an individual diploma project, called undergraduate thesis project. If a student selects at least 3 Elective Courses from the courses indicated for each specialization and undertakes an undergraduate thesis project from the same specialization under the supervision of a faculty member then the respective specialization will be indicated in her transcripts.

Almost all courses offered by the Department in the first four semesters are compulsory and common to all students. Students are asked to choose a direction at the beginning of the fourth semester of their studies. In the fifth and sixth semesters, students are required to take the compulsory courses of their chosen direction, as well as elective courses from other departments. The last two semesters include restricted elective courses (three courses from the chosen direction and any two courses in Computer Science 300 or 400 level) within the direction and elective courses; also, each student must undertake an individual Diploma Project, under the supervision of a member of the Department’s academic staff. The topic of the Undergraduate Thesis Project must relate to the student’s chosen direction of study..

## ***Curriculum***

Each course code has the form XYZ, where X represents the type of the course and Y the area which it belongs to. Courses offered for students of other Departments have, by default, type 0. Compulsory courses are of 1st, 2nd or 3rd type, restricted elective courses are of 4th type while the Diploma Project is of 4th type. Course areas have code 1 (Theory), 2 (Computer Systems), 3 (Troubleshooting) and 4 (Applications). General content courses have area code 0. The direction of Software Engineering has code 6 and the direction of Computer Systems and Networks has code 7. The General Direction has not gotten any code, since the courses are offered from other areas.

Below we cite the indicative programs offered by the Department since the academic year 2016/2017, as well as the courses linked with each specialisation.

.

**Indicative Program**

Semester	Curriculum	ECTS
<b>First Semester</b>	CS111 Discrete Structures in Computer Science and Computation	7,5
	CS131 Programming Principles	7,5
	MAS012 Calculus I	5
	LAN100 General Advanced English	5
	Elective Course	5
<b>Second Semester</b>	CS121 Digital Systems	7,5
	CS133 Object Oriented Programming	7,5
	MAS013 Calculus II	5
	LAN111 English for Computer Science	5
	MAS029 Linear Algebra	5
<b>Third Semester</b>	CS221 Computer Organization and Assembly Programming	7,5
	CS231 Data Structures and Algorithms	7,5
	CS232 Programming Techniques and Tools	7,5
	MAS055 Probability and Statistics	7
	CS202 Explorations into Computer Science	3
<b>Fourth Semester</b>	CS211 Theory of Computation	7,5
	CS222 Operating Systems	7,5
	CS236 Algorithms and Complexity	7,5
	Elective Course	5
<b>Fifth Semester</b>	CS324 Communications and Networks	7,5
	CS342 Database Systems	7,5
	CS343 Software Engineering	7,5
	CS341 Artificial Intelligence	7,5
<b>Sixth Semester</b>	CS325 Parallel Processing	7,5
	CS326 Systems Security	7,5
	CS344 Internet Technologies	7,5
	Elective Course	7,5
<b>Seventh Semester</b>	CS400 Diploma Project I	5
	Restricted Elective Course within the Specialization	7,5
	Restricted Elective Course within the Specialization	7,5
	DDE 468 Enterpreunership and Innovation	5
	Elective Course	
<b>Eighth Semester</b>	CS401 Diploma Project II	10
	Restricted Elective Course	7,5
	Restricted Elective Course	7,5
	Elective Course	5

**Elective Courses from  
Physics, Chemistry, and Biological science departments**

BIO102	Integrative Biology of Organisms
PHY131	General Physics I: Mechanics, Waves and Thermodynamics
PHY132	General Physics II: Electricity, Electromagnetic and Optics
CHE121	Intoduction to Chemistry

**Elective Courses for Specialisation: Computer Networks**

CS422	Advanced Networks
CS423	Network and Information Security
CS427	Mobile Computer Networks
CS428	Internet of Things: Programming and Applications
CS421	Systems Programming
CS432	Distributed Algorithms

**Elective Courses for Specialisation: Fundamentals of Computer Science**

CS411	Programming Languages Semantics
CS412	Logic in Computer Sciences
CS431	Synthesis of Parallel Algorithms
CS432	Distributed Algorithms
CS433	Constraint Programming and Satisfaction
CS495	Special Issues in Computer Science: Computational Complexity

**Elective Courses for Specialisation: Big Data and Internet Computing\***

CS421	Systems Programming
CS446	Advanced Topics in Databases
CS448	Data Mining on the Web
CS481	Software Engineering for Software as a Service
MAS458	Statistical Data Analysis

**Elective Courses for Specialisation: Real World Computation**

CS426	Computer Graphics
CS447	Computer Vision
CS435	Human Computer Interaction
CS444	Computational Intelligent Systems
CS445	Digital Image Processing

### **Elective Courses for Specialisation: Artificial Intelligence**

CS433	Constraint Programming and Satisfaction
CS434	Logic Programming and Artificial Intelligence
CS442	Machine Learning
CS444	Computational Intelligent Systems
CS445	Digital Image Processing
CS447	Computer Vision
CS448	Data Mining on the Web

### **Elective Courses for Specialisation: Software Engineering**

CS441	Advanced Software Engineering
CS449	Professional Practice in Software Engineering
CS421	Systems Programming
CS435	Human Computer Interaction
CS443	Software Reuse
CS481	Software Engineering for Software as a Service

### **Elective Courses for Specialisation: Digital and Embedded Systems**

CS429	Theory and Practice of Compilers
CS421	Systems Programming
CS481	Software Engineering for Software as a Service
CS420	Computer Architecture
CS445	Digital Image Processing
CS428	Internet of Things: Programming and Applications

\* Students of specialisation Big Data and Internet Computing can select the course MAS 458 Statistical Data Analysis from the Department of Mathematics and Statistics. This means that the total number of ECTS will be 0.5 less, since the course has 7 ECTS. The students are encouraged to attend a selective course to cover the 0.5 ECTS in their program.

Regarding the distribution of elective courses in the 4<sup>th</sup> year of their studies in both semesters, the student has the possibility to choose the following alternative program of study, if he/she wishes to:

**7<sup>th</sup> Semester:** Diploma Project I  
3 Restricted Elective Courses  
DDE 4XX Enterpreunership and Innovation

**8<sup>th</sup> Semester:** Diploma Project II  
1 Restricted Elective Course  
2 Elective Courses

### ***Restricted Elective Courses***

In consultation with her/his academic advisor, each student selects Restricted Choices according to her/his interests and professional goals. A student may choose to expand her/his knowledge in one specific area, or may select a combination of courses in more than one area. Thus the Restricted Choices may be selected so that they satisfy, to a certain significant degree, the student's goals and aptitudes.

Graduate courses offered by the Department of Computer Science may also be selected by the student as Restricted Choices after appropriate approval from the Committee of the Undergraduate Program.

### ***Elective Courses***

Each student, in consultation with her/his Academic Advisor, selects elective courses. The selection is made according to the interests and the goals of the student. The Unrestricted Choices must be courses offered by other Departments. According to the Rules for Undergraduate Studies of the University, the elective courses must include courses *from at least three* different Schools of the University. Only one foreign language course of first level is recognized as elective course. If however, a student has succeeded also in the second level course of the same foreign language, both courses are eligible as elective courses.

### ***Foreign Language Courses***

Each student must successfully attend two courses in a foreign language. The Department has allocated 10 ECTS credits for these courses and identifies English as a foreign language.

### ***Diploma Project***

During the last two semesters of her/his studies, each student undertakes an individual Diploma Project in accordance with regulations approved by the Departmental Board (Meeting of 19/7/95). These regulations have been revised by the Departmental Board (Meeting of 06/12/10) and can be found in Appendix A. The Diploma Projects are collected within the open access Digital Library (<http://godigital.cs.ucy.ac.cy>).

### ***Minor Program in Computer Science***

The Minor Program in Computer Science is open to all students of the University outside the Department of Computer Science. It consists of eight courses with a total workload of

at least 60 credits. Given that schooling starts in Spring, the program can be completed in four consecutive semesters for monitoring two courses per semester. The organization of courses is as follows:

**1<sup>st</sup> Semester** (considered as a Fall Semester)

CS131 Programming Principles

CS121 Digital Systems

**2<sup>nd</sup> Semester**

CS133 Object-Oriented Programming

CS221: Computer Organization

**3<sup>rd</sup> Semester**

CS231 Data Structures and Algorithms

CS343 Software Engineering

**4<sup>th</sup> Semester**

Two courses from core courses or from the restrictive elective courses of the Computer Science curriculum.

The number of admitted students in the Minor Program in Computer Science is 10. Necessary criterion for admission is that the weighted average for all previous semesters must be at least 6.5.

***Minor Programme in Biomechanics***

The Minor Programme in Biomechanics requires the successful completion of ten courses with at least 60 ECTS as a total. It has to be completed between 8 and 12 semesters of study.

**Table 1: Dependencies among courses**

<b>Code</b>	<b>Course</b>	<b>Prerequisites / Conditions</b>
CS111	Discrete Structures in Computer Science and Computation	
CS121	Digital Systems	
CS131	Programming Principles

## ***Short Description of Courses***

Each course description includes the name of the instructor that offers the course in the current academic year 2018-2019. For the restricted courses that are not offered in this academic year, the name of the instructor who suggested the course is included instead. The language of instruction for most courses is **Greek**. Courses taught in English are indicated.

### ***CS111 Discrete Structures in Computer Science and Computation***

Type: Compulsory for all directions

Level: Undergraduate

Semester: Fall

Credit: 7,5 ECTS units

Instructor: A. Kakas

Objectives: Introduction to basic mathematical concepts that are applicable to Computer Science. Development of mathematical way of thinking about problems. Provision of some necessary mathematical tools.

Content: Foundations: sets and functions. Logic: Propositional Logic: basics of Predicate Logic. Mathematical Reasoning: methods of proof, induction. Counting: basics of counting, pigeonhole principle, permutations and combinations. Relations: properties and applications, equivalence relations, partial orders. Graphs: basic concepts.

Prerequisites: -----

Bibliography:

1. K. Rosen, *Discrete Mathematics and its Applications*, 5<sup>th</sup> Edition, McGraw-Hill, 2003.

Teaching methods: Lectures (3 hours weekly) and Recitation (1 hour weekly).

Assessment: Final exam, midterm exam and homework.

### ***CS121 Digital Systems***

Type: Compulsory for all directions

Level: Undergraduate

Semester: Fall

Credit: 7,5 ECTS units

Instructor: C. Pattichis

Objectives: Introduce various representations of information in a digital computing system. Presentation of the building blocks of digital computing systems. Teach the basic methods for the design and analysis of digital systems. Practical implementation of a simple digital computing system.

Content: Principles of design and construction of digital electronic systems and computers. Representation of data with binary sequences. Data storage and processing by electronic digital circuits. Consolidation of theoretical knowledge through practical exercises in the design and construction of digital circuits in the laboratory for Digital Systems Design and Microprocessors.

Prerequisites: -----

Bibliography:

1. M. Mano and D.Kime, *Logic and Computer Design Fundamentals and Xilinx 4.2 Package*, 3<sup>rd</sup> Edition, Prentice Hall, 2003.

Teaching Methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final exam, midterm exam, quizzes and homework (final project and exercises).

### ***CS131 Programming Principles***

Type: Compulsory

Level: Undergraduate

Semester: Fall and Spring

Credit: 7.5 ECTS units

Instructor: E.Keravnou-Papailiou (fall /spring)

Objectives: Introduction of methods for problem-solving through programming. Development of procedural and object-oriented problem solving skills and algorithmic

thinking. Provision of deep understanding of basic programming principles and algorithmic techniques, design, implementation, testing and debugging of modular programs. Understanding the important concepts of program abstraction and data abstraction. Mastering of a high-level programming language (Java).

Content: Presentation of the software development process and introduction to the basic principles of programming and program design using the Java language. Global overview of the Java language with emphasis on built-in and abstract data types, control structures, functions, modular programming and reusability.

Prerequisites: -----

Bibliography:

1. R. Sedgewick and K. Wayne, *Introduction to Programming in Java: An Interdisciplinary Approach*, Addison Wesley, 2008.

Teaching methods: Lectures (3 hours weekly), Laboratory sessions (4 hours weekly) and Recitation (1 hour weekly).

Assessment: Final exam, midterm exam, homework (programming assignments) and quizzes.

### **CS133 Object Oriented Programming**

Type: Compulsory

Level: Undergraduate

Semester: Fall and Spring

Credit: 7.5 ECTS units

Instructor: M. Dikaiakos

Objectives: Familiarization with Object Oriented Programming principles. Understanding of advanced concepts of the Java programming language.

Content: use of object oriented methodology for problem solving. Abstraction and information hiding. Packages. Strings, CRC cards and class diagrams. Inheritance. Polymorphism, Exceptions. Inner classes. Input-output. Type Information. Generics. Collections. Annotations and lambda expressions.

Prerequisites: CS131

Bibliography:

1. B. Eckel, *Thinking in Java*, 4<sup>th</sup> Edition, Prentice Hall, 2006.
2. C. Thomas Wu, *An Introduction to Object-Oriented Programming with Java*, 5<sup>th</sup> Edition, Mc Graw Hill, 2006

Teaching methods: Lectures (3 hours weekly), Laboratory sessions (2 hours weekly) and Recitation (1 hour weekly).

Assessment: Final exam, midterm exam and homework.

### **CS202 Explorations into Computer Science**

Type: Compulsory

Level: Undergraduate

Semester: Fall

Credit: 3 ECTS units

Instructor: E.Keravnou-Papailiou

Objectives: Introduction to topics that compose a global picture of Computer Science. Creation of enthusiasm and interest in Computer Science. Update about current developments in Computer Science. Familiarization with practical applications of Computer Science.

Content: Weekly lectures/seminars that cover a broad spectrum of Computer Science and its basic areas, starting from its birth and reaching its modern evolutions. Revolutionary ideas for the foundation and development of Computer Science.

Prerequisites: -----

Bibliography: -----

Teaching methods: Lectures / Seminars (1.5 hours weekly).

Assessment: Group project and presentation, class participation and attendance.

### **CS211 Theory of Computation**

Type: Compulsory

Level: Undergraduate

Semester: Spring

Credit: 7,5 ECTS units

Instructor: A. Philippou

Objectives: Introduction to foundational concepts of the Theory of Computation. Development and cultivation of formal and syllogistic reasoning. Familiarization with fundamental techniques for proofs and mathematical reasoning. Realization of the limitations on the capabilities of computers.

Content: Formal methods of computation based on machines, grammars and languages: finite automata vs. regular languages; pushdown automata vs. context-free grammars; Turing machines vs. unrestricted grammars. Models of computation equivalent to Turing machines and Church's Thesis. Computability and Uncomputability. Introduction to Theory of Computational Complexity with emphasis on the Theory of NP-completeness.

Prerequisites: CS111, MAS012

Bibliography:

1. M. Sipser, *Εισαγωγή στη Θεωρία Υπολογισμού*, Πανεπιστημιακές Εκδόσεις Κρήτης, 2007
2. M. Mavronicolas, *Θεωρία Υπολογισμού*, προσχέδιο βιβλίου, Αύγουστος 2005.
3. H. R. Lewis and C. H. Papadimitriou, *Elements of the Theory of Computation*, 2<sup>nd</sup> Edition, Prentice Hall, 1998.

Teaching methods: Lectures (3 hours weekly) and Recitation (1 hour weekly).

Assessment: Final exam, midterm exam and homework.

### ***CS221 Computer Organization and Assembly Language Programming***

Type: Compulsory

Level: Undergraduate

Semester: Fall

Credit: 7,5 ECTS units

Instructor: .....

Objectives: Introduction to the basic concepts and methods of computer organization. Present trends of various computer technology parameters. Introduction of the concept of instruction set architecture. Teach different instruction sets and assembly programming. Design of a pipelined datapath. Learn basic principles of memory hierarchy. Implement a simple computing system. Practical experience in the Digital Logic and Microprocessors Laboratory.

Content: Introduction to computer organization and architecture. Types of instructions, coding of instructions, Arithmetic and Logic Unit. Basic principles of the organization of the main functional units of a computer system at machine level: Central Processing Unit (CPU), memory, and Input/Output. Interfacing CPU and peripheral units. Programming in assembly language for MIPS R2000/R3000 and Intel Pentium.

Prerequisites: CS121, CS131

Bibliography:

1. D. A. Patterson, J. L. Hennessy, *Computer Organization and Design - The Hardware/Software Interface*, Third Edition, Morgan Kaufmann, 2005.

Teaching Methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final and midterm exams, quizzes and homework (final project and exercises).

### ***CS222 Operating Systems***

Type: Compulsory

Level: Undergraduate

Semester: Spring

Credit: 7,5 ECTS units

Instructor: G. Papadopoulos

Objectives: Introduction to the basic principles of design and operation of modern operating systems. Familiarization with the various operation levels and mechanisms, case studies involving typical operating systems like UNIX and Windows as well as the dual role of the operating system, as manager of the various parts of the computer hardware and supplier of offered services to the user.

Content: Introduction, history and evolution of operating systems. General structure, operations and characteristics of an operating system. Concurrency. Process management. Scheduling and dispatch. Real and virtual memory management. I/O management and disk scheduling. File management.

Prerequisites: CS221, CS232

Bibliography:

1. W. Stallings, *Operating Systems: Internals and Design Principles*, 9<sup>th</sup> Edition, Prentice Hall, 2015.

Teaching methods: Lectures (3 hours weekly) and tutorial sessions (2 hours weekly).

Assessment: Final exam, midterm exam and homework (theoretical and programming assignments).

### **CS231 Data Structures and Algorithms**

Type: Compulsory

Level: Undergraduate

Semester: Fall and Spring

Credit: 7,5 ECTS units

Instructor: G. Pallis (Fall) / ..... (Spring)

Objectives: Familiarization with data structures and the algorithms manipulating them. Appreciation of the importance of careful organization of information for efficient searching and modification. Acquaintance with techniques for the analysis of algorithm efficiency. Developments of capabilities for designing algorithms to minimize their execution time and space requirements.

Content: Study of data structures for the organization and efficient processing of data. Linear and non-linear data structures. Hashing techniques. Issues of memory management. Sorting Algorithms. Graph Algorithms. Introduction to algorithm design techniques. Analysis of the average and worst-case complexity of algorithms.

Prerequisites: CS111, CS132

Bibliography:

1. M. A. Weiss, *Data Structures and Algorithms in Java*, Pearson, 2012.
2. M. Goodrich, R. Tamassia. *Data Structures and Algorithms in Java*, Wiley, 2011.

Teaching methods: Lectures (3 hours weekly), Laboratory sessions (2 hours weekly) and Recitation (1 hour weekly).

Assessment: Final exam, midterm exam and homework (theoretical and programming assignments).

### **CS232 Programming Techniques and Tools**

Type: Compulsory

Level: Undergraduate

Semester: Fall

Credit: 7,5 ECTS units

Instructor: D. Zeinalipour

Objectives: The course teaches intermediate and advanced programming concepts, techniques and tools through a language that compiles to machine code. The course familiarizes the students with advanced programming constructs utilized for handling memory and files. Advanced topics in compilation, debugging, documentation and optimization of software. Methodological aspects in developing large-scale system software that addresses complex problems. Basic commands for programmers in the UNIX operating system.

Content: i) Introduction to C for Programmers: types x86/x64, loops, selections, expressions, arrays, functions, IO, basic program organization, ii) Advanced C programming constructs: program anatomy and processes, memory and addresses (pointers, pointers and arrays, strings and examples), structures, unions and enumerations. Linear and non-linear programming data structures (dynamic memory allocation, lists, queues, doubly-linked lists, trees, applications and examples). iii) Advanced Compilation Topics and Tools: preprocessor directives, compiling multiple files with makefiles, static (.a) and dynamic (.so) linking of object files (.o), error handling (assert.h), static and dynamic code analysis (valgrind and gprof). iv) low-level programming (binary operators and examples, binary files and

hexdump). v) Basic commands for programmers in the UNIX operating system: file system, redirection and pipes, permissions and basic filters.

Prerequisites: CS 131

Bibliography:

1. *C Programming: A Modern Approach*, K.N. King, 2<sup>nd</sup> Edition, W. W. Norton & Company, 2008.
2. *Programming in C*, 4th Edition, Stephen G. Kochan, Addison-Wesley Professional, 2015.
3. *Your UNIX/Linux: The Ultimate Guide, 3rd Edition*, Sumitabha Das, McGraw Hill, 2013.
4. *Η Γλώσσα C σε Βάθος*, Νίκος Χατζηγιαννάκης, Τρίτη Έκδοση, Κλειδάριθμος, 2009.

Teaching methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final exam, midterm exam, programming assignments.

### **CS236 Algorithms and Complexity**

Type: Compulsory

Level: Undergraduate

Semester: Spring

Credit: 7,5 ECTS units

Instructor: M. Mavronicolas (Winter) / Ch. Georgiou (Spring)

Objectives: Familiarization with fundamental techniques of designing and analyzing algorithms. Familiarization with significant algorithms in various fields that have been suggested in the literature. Familiarization with techniques for implementing and empirically evaluating algorithms.

Content: Topics in the design and analysis of efficient algorithms and their complexity. Significant algorithms in Graph Theory, Algebra, Geometry, Number Theory and Combinatorics. General algorithmic techniques (e.g., divide-and-conquer, backtracking, dynamic programming). Randomized, Parameterized and Approximation algorithms. Fast Fourier Transform. Inherent lower bounds on problem complexity.

Prerequisites: CS231

Bibliography:

1. J. Kleinberg and E. Tardos, *Σχεδίαση Αλγορίθμων*, Εκδόσεις Κλειδάριθμος, 2008. (English Version: J. Kleinberg and E. Tardos, *Algorithm Design*, Addison Wesley, 2006).
2. S. Dasgupta, C. Papadimitriou and U. Vazirani, *Αλγόριθμοι*, Εκδόσεις Κλειδάριθμος, 2009.

Teaching methods: Lectures (3 hours weekly) and Recitation (1 hour weekly).

Assessment: Final exam, midterm exam and homework (theoretical and programming assignments).

### **CS324 Communications and Networks**

Type: Compulsory

Level: Undergraduate

Semester: Fall

Credit: 7,5 ECTS units

Instructor: A. Pitsillides

Objectives: Familiarization with fundamental topics in communication networks, with a focus on the Internet.

Content: Introductory course in Computer Networks. The goal is the understanding and use of concepts related to fundamental issues in Communication Networks, using the Internet as an example. Deals with Networking layers, such as the application, transport, network, and data link layers. Open systems and internetworking. Networking technologies including wired and wireless Local Area Networks and network topologies. Algorithms, including routing and congestion control. Introduction to quality of service (QoS) and multimedia applications. Laboratory session includes practical exercises with wireshark and simulations using OPNET

Prerequisites: CS131

Bibliography:

1. J. F. Kurose and K. W. Ross, *Computer Networking: A Top-Down Approach Featuring the Internet*, 7<sup>th</sup> Edition, Addison-Wesley, 2016.

Teaching methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final exam, midterm exam and homework (including laboratory exercises).

### **CS325 Parallel Processing**

Type: Compulsory

Level: Undergraduate

Semester: Spring

Credit: 7,5 ECTS units

Instructor: Y. Sazeidis

Objectives: Introduction to the fundamental concepts of Parallel Processing with emphasis on parallel machines and parallel programming.

Content: The entire spectrum of parallel machines as appearing in Flynn's classification: SISD, SIMD, MISD, MIMD. The main approaches for design and operation of multiprocessor systems. Conventional and non-conventional machines (Data-flow and reduction). Parallel programming approaches: (1) Automatic-parallelizing compilers, (2) Extending serial languages with parallelizing constructs, (3) parallel languages for Functional Programming. Special emphasis on parallel architectures and parallel programming.

Prerequisites: CS222

Bibliography:

1. D. E. Culler and J. P. Singh, *Parallel Computer Architecture – A Hardware/Software Approach*, Morgan Kaufmann, 1999.

Teaching methods: Lectures (3 hours weekly) and Recitation (1 hour weekly).

Assessment: Final exam, midterm exam, homework and final project.

### **CS326 Systems Security**

Type: Compulsory

Level: Undergraduate

Semester: Spring

Credit: 7,5 ECTS units

Instructor: E. Athanasopoulos

Objectives: Introduction to systems security which covers a wide range of concepts. Primarily, the course helps students to become familiar with different research areas of modern systems security by covering topics such as applied cryptography, software vulnerabilities and exploitation, defenses, mobile security, web security, network security, privacy, and anonymity. Additionally, students will be able to perform engineering tasks in cryptography, software exploitation, network security, and program analysis.

Content: Introduction to applied cryptography (early ciphers, modern symmetric and asymmetric ciphers, cryptographic hash functions and MACs, applications). Software vulnerabilities (buffer overflows, integer overflows, use-after-free). Control-flow attacks (code injection, code reuse). Defenses (non-executable pages, stack canaries, code randomization, CFI). Isolation techniques (SFI). Static and dynamic analysis of software. Mobile security (Android, iOS). Web security (cross-site scripting, CSRF, clickjacking, phishing). Network security (TLS, botnets, DDoS). Authentication and passwords. Privacy and anonymity (TOR).

Prerequisites: CS232

Bibliography:

1. Alfred J. Menezes, Paul C. van Oorschot and Scott A. Vanstone. *Handbook of Applied Cryptography*, CRC Press, (<http://cacr.uwaterloo.ca/hac/>).
2. Ross Anderson. *Security Engineering: A Guide to Building Dependable Distributed Systems*, 2<sup>nd</sup> Edition, Wiley, (<http://www.cl.cam.ac.uk/~rja14/book.html>)
3. Christof Paar and Jan Pelzl: *Understanding Cryptography: A Textbook for Students and Practitioners*, Springer.

4. Published papers.

Teaching methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final exam, midterm exam and homework (including laboratory assignments).

### **CS341 Artificial Intelligence**

Type: Compulsory

Level: Undergraduate

Semester: Spring

Credit: 7,5 ECTS units

Instructor: Y. Dimopoulos

Objectives: Artificial Intelligence (AI) covers a broad spectrum of areas and this gives it an interdisciplinary character. The expert systems technology constitutes an important component of the applicative part of AI. The principal objectives of the course are (a) to introduce students to central areas of AI, that are directly relevant to the technology of expert systems, namely problem solving through the use of search and heuristics, and knowledge representation, and (b) to introduce students to the expert systems technology, focusing on first and second generation architectures and knowledge engineering methodologies.

Content: Problem solving techniques in Artificial Intelligence. Knowledge Representation Formalisms (logic, associative networks, frames, production rules). Expert Systems Technology. First and Second Generation Architectures for Expert Systems. Knowledge Engineering. Intelligent Agents. Multi-Agent Systems.

Prerequisites: CS231

Bibliography:

1. E. Κεραυνου, *Τεχνητή Νοημοσύνη και Έμπειρα Συστήματα*, Ελληνικό Ανοικτό Πανεπιστήμιο, 2000.
2. G.F. Luger and W.A. Stubblefield, *Artificial Intelligence: Structures and Strategies for Complex Problem Solving*, 5<sup>th</sup> Edition, Addison-Wesley, 2005.
3. G. Weiss (ed), *Multiagent Systems: a modern approach to distributed AI*, The MIT Press, 1999.
4. P. Jackson, *Introduction to Expert Systems*, 3<sup>rd</sup> Edition, Addison-Wesley, 1999.
5. E. Rich and K. Knight, *Artificial Intelligence*, 2<sup>nd</sup> Edition, McGraw-Hill, 1991.
6. S. Russel and P. Norvig, *Artificial Intelligence: A Modern Approach*, 2<sup>nd</sup> Edition, Prentice Hall, 2002.

Teaching methods: Lectures (3 hours weekly) and Tutorials (1 hour weekly).

Assessment: Final exam, midterm exam and homework (theoretical and programming assignments).

### **CS342 Databases**

Type: Compulsory

Level: Undergraduate

Semester: Fall

Credit: 7,5 ECTS units

Instructor: D. Zeinalipour

Objectives: Introduction to the basic principles needed for the design and the use of a database. Provision of practical exercises in the application of these concepts with the use of an industrial system for database.

Content: Introduction to Databases. Organization and proper management of large quantities of data for use in applications. Database models such as the entity-relation model, the relational model, the network model and the hierarchical model.

Prerequisites: CS231

Bibliography:

1. R. Elmasri and S. Navathe, *Fundamentals of Database Systems*, Fifth Edition, Addison-Wesley, 2007.
2. R. Elmasri and S. Navathe, *Θεμελιώδεις Αρχές Συστημάτων Βάσεων Δεδομένων*, 5<sup>th</sup> Edition, 1<sup>ος</sup> τόμος, Εκδόσεις Διάυλος, 2007.

3. R. Ramakrishnan and J. Gehrke, *Database Management Systems*, 3<sup>rd</sup> Edition, McGraw-Hill, 2003.

Teaching methods: Lectures (3 hours weekly), Recitation (1.5 hour weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final exam, midterm exam and homework (theoretical assignments, final project).

### **CS343 Software Engineering**

Type: Compulsory

Level: Undergraduate

Semester: Winter

Credit: 7,5 ECTS units

Instructor: G. Kapitsaki

Objectives: Familiarization with and assimilation of the approaches, methodologies, models and tools used to develop quality software systems. Understanding of software architectures, software modeling and testing. Understanding of software testing process and of software architecture design patterns. Applications of software creation methodologies on the construction of a real software system. Understanding of software testing procedures. Use and application of architecture design patterns.

Content: Methods, tools, and procedures for the development and maintenance of large-scale software systems. Existing life-cycle models (e.g. waterfall model). Introduction to Agile development. Requirements analysis and specification techniques. Software development methodologies. Unified Modelling Language (UML) and supported static and dynamic diagrams. Code transformation. Practical experience with CASE tools for modeling data and procedures (Modelio). Prototyping for Web applications (HTML, CSS). Architectural Design patterns (Model View Controller etc.). Software verification and validation. Unit testing and frameworks (JUnit etc.). CASE tools. Project planning and management.

Prerequisites: CS133

Bibliography:

1. I. Sommerville, *Software Engineering*, 10<sup>th</sup> Edition, Addison-Wesley, 2016.
  2. R. Pressman, *Software Engineering: A Practitioner's Approach*, 8<sup>th</sup> Edition, McGraw Hill, 2015.
  3. J. Whitten, L. Bentley και K. Dittman, *Systems Analysis and Design Methods*, 7<sup>th</sup> Edition, McGraw-Hill, 2007.
4. Teaching methods: Lectures (3 hours weekly) and Laboratory sessions (2 hours weekly).  
Assessment: Final exam, midterm exam, homework (project) and lab exercises.

### **CS344 Internet Technologies**

Type: Compulsory

Level: Undergraduate

Semester: Spring

Credit: 7,5 ECTS units

Instructor: V. Vassiliou

Objectives: Introduction to Internet and the World-Wide Web Technologies. Emphasis on WWW protocols and programming of Internet Systems and Services.

Content: Internet Fundamentals, Principles of Hypertext, HTML and Mark-up Languages, Cascading Style Sheets, Page Layouts, Web Design & Development, Dynamic content and HTML Forms, Client-Side Programming, Introduction to Web2.0 principles and AJAX,

Prerequisites: CS133, CS324

Bibliography:

1. A. Moller and M. Schwartzbach, *An Introduction to XML and Web Technologies*, Addison Wesley, 2006.

Teaching methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final exam, Midterm Exam, and homework assignments.

### **CS412 Logic in Computer Sciences**

Type: Restricted choice

Level: Undergraduate

Semester: Fall

Credit: 7,5 ECTS units

Instructor: A. Philippou

Objectives: The main objective of the course is to prepare students for using logic as a formal tool in Computer Science. Furthermore, it aims to develop and cultivate formal and syllogistic reasoning and provide a thorough introduction to computational logic and its applications in Computer Science. Content: Propositional Logic Syntax, Semantics, Normal Forms, Decision Procedures, Proof Theory, Compactness and Resolution. Predicate Logic: Syntax and Semantics, Proof Theory Soundness and Completeness and Resolution. Logic Programming. Programming Language Semantics and Verification. Linear and Branching Temporal Logics: Syntax, Semantics, and model-checking algorithms.

Prerequisites: CS111

Bibliography:

1. M. Huth and A. Ryan, *Logic in Computer Science: Modeling and Reasoning about Concurrent Systems*, Cambridge University Press, 2000.
2. M. Ben-Ari, *Mathematical Logic for Computer Science*, Springer-Verlag, 2<sup>nd</sup> Edition, 2003.
3. U. Schoning, *Logic for Computer Scientists*, Springer-Verlag, 2<sup>nd</sup> Printing, 2008.

Teaching methods: Lectures (3 hours weekly) and Recitation (1 hour weekly).

Assessment: Final exam, midterm exam and homework.

### **CS413 Computational Geometry**

Type: Restricted choice

Level: Undergraduate

Semester: Spring

Credit: 7,5 ECTS units

Instructor: A. Philippou

Objectives: -----

Content: Convex hull in the plane: basic properties and algorithms from computing it. Arrangements of line segments: computing intersections, representing subdivisions, computing an overlay. Arrangements of lines: incremental construction algorithm. The Art Gallery Problem: partition into monotone polygons, monotone polygon triangulation, simple polygon triangulation. Geometric searching: kd-trees, range trees, fractional cascading. Point location: basic properties of the trapezoid map, algorithm for constructing map and search structure, point location algorithm. Voronoi diagram: basic properties and algorithms for computing it. Delaunay triangulation: basic properties, incremental algorithm.

Prerequisites: CS231

Bibliography:

1. M. de Berg, M. van Kreveld, M. Overmars and O. Schwarzkopf, *Computational Geometry: Algorithms and Applications*, 2<sup>nd</sup> Edition, Springer, 2000.
2. Γ. Ζ. Εμίρης, *Υπολογιστική Γεωμετρία: Μία σύγχρονη αλγοριθμική προσέγγιση*, Κλειδάριθμος, 2009.

Teaching methods: Lectures (3 hours weekly) and Laboratory (1 hour weekly).

Assessment: Final exam, midterm exam and homework (theoretical and laboratory exercises).

### **CS420 Computer Architecture**

Type: Compulsory

Level: Undergraduate

Semester: Fall

Credit: 7,5 ECTS units

Instructor: P. Evripidou

Objectives: Introduction to current methodology for performance evaluation and comparison of computer systems. Presentation of basic and advanced concepts in the organization of modern microprocessors. Examination of current trends in the computer architecture area.

Content: Introduction to the state-of-the-art uniprocessor, high performance computer architecture. Emphasis on quantitative analysis and cost/performance trade-offs in the design of the basic units of a processor: instruction set, pipelining, memory system and input/output systems. Qualitative analysis of real machines and their performance data.

Prerequisites: CS222

Bibliography:

1. J. Hennessy and D. Patterson, *Computer Architecture: A Quantitative Approach*. 3<sup>rd</sup> Edition. Morgan Kaufmann, 2002.
2. Selected research articles

Teaching Methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final exam, midterm exam and homework (project and exercises).

### **CS421 Systems Programming**

Type: Restricted choice

Level: Undergraduate

Semester: Spring

Credit: 7,5 ECTS units

Instructor: D. Zeinalipour

Objectives: The main objective of this undergraduate course is to allow students develop complex system-level software in the C programming language while gaining an intimate understanding of the UNIX operating system (and all OS that belong to this family, such as Linux, the BSDs, and even Mac OS X). Topics covered will include the user/kernel interface, fundamental concepts of UNIX, user authentication, basic and advanced I/O, filesystems, signals, process relationships, and inter-process communication. Fundamental concepts of software development and maintenance on UNIX systems will also be covered. The taught concepts have an application to the whole family of UNIX OSs (e.g., Linux, MacOS, HP-UX, AIX, Solaris, Android, iOS, Raspbian) but also apply to Windows (e.g., Powershell and windows system calls).

Contents: i) Advanced commands of the UNIX operating system for administrators: filters with regular expressions, system utilities and stream editors (awk, sed). ii) Advanced shell programming with an emphasis on Bash: environment, control structures, debugging. iii) Low-level I/O system calls with C. iv) Process management: environment, control and signals, inter-process communication (IPC) with an emphasis on pipes and named pipes (FIFO), XSI IPC: semaphores, shared memory and message queues, network IPC (TCP Sockets) and the client/server model. v) Multithreaded programming, concurrency and performance aspects. Implementing network protocols from RFC documents. v) System security aspects, managing cluster computers and clouds: virtualization, data centers and Green IT.

Prerequisites: CS 222

Bibliography:

1. Sumitabha Das, *Your UNIX/Linux: The Ultimate Guide*, 3<sup>rd</sup> Edition, McGraw Hill, 2013.
2. Evi Nemeth, Garth Snyder, Trent R. Hein and Ben Whaley. *UNIX and Linux System Administration Handbook, 4th Edition*, Prentice Hall, 2011.
3. Randal E. Bryant, David R., *Computer Systems: A Programmer's Perspective*, 3<sup>rd</sup> Edition, O'Hallaron, 2016.
4. W. Richard Stevens, Stephen A. Rago, *Advanced Programming in the UNIX Environment*, 3<sup>rd</sup> Edition, Addison-Wesley Professional, 2013.

Teaching Methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final exam, midterm exam, programming assignments.

### **CS422 Advanced Networks**

Type: Restricted choice

Level: Undergraduate

Semester: Spring

Credit: 7,5 ECTS units

Instructor: V. Vassiliou

Language: English

Objectives: Extension of the basic knowledge about Computer Networks regarding architectures, techniques and protocols for the Internet.

Content: Advanced topics in Computer Networks and the Internet, such as: IPv6, Multicast Routing, QoS Routing, TCP Congestion Control, Performance Analysis, Multimedia Networking Applications, Realtime services and protocols, Quality of Service, MPLS, Traffic Engineering, Mobile and Wireless Networks, Issues in Security for Computer Networks. Introduction to advanced research topics (e.g. Internet of Things, wireless sensor networks, VANETs, 5G, Nanonetworks). Introduction to Network Management, Software Defined Networks. Cloud and Fog Computing..

Prerequisites: CS324

Bibliography:

1. J. F. Kurose and K. W. Ross, *Computer Networking – A Top Down Approach Featuring the Internet*, 7<sup>th</sup> Edition, Addison-Wesley, 2016.
2. Y.-D. Lin, T.-H. Hwang, and F. Baker, *Computer Networks, An Open Source Approach*, McGraw Hill, 2011

Teaching methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final exam, midterm exam and homework (including laboratory exercises).

### **CS423 Network and Information Security**

Type: Restricted choice

Level: Undergraduate

Semester: -----

Credit: 7,5 ECTS units

Instructor: V. Vassiliou

Objectives: Introduction to network and information security principles, understanding of basic areas in Cryptography, Authentication and Confidentiality. Gain of knowledge in methods for the evaluation of Software, Applications and Systems with respect to security. Application of tools for the protection of networks, applications and information.

Content: Introduction to Security Threats and Attacks, Cryptographic Techniques (encryption, cryptanalysis, authentication, confidentiality), identification and authentication (Kerberos, PKI), Internet Application security protocols (PGP, SSL/TLS), Network security (Firewalls, IDS), Defending against threats on endsystems, Checking of networks and applications for vulnerabilities, Other issues in network and information security (privacy, ethics, legal framework).

Prerequisites: CS324

Bibliography:

1. W. Stallings, *Network Security Essentials*, 3<sup>rd</sup> Edition, Pearson-Prentice Hall, 2007.
2. C.P. Pfleeger, S.L. Pfleeger, *Security in Computing*, 4<sup>th</sup> Edition, Prentice Hall, 2006.

Teaching methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory (2 hours weekly).

Assessment: Final exam, midterm exam and homework.

### **CS424 Digital Signal Processing**

Type: Restricted choice

Level: Undergraduate

Semester: .....

Credit: 7,5 ECTS units

Instructor: A. Pitsillides

Objectives: Introduction to Digital Signal Processing (DSP) methods and applications.

Content: Discrete signals and systems, sampling of signals, frequency analysis of discrete systems and signals, z-transform, Fourier-Transform, Discrete Fourier Transform, and Fast Fourier Transform, digital filters, application examples.

Prerequisites: CS111, MAS016, MAS017

Bibliography:

1. S. Theodorides, *Digital Signal Processing*, Univeristy of Patras Publishing, 1992.
2. J. H. McClellan, R. W. Schafer and M. A. Yoder, *DSP First*, Prentice Hall, 1998.
3. The Student Edition of Matlab: *User's, Guide*, Prentice Hall, 2005.

Teaching methods: Lectures (3 hours weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final exam, midterm exam and homework (laboratory exercises, additional exercises, final project).

### **CS426 Computer Graphics**

Type: Restricted choice

Level: Undergraduate

Semester: Fall

Credit: 7,5 ECTS units

Instructor: Y. Chrysanthou / .....

Language: English

Objectives: Introduction to the basic principles of digital image synthesis. Explain how a 3-dimensional virtual world is defined starting from the geometry, the materials, the lights and cameras and how the 2-dimensional resulting image is produced by going through the graphics pipeline. Provision of both the theoretical foundations as well as practical skills through the use of industry standards, such as OpenGL or DirectX.

Content: Scene construction, scene hierarchies, camera specification, projections of primitives, clipping, visible surface determination, polygon rasterisation (z-buffer), texture mapping, local and global illumination, shadows, ray tracing, radiosity, real-time acceleration techniques.

Prerequisites: CS132

Bibliography:

1. M. Slater, A. Steed and Y. Chrysanthou, *Computer Graphics and Virtual Environments: From Realism to Real-Time*, Addison-Wesley, 2001.
2. P. Shirley, M. Ashikhmin and S. Marschner, *Fundamentals of Computer Graphics*, 3rd Revised Edition, 2009.

Teaching methods: Lectures (3 hours weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final exam, midterm exam and homework.

### **CS427 Mobile Computer Networks**

Type: Restricted Choice

Level: Undergraduate

Semester: Fall

Credit: 7,5 ECTS units

Instructor: .....

Objectives: The objective of this course is to introduce students into wireless mobile/local/cellular networks with an emphasis on the fundamental concepts and principles of the technology which are important for the design, application, evaluation and development of these systems. The course will also cover new architectures and topologies, existing and proposed standards as well as open research issues.

Content: Wireless environment, Interference and other problems in wireless communications, Architectures and technologies of wireless networks and wireless communication, Wireless MAC protocols, Wireless Local Area Networks (WLAN), Mobile Networks (emphasis on latest architectures, 3G, 4G, 5G), Mobility Management, wireless network technologies (ad-hoc, sensor, vehicular networks, Internet of Things), Open research issues and challenges.

Prerequisites: CS324

Bibliography:

- 1.
2. Introduction to Wireless and Mobile Systems, Dharma P. Agrawal, Qing-An Zeng , 3rd Edition, CL-Engineering; 3 edition (June 10, 2010).

3. *Wireless Communications and Networks*, W. Stallings, Prentice Hall, Second Edition, 2002.
4. *From GSM to LTE: An Introduction to Mobile Networks and Mobile Broadband*, Martin Sauter, 2011 John Wiley & Sons, Ltd.
5. *Mobile Communications, Second edition*, J. Schiller, Addison-Wesley, 2003.

Teaching methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory (2 hours weekly).

Assessment: Final exam, midterm exam and homework.

### ***CS428 Internet of Things: Programming and Applications***

Type: Restricted Choice

Level: Undergraduate

Semester: Spring

Credit: 7,5 ECTS units

Instructor: P. Evripidou

Language: English

Objectives: -----

Content: Programming of embedded systems. Introduction to the Internet of Things. Introduction to the mobile processors of ARM for embedded systems. Interruptions and memory consumption. Programming for embedded and mobile systems. Mobile computing. Architecture of mobile processors of ARM. Programming in smartphones and applications. Network connectivity: Bluetooth. Cloud Computing. Connectivity on the cloud.

Prerequisites: CS221

Bibliography:

1. W. Woff, *Computers as Components: Principles of Embedded Computing System Design*, Morgan Kaufman.

Teaching methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory (2 hours weekly).

Assessment: Final exam, midterm exam and homework.

### ***CS429 Theory and Practice of Compilers***

Type: Restricted choice

Level: Undergraduate

Semester: Spring

Credit: 7,5 ECTS units

Instructor: .....

Objectives: Introduction to advanced techniques of compiler design and implementation.

Content: Fundamental principles of compiler design. Relation of translators to formal languages and automata theory. Lexical, syntactic and semantic analysis, code generation and optimization, etc. Practical exercises using lex and yacc.

Prerequisites: CS211, CS231

Bibliography:

1. V. Aho, R. Sethi and J. D. Ullman, *Compilers – Principles, Techniques, and Tools*, Addison-Wesley, 1986.

Teaching methods: Lectures (3 hours weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final exam, midterm exam and homework (theoretical and diagnostic assignments and semester project).

### ***CS431 Synthesis of Parallel Algorithms***

Type: Restricted choice

Level: Undergraduate

Semester: Spring

Credit: 7,5 ECTS units

Instructor: Ch. Georgiou

Objectives: Introduction to the fundamental techniques of parallel algorithm design and the use of these techniques in designing and analyzing parallel algorithms for basic problems. Introduction to the basic failure types appearing in parallel computing and the appropriate fault-tolerance techniques.

Content: Introduction to parallel computing. Complexity and efficiency measurements of parallel algorithms. Parallel computing models. Basic techniques for the design of parallel algorithms. Efficient parallel algorithms in Combinatorics, Graph Theory, and Matrix Theory. Complexity analysis of algorithms on the Parallel Random Access Machine (PRAM). Comparison between various models of computation. Advanced topics (fault-tolerance, atomicity, synchronization, computational limitations of PRAM).

Prerequisites: CS231

Bibliography:

1. J. Jaja, *An Introduction to Parallel Algorithms*, Addison-Wesley, 1992.
2. R. Miller and L. Boxer, *Algorithms Sequential & Parallel: A Unified Approach*, Prentice Hall, 2000.

Teaching methods: Lectures (3 hours weekly) and Recitation (1 hour weekly).

Assessment: Final exam, midterm exam and homework (theoretical assignments).

### **CS432 Distributed Algorithms**

Type: Restricted choice

Level: Undergraduate

Semester: Fall

Credit: 7,5 ECTS units

Instructor: .....

Objectives: Familiarization with the fundamental concepts of the Theory of Distributed Computing. Development of capabilities of designing, proving correct and analyzing distributed algorithms. Cultivation of syllogistic and mathematical approach to the field of distributed algorithms.

Content: Formal models of distributed computing: shared memory versus message passing, determinism versus randomization, concepts of synchronism, asynchrony and real-time. Design and analysis of distributed algorithms and impossibility/improbability results for fundamental problems such as mutual exclusion, consensus, synchronization, leader election, construction of minimum spanning trees. Fault tolerance: Byzantine generals, wait-free algorithms, fault degrees. Formal methods for proving correctness of distributed algorithms. Advanced topics. Special emphasis throughout the course on lower and upper bounds on time and memory.

Prerequisites: CS211, CS231

Bibliography:

1. H. Attiya and J. L. Welch, *Distributed Computing: Fundamentals, Simulations and Advanced Topics*, Second Edition, John Wiley and Sons, 2003.

Teaching methods: Lectures (3 hours weekly) and Recitation (1 hour weekly).

Assessment: Final exam, midterm exam, homework, participation in class and attendance.

### **CS433 Constraint Programming and Satisfaction**

Type: Restricted choice

Level: Undergraduate

Semester: Spring

Credit: 7,5 ECTS units

Instructor: Y. Dimopoulos

Objectives: A significant number of problems in Computer Science over a wide spectrum ranging from Computer Vision and Artificial Intelligence to the management of Computer Networks and Scheduling are special cases of Constraint Satisfaction problem. This course introduces the way to approach such problems and corresponding software. Students will be able to understand the structure and the behavior of Constraint Satisfaction problems and will get exposure to basic algorithms solving them. They will get experience over tools for Constraint Programming, the range of solvable problems and their applications to problem solving.

Content: Definition of constraint satisfaction problems. Constraint representation and complexity. Various forms of consistency. Backtracking and look-ahead techniques. Intelligent backtracking and condition for solution finding without backtracking. Heuristic and local methods for solution searching. Available commercial products. Study of problems from different application domains, their modeling and the complexity of various algorithms

solving them.

Prerequisites: CS111, CS231

Bibliography:

1. R. Dechter, *Constraint Processing*, Morgan Keuffmann, 2003.
2. E. Tsang, *Foundations of Constraint Satisfaction*, Academic Press, 1993.

Teaching methods: Lectures (3 hours weekly) and Recitation (1 hour weekly).

Assessment: Final exam, midterm exam and homework (programming assignments).

### **CS434 Logic Programming and Artificial Intelligence**

Type: Restricted choice

Level: Undergraduate

Semester: .....

Credit: 7,5 ECTS units

Instructor: A. Kakas

Language: English

Objectives: Familiarization with the basic concepts of Logic Programming and practical exercises in implementing them with the PROLOG language. Development of capabilities of applying Logic Programming to problems of Artificial Intelligence.

Content: Basic principles of Logic Programming and implementation using the language Prolog. Relation of Logic Programming to modern considerations regarding Artificial Intelligence. Solving application problems drawn from the fields of Artificial Intelligence and the Semantic Web, making use of Logic Programming and Constraint Logic Programming.

Prerequisites: CS111

Bibliography:

1. L. Sterling and E. Shapiro, *The Art of Prolog*, 2<sup>nd</sup> Edition, The MIT Press, 1994.
2. M. Bramer, *Logic Programming with Prolog*, Springer, 2009.

Teaching methods: Lectures (3 hours weekly) and Laboratory sessions (1 hour weekly).

Assessment: Final exam, midterm exam and homework.

### **CS435 Human Computer Interaction**

Type: Restricted choice

Level: Undergraduate

Semester: Fall

Credit: 7,5 ECTS units

Instructor: .....

Objectives: Appreciation of the importance of designing good user interfaces and the relation of user interface design and the way users interact with computers. Experience with applying a well-known methodology for designing interactive systems, starting from identifying user's needs, to applying usability evaluation methods.

Content: Analysis of the human as a computer system user (knowledge models, graphical animation, cognitive models). Interactive technologies (input-output devices, window environments, systems for collaborative support, virtual reality). Methodologies for the design of interactive systems.

Prerequisites: -----

Bibliography:

1. N. Αβούρης, *Εισαγωγή στην επικοινωνία ανθρώπου-υπολογιστή*, Εκδόσεις ΔΙΑΥΛΟΣ, Αθήνα, 2000.
2. J. Preece, Y. Rogers and H. Sharp, *Interaction Design: Beyond Human-Computer Interaction*, John Wiley and Sons, 2002.

Teaching methods: Lectures (3 hours weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final exam, midterm exam and homework.

### **CS441 Advanced Software Engineering**

Type: Restricted Choice

Level: Undergraduate

Semester: Spring

Credit: 7,5 ECTS units

Instructor: G. Papadopoulos

Language: English

Objectives: Familiarization and understanding of advanced principles, concepts and practices of software engineering. A number of contemporary areas of software engineering will be covered. This course further serves as a “roadmap” for advanced electives and graduate courses in software engineering.

Content: Software reuse. Distributed software engineering. Service oriented architectures. Real-time systems. Project Management. Human-Computer Interaction for Software Engineering (interaction design, design rules, implementation and evaluation, universal design, user support).

Prerequisites: CS343

Bibliography:

1. I. Sommerville, *Software Engineering*, 10<sup>th</sup> Edition, Addison-Wesley, 2016.
2. A. Dix, J. Finlay, G. D. Abowd, R. Beale, *Human Computer Interaction*, 3<sup>rd</sup> Edition, Prentice Hall, 2004.

Teaching methods: Lectures (3 hours weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final exam, midterm exam, homework (theoretical problems – study / analysis of a software system) and lab exercise.

### **CS442 Machine Learning**

Type: Restricted Choice

Level: Undergraduate

Semester: Fall

Credit: 7,5 ECTS units

Instructor: Ch. Christodoulou

Objectives: Familiarization with theoretical and practical issues involved in Machine Learning. Study of machine learning methods as they have been developed in recent years. Implementation and assessment of Machine Learning systems.

Content: Introduction to Pattern Recognition, Multilayered Neural Networks and backpropagation learning algorithm, Deep Learning and Convolutional Neural Networks, Recurrent Neural Networks, Self-Organising Maps, Radial Basis Functions, Reinforcement Learning, Hopfield Networks & Boltzmann Machines. Survey of the developments in artificial intelligence, machine learning, expert systems, cognitive science, robotics and artificial neural networks, which contributed to the development of the theory of machine learning systems.

Prerequisites: CS231

Bibliography:

1. C. M. Bishop, *Neural Networks for Pattern Recognition*, Oxford University Press, 1995.
2. S. Haykin, *Neural Networks and Learning Machines*, 3<sup>rd</sup> Edition, Prentice Hall, 2009.

Teaching methods: Lectures (3 hours weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final exam, midterm exam and homework (lab exercises).

### **CS443 Software Reuse**

Type: Restricted Choice

Level: Undergraduate

Semester: Winter

Credit: 7,5 ECTS units

Instructor: .....

Objectives: Understanding the usefulness of software reuse. Deepening in the different levels of reuse and understanding the differences between them. Use of software components in practice.

Content: Levels of reuse. Component-based development and composition. Best practices for reuse. Evolution of reuse. Software repositories. Search and retrieval. Design patterns. Object-oriented programming standards. Open source software. Open source licensing and legal issues. Organization policies and open-source based development. Outsourcing.

Model-Driven Engineering principles. Service-Oriented Computing. Aspect-Oriented Programming.

Prerequisites: CS233, CS343

Bibliography:

1. M. Ezran, M. Morisio, C. Tully, *Practical Software Reuse*, Practitioner Series, 2002.
2. E. Freeman, E. Robson, B. Bates, K. Sierra, *Head First Design Patterns*, O'Reilly Media, 2004.
3. C. Horstmann, *A Practical Guide to Open Source Licensing*, Wiley, 2<sup>nd</sup> Edition, 2006.

Teaching methods: Lectures (3 hours weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final and midterm exam, homework and semester project.

### **CS444 Computational Intelligent Systems**

Type: Restricted Choice

Level: Undergraduate

Semester: Spring

Credit: 7,5 ECTS units

Instructor: C.N. Schizas, Ch Christodoulou

Objectives: Global overview of Computational Intelligence and its applications in solving "real" problems in various disciplines such as decision making support, classification, prognosis and prediction, system optimization and recreational design. Moreover there will be an introduction to computational neuroscience/neuroinformatics as well as in cognitive science.

Content: Evolutionary Computing. Genetic Algorithms. Artificial Neural Networks. Fuzzy Systems. Artificial Life. Computational Neuroscience/Neuroinformatics; Hodgkin & Huxley and Integrate-and-Fire neuron models; Neural Coding; Hebbian Learning and Synaptic Plasticity; introduction to cognitive science. Development and Implementation of Computational Intelligence Systems.

Bibliography:

1. P. Engelbrecht, *Computational Intelligence: An Introduction*, John Wiley and Sons, 2nd edition 2007.
2. R. C. Eberhart and Y. Shi, *Computational Intelligence: Concepts to Implementations*, Elsevier, 2007.
3. E. R. Kandel, *Αναζητώντας τη Μνήμη*, (Μετάφραση Α. Καραμανίδης), Πανεπιστημιακές Εκδόσεις Κρήτης, 2008.
4. P. Dayan and L. Abbott, *Theoretical Neuroscience: Computational and Mathematical Modelling of Neural Systems*, MIT Press, 2001.

Teaching methods: Lectures (3 hours weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final exam, midterm exam and homework (laboratory exercises, additional exercises, final project).

### **CS445 Digital Image Processing**

Type: Restricted Choice

Level: Undergraduate

Semester: Fall

Credit: 7,5 ECTS units

Instructor: C. Pattichis

Language: English

Objectives: Introduction to the basic principles of Digital Image Processing: Digital Image and Video. Analysis and implementation of image and video processing and analysis algorithms and their application in industrial and biomedical systems. Content: Binary Image Representation. Image Histogram and Point Operations. Discrete Fourier Transform. Linear Image Filtering. Non Linear Image Filtering Pipeling. Image Compression. Image Analysis I. Image Analysis II. Digital Video Processing.

Prerequisites: CS132, MAS016

Bibliography:

1. R. C. Gonzalez and R. E. Woods, *Digital Image Processing*, 2<sup>nd</sup> Edition, Addison-Wesley, 2002.

Teaching methods: Lectures (3 hours weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final exam, midterm exam and homework (laboratory exercises, additional exercises, final project).

**CS446 Advanced Topics in Databases**

Type: Restricted Choice

Level: Undergraduate

Semester: Spring

Credit: 7,5 ECTS units

Instructor: D. Zeinalipour

Objectives: Familiarization with advanced topics in the design and management of Databases (and special kinds of those). Exposure to significant open problems and research directions in the field of Databases.

Content: Theoretical approach to logical and physical design of databases. Algorithms for logical and physical design of databases. Primary and secondary indexing techniques. Advanced query processing and query optimization. Query parallelism. Concurrency control and recovery, integrity and security of data. Distributed databases and introductory concepts distributed transaction processing involving multiple and heterogeneous databases. Problems of interfacing a database with software.

Prerequisites: CS342

Bibliography:

1. R. Ramakrishnan and J. Gehrke, *Database Management Systems*, 3<sup>rd</sup> Edition, McGraw-Hill, 2003.
2. R. Elmasri, S. B. Navathe, *Fundamentals of Database Systems*, 7<sup>th</sup> Edition, 2016.

Teaching methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1 hour weekly).

Assessment: Final exam, midterm exam, programming exercises and presentation.

**CS447 Computer Vision**

Type: Restricted Choice

Level: Undergraduate

Semester: Fall

Credit: 7,5 ECTS units

Instructor: .....

Objectives: .....

Content: Basic concepts and methodologies relating to the subject of Computer Vision. Image information, image processing, feature extraction. Image segmentation, clustering, multiple-image processing, case studies.

Prerequisites: CS231, MAS016

Bibliography:

1. D. Forsyth and J. Ponce, *Computer Vision: A Modern Approach*, Prentice-Hall, 2003.
2. R. Hartley and A. Zeisserman, *Multiple View Geometry*, Cambridge University Press, 2003.
3. C. Bishop, *Pattern Recognition and Machine Learning*, Springer-Verlag, 2007.
4. O. Faugeras and Q.T. Luong, *Geometry of Multiple Images*, MIT Press, 2001.
5. B. Horn, *Robot Vision*, MIT Press, Cambridge, Massachusetts, 1986.

Teaching methods: Lectures (3 hours weekly) and Laboratory sessions (1 hour weekly).

Assessment: Final exam, midterm exam, programming exercises and presentation.

**CS448 Data Mining on the Web**

Type: Restricted Choice

Level: Undergraduate

Semester: Spring

Credit: 7,5 ECTS units

Instructor: G. Pallis

Objectives: Introduction to data mining, Clustering, Classification, Association Rules, Link Analysis, Web communities, Web Personalization.

Content: Data mining on the Web refers to the automatic discovery of interesting and useful patterns from the data associated with the usage, content, and the linkage structure of Web resources. It has quickly become one of the most popular areas in computing and information systems because of its direct applications in e-commerce, information retrieval/filtering, Web personalization, and recommender systems. The primary focus of this course is on examining techniques from data mining to extract useful knowledge from Web data. This course will be focused on a detailed overview of the data mining process and techniques, specifically those that are most relevant to Web mining. Several topics will be covered such as Map-Reduce framework, Web data clustering, classification, association rules, recommendation systems, link analysis, social networks and Web advertising.

Prerequisites: CS231, CS342

Bibliography:

1. J. Ham and M. Kamber, *Data Mining: Concepts and Techniques*, Second Edition, Morgan Kaufmann, 2006.
2. Μ. Χαλκίδη και Μ. Βαζιργιάννη, *Εξόρυξη Γνώσης από Βάσεις Δεδομένων και Παγκόσμιο Ιστό*, Εκδόσεις Gutenberg, 2005.
3. A. Rajaraman and J.D. Ullman, *Mining of Massive Data Sets*, Stanford University Press, 2010.
4. B. Liu, *Web Data Mining: Exploring Hyperlinks, Contents and Usage Data*, Springer, 2007.

Teaching methods: Lectures (3 hours weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final exam, midterm exam, homework (programming and theoretical assignments) and semester project.

### **CS449 Professional Practice in Software Engineering**

Type: Restricted Choice

Level: Undergraduate

Semester: Spring

Credit: 7,5 ECTS units

Instructor: G. Kapitsaki

Language: English

Objectives: Embedding and practical application of the theoretical approaches and methodologies of Software Engineering for the development of a product-software system that serves the needs of an organization belonging to the local market. Practical use of processes and tools, such as central and distributed version control systems (SVN and GitHub), testing at different levels, group communication, professionalism, and ethical conduct.

Content: Undertake and carrying out to completion a significant software project by small student groups (of about 2-6 students each). All phases in the development of software. Some of the specific projects come from the industrial sector. Version control systems (SVN and GitHub). Testing. Software system analysis through software metrics. Specialized issues depending on the project nature (e.g., deployment on web servers, GUI tools and frameworks etc.).

Prerequisites: CS343

Bibliography:

1. Selected articles

Teaching methods: Students are grouped in teams of 2-6 persons. Meetings/ discussions are held regularly (weekly per team). Laboratory sessions (2 hours weekly).

Assessment: Assessment of the product-software system, assessment of the corresponding documentation, oral presentation and exam.

### ***CS481 Software Engineering for Software as a Service***

Type: Restricted Choice

Level: Undergraduate

Semester: .....

Credit: 7,5 ECTS units

Instructor: .....

Objectives: Understanding of advanced concepts of software engineering. Use of Agile software methodology with applications for cloud computing. Practice via the implementation of a software system. Regression testing.

Content: Agile development models. Version control systems. Software systems for Software as a Service (SaS). Test-driven development, user-centric design, refactoring and deployment. License compliance. Pair programming.

Prerequisites: CS343

Bibliography:

1. A. Fox, D. Patterson, *Engineering Software as a Service: An Agile Approach Using Cloud Computing*, 2014.
2. Selected articles from the literature.

Teaching methods: Lectures (3 hours weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final and midterm exam, homework and semester project.

### ***CS482 Software Validation, Verification and Quality***

Type: Restricted Choice

Level: Undergraduate

Semester: Spring

Credit: 7,5 ECTS units

Instructor: .....

Objectives: Teaching and assimilation of basic and specialized concepts on software validation and verification. Acquisition of knowledge for designing and implementing different types of audits and debugging procedures. Deepening in concepts and practices for ensuring quality in software systems.

Content: Basic concepts and terminology for validation and verification, reviews, inspections, control (parts, system combination, regression, acceptance, coverage criteria), control of specific categories of software systems, analyzing problems and documentation. Basic principles of quality factors and quality characteristics of software, methodologies, tools, quality procedures, quality standards, models and quality metrics, quality software production process, quality plan, organize quality assurance process, quality assessment process.

Prerequisites: CS343

Bibliography:

1. P. Jorgensen, *Software Testing, A Craftsman's Approach*, 3rd edition, Auerbach Publications, 2008.
2. P. Ammann and J. Offutt, *Introduction to Software Testing*, Cambridge University Press, 2008.
3. J. Tian, *Software Quality Engineering: Testing, Quality Assurance, and Quantifiable Improvement*, Wiley, 2005.
4. William E. Lewis, Gunasekaran Veerapillai, *Software Testing and Continuous Quality Improvement*, 3<sup>rd</sup> Edition, 2008.

Teaching methods: Lectures (3 hours weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final exam, midterm exam, homework and laboratory assignments.

### ***CS 483 Software Analysis, Modelling and Design***

Type: Restricted Choice

Level: Undergraduate

Semester: Spring

Credit: 7,5 ECTS units

Instructor: .....

Objectives: Deepening in fundamental concepts of software analysis, modelling and design. Design of effective, efficient and competitive software products. Training in software

architectures, notations, standards and methods.

**Content:** Fundamental concepts of software modeling (principles, conditions, properties), modeling languages, virtual models, model types. Early analysis (consistency, sufficiency, accuracy, quality). The role of models in the development and the connection with software development methodologies. Model-driven engineering. The role of software architecture in the software development lifecycle (user needs, design, implementation). The architectural design of a software system. Architectural representation.

**Prerequisites:** CS343

**Bibliography:**

1. K. Qian, X. Fu, L. Tao, C. Xu, *Software Architecture and Design Illuminated*, Jones and Bartlett Learning, 2010.
2. A. Kleppe, J. Warmer, W. Bast, *MDA Explained. The Model Driven Architecture: Practice and Promise*, Addison-Wesley Professional, 2003.
3. R.N. Taylor, N. Medvidovic and E.M. Dashofy, *Software Architecture*, Wiley, 2010.

**Teaching methods:** Lectures (3 hours weekly) and Laboratory sessions (2 hours weekly).

**Assessment:** Final exam, midterm exam, homework and laboratory assignments.

### **CS 495 Special Issues in Computer Science: Computational Complexity**

**Type:** Restricted Choice

**Level:** Undergraduate

**Semester:**-----

**Credit:** 7,5 ECTS units

**Instructor:** M. Mavronicolas

**Objectives:** Familiarization with the most basic (classic and modern) results of Computational Complexity Theory. Familiarization with connections between computational problems. Familiarization with the most important open issues in Complexity Computational Theory with a special emphasis on the main problem of P versus NP.

**Content:** Basic concepts of computational problems and algorithms. Algorithm models (e.g. Turing machine, logical circuit, RAM machine). Time and space complexity. Reduction. P, NP and co-NP classes. Theory of NP Completeness. P versus NP problem. Space classes NL, co-NL, L and PSPACE: their relations and their complete problems. Full search problems and TFNP class. PSPACE and PLS classes: their relations, their relative classes and their complete problems. Probabilistic classes (e.g. BPP, RP, ZPP). Polynomial Hierarchy and high classes (e.g. EXP and NEXP).

**Prerequisites:** CS211

**Bibliography:**

1. S. Arora και B. Barak, *Computational Complexity – A Modern Approach*, Cambridge 2009.
2. C.H. Papadimitriou, *Computational Complexity*, Addison-Wesley, 1993.
3. M. Sipser, *Εισαγωγή στη Θεωρία Υπολογισμού*, Πανεπιστημιακές Εκδόσεις Κρήτης, 2006.

**Teaching methods:** Lectures (3 hours weekly) and Recitation (1 hour weekly).

**Assessment:** Final exam, midterm exam, homework, and class attendance and participation.

### **CS 499 Special Issues in Computer Science: Mobile Computing Systems**

**Type:** Restricted Choice

**Level:** Undergraduate

**Semester:**Fall

**Credit:** 7,5 ECTS units

**Instructor:** .....

**Objectives:** Design and functional principles of modern mobile computing. Provide knowledge in mobile computing application design principles, development procedure, communication schema and usability. Development of skills and attitudes for the analysis, evaluation and development of fundamental mobile computing components.

**Content:** General review of operating systems. Mobile operating systems. Wireless networks and object oriented programming. Software design patterns. Android OS application

development procedure: application development framework, peripheral devices, database communication, user interface development, application publication and installation.

Prerequisites: CS233

Bibliography:

1. R. Meier, *Professional Android 2 Application Development*, Wiley Publishing, Inc. 2010.
2. B. Eckel, *Thinking in Java*, 4<sup>th</sup> Edition, Prentice Hall, 2006.
3. D. Gallardo, E. Burnette and R. McGovern, *Eclipse in Action. A guide for Java developers*, Manning, 2003.
4. C. Horstmann, *Object-Oriented Design and Patterns*, Wiley, 2<sup>nd</sup> Edition, 2006.
5. M. Fowler, *UML Distilled: A Brief Guide to the Standard Object Modeling Language*, Addison Wesley, 3<sup>rd</sup> Edition, 2000.
6. Επιλεγμένα άρθρα από τη διεθνή βιβλιογραφία.

Teaching methods: Lectures (3 hours weekly) and Recitation (1,5 hours weekly).

Assessment: Homework, group project and presentation, final exam, participation during lectures.

## ***Courses for Other Departments***

These courses are offered to students of other Departments. The content of such courses is suitably determined so that students in other disciplines may appreciate the significance of Computer Science, its relationship to other disciplines, and the potential benefits it offers. Each of the courses for other Departments carries 5, 6 or 7 ECTS units. The courses may be offered every semester or in parallel classes, depending on the needs and capabilities.

### **CS001 Introduction to Computer Science**

Type: Compulsory for the students of the departments of PSY and SPS

Unrestricted Choice (for students of other departments)

Level: Undergraduate

Semester: Fall and Spring

Credit: 6 ECTS units

Instructor: ..... (Fall) / ..... (Spring)

Objectives: Introduction to the basic concepts and the wide range of Computer Science. Familiarization and global update of students with the structure and use of computers, computer programs, the Internet and the application of Computer Science to other fields.

Content: The course aims to provide students with basic understanding of computer science concepts. The objective of the course is to introduce the students to the ‘modern’ research trends of the computer science field and the various applications of computer science in other areas. Furthermore, to allow students to appreciate the potentials of informatics and especially the web in their working environment. Students will also become aware of internet safety and malicious software and how they can protect themselves and their data at personal and professional level. Through the practical laboratory sessions, students will get familiar with various tools and software that considered vital for their academic and professional career. Specifically, the course will cover the following topics: Internet safety and malicious software, social networking, introduction to Web 2.0, search engines, social networking, bibliography and citation management tools.

Prerequisites: -----

Bibliography: -----

Teaching methods: Lectures (3 hours weekly) and Laboratory sessions (1.5 hours weekly).

Assessment: Final exam, midterm exam and homework (laboratory assignments).

### **CS002 Introduction to Computer Science**

Type: Compulsory for the students of the departments of EDU

Level: Undergraduate

Semester: Fall and Spring

Credit: 5 ECTS units

Instructor: .....

Objectives: Introduction to the basic concepts and the wide range of Computer Science. Familiarization and global update of students with the structure and use of computers, computer programs, the Internet and the application of Computer Science to other fields.

Content: Fundamentals of Computer Science, the main historical events which have contributed in its development, and the possibilities it offers. Basic constituent elements of Computer Science and methods for making it valuable to other sciences and applications. Practical experience with application packages, and the UNIX environment. Basic principles of programming in a fourth generation language.

Prerequisites: -----

Bibliography:

1. B. A. Forouzan, *Εισαγωγή στην Επιστήμη των Υπολογιστών*, Εκδόσεις “ΚΛΕΙΔΑΡΙΘΜΟΣ”, 2003.

Teaching methods: Lectures (3 hours weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final exam, midterm exam and homework (laboratory assignments).

### ***CS003 Computer Science and Information Systems***

Type: Compulsory for the students of the departments of ECO and PBA

Level: Undergraduate

Semester: Fall and Spring

Credit: 6 ECTS units

Instructor: ..... (Fall) / ..... (Spring)

Objectives: Familiarization with the most basic concepts in Computer Science, Information Systems and Computer Systems. Touch with the current trends in the practice of Computer Science. Practical experience in the use of various software packages that are useful in the academic and professional worlds.

Content: The course aims to provide students with basic understanding of computer science concepts. The objective of the course is to introduce the students to the ‘modern’ research trends of the computer science field and the various applications of computer science in other areas. Furthermore, to allow students to appreciate the potentials of informatics and especially the web in their working environment. Students will also become aware of internet safety and malicious software and how they can protect themselves and their data at personal and professional level. Through the practical laboratory sessions, students will get familiar with various tools and software that considered vital for their academic and professional career. Specifically, the course will cover the following topics: Internet safety and malicious software, social networking, introduction to Web 2.0, search engines, introduction to cloud computing , introduction to databases, introduction to web design, advanced excel (excel statistics and economical formulas), data visualisation, social networking for commercial and marketing purposes.

Prerequisites: -----

Bibliography: -----

Teaching methods: Lectures (3 hours weekly) and Recitation/Laboratory sessions (1.5 hours weekly).

Assessment: Final exam, midterm exam and homework.

### ***CS011 Introduction to Information Society***

Type: Unrestricted Choice (for students of other departments)

Level: Undergraduate

Semester: .....

Credit: 6 ECTS units

Instructor:.....

Objectives: Familiarization with the most prominent concepts and applications of Information Society.

Content: Presentation of the formed framework for Information Society (IST). Basic concepts and constituent elements of IST, and the wider context for its application. Issues such as electronic government, telematics, digital business, electronic commerce, telemedicine, etc. Effects of IST on society and economy.

Prerequisites: -----

Bibliography:

1. B. A. Forouzan, *Εισαγωγή στην Επιστήμη των Υπολογιστών*, Εκδόσεις “ΚΛΕΙΔΑΡΙΘΜΟΣ”, 2003.

Teaching methods: Lectures (3 hours weekly).

Assessment: Final exam and homework (individual midterm project and final group project).

### ***CS012 Web Design Technologies***

Type: Unrestricted Choice (for students of other departments)

Level: Undergraduate

Semester: Spring

Credit: 6 ECTS units

Instructor:.....

Objectives: (a) basic concepts of the Internet and the WWW, (b) well-know technologies for designing and developing websites and (c) the use of specialized web development software.

Content: Introduction to the Internet and the WWW. Web design and development technologies. Web servers and HTTP, HTML, XHTML, CSS, Javascript. User interface design guidelines. Usability evaluation.

Prerequisites: -----

Bibliography:

1. Σ. Ρετάλης και Γ. Τσέλιος, *HTML: Μαθήματα από το Απλό στο Σύνθετο*, Εκδόσεις Καστανιώτη, 2003.

Teaching methods: Lectures (3 hours weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final exam, midterm exam and homework.

### ***CS013 History and Philosophy of Computation***

Type: Unrestricted Choice (for students of other departments)

Level: Undergraduate

Semester: Spring

Credit: 6 ECTS units

Instructor: A. Kakas

Objectives: Basic understanding of the foundational motion of computation, Computational machine and intelligence through their historical evolution. Theoretical and practical understanding of the automation of computation. Understanding of the relationship between computing and human intelligence.

Content: Foundational motions of computation, complexity, computational machine, algorithm, programming language, knowledge and intelligence. Basic computational models and their corresponding problems. Historical development of computers and their theoretical basis. The scientific and engineering character of computer science. The relation of computer science to other disciplines such as mathematics, physics, psychology and biology. Computing today over the internet and its future development. Artificial intelligence and machines with intelligent behavior. The human brain and mind as computing machines. Automation of logic and argumentation. Natural language as a computing language.

Prerequisites: -----

Bibliography:

1. L. Floridi, *Guide to the Philosophy of Computing and Information*, Backwell 2004.
2. Selected articles from the Journal of Minds and Machines.

Teaching methods: Lectures (3 hours weekly) and Tutorial sessions (1 hour weekly).

Assessment: Final exam and homework.

### ***CS031 Introduction to Programming***

Type: Compulsory for students of MAS Department

Level: Undergraduate

Semester: Spring

Credit: 7 ECTS units

Instructor: .....

Objectives: Introduction of the basic principles of programming with emphasis on structured programming, abstraction, and the design, implementation, checking and debugging of modular programs. Application of these principles using the FORTRAN 90/95 programming

language.

Content: Computers and binary system. Hardware and software. Program development cycle, algorithms and flow diagrams. Alphabet and syntax of FORTRAN. Operators. Selection structures and loops. Arrays. Functions and subroutines. Recursion. Formatted input-output. Files. Dynamic data.

Prerequisites: -----

Bibliography:

1. Δ. Ματαράς και Φ. Κουτελιέρης, *Προγραμματισμός Fortran 90/95 για Επιστήμονες και Μηχανικούς*, Εκδόσεις ΤΖΙΟΛΑ, 2003.
2. L. Nyhoff and S. Leestma, *Introduction to Fortran 90*, Prentice Hall, 1999.

Teaching methods: Lectures (3 hours weekly), Laboratory sessions (1 hour weekly) and Recitation (1 hour weekly).

Assessment: Final exam, midterm exam, homework (theoretical and programming assignments) and quizzes.

### **CS032 Introduction to Computer Science & Information Systems**

Type: Compulsory (for the students of the departments of ECO and PBA)

Level: Undergraduate

Semester: Spring

Credit: 6 ECTS units

Instructor: .....

Objectives: Programming is examined as a problem-solving method. In particular the course presents the fundamentals of algorithmic thought and the implementation thereof through a programming language. Also, a high level programming language is introduced. Upon completion of the course students are expected to be able to cast problem solutions into an algorithmic form, and will have obtained a basic exposure to a widely used programming language such as C or Python.

Content: Introduction to the principles of programming with emphasis on structured programming, abstraction, and the design, implementation, checking and debugging of modular programs. Mastering the material through laboratory exercises in the C programming language.

Prerequisites: -----

Bibliography:

1. W. F. Punch and R. Enbody, *The Practice of Computing Using Python*, Second Edition, Addison-Wesley, 2013..

Teaching methods: Lectures (3 hours weekly) and Recitation/Laboratory sessions (1.5 hours weekly).

Assessment: Final exam, midterm exam and homework.

### **CS033 Introduction to Programming for Engineers**

Type: Compulsory for students of the Department of CEE

Level: Undergraduate

Semester: Fall

Credit: 5 ECTS units

Instructor: .....

Objectives: Introduction of methods for problem-solving through programming. Provision of deep understanding of basic programming principles and algorithmic techniques, design, implementation, testing and debugging of modular programs. Application of the basic principles using the C programming language.

Content: Basic principles of programming with emphasis on structured programming, abstraction, and the design, implementation, checking and debugging of modular programs. Mastering of the material through laboratory exercises in a traditional programming language such as C.

Prerequisites:-----

Bibliography:

1. J. R. Hanly and E. B. Koffman, *C Program Design for Engineers*, Second Edition, Addison-Wesley, 2001.

Teaching methods: Lectures (3 hours weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final exam, midterm exams and homework (including programming assignments).

### ***CS034 Introduction to Programming for Electrical and Computer Engineers***

Type: Compulsory for students of the Department of ECE

Level: Undergraduate

Semester: Spring

Credit: 7 ECTS units

Instructor: .....

Objectives: Introduction of methods for problem-solving through programming. Development of procedural problem solving skills and algorithmic thinking. Provision of deep understanding of basic programming principles and algorithmic techniques, design, implementation, testing and debugging of modular programs. Understanding the important concepts such as program abstraction and data abstraction. Mastering of a high-level programming language (C).

Content: Introduction to computers and programming languages. Problem solving and programming, problem specification, algorithms and programs, modular programming, program and data abstraction. Software development process, top-down design, problem decomposition, reuse, trial and debugging. Variables: names, values, addresses, basic types (numbers, characters, logical values), operators and expressions, constants, library usage. Input/Output operations. Procedures (functions), parameters, calls, value or address referral. Program flow, variables' scope, lifecycle of variables/function calls, program's state. Procedural programming, algorithmic structures (sequence, selection, loop, recursion), memory. Synthesized and enumerated data types, arrays (vectors and multidimensional), structures, pointers (variables of pointer type, address and indirect referral operators, arrays and pointers and functions). Introduction to dynamic memory allocation.

Prerequisites:-----

Bibliography:

1. J. R. Hanly and E. B. Koffman, *Problem Solving and Program Design in C*, Fourth Edition, Addison-Wesley, 2003.
2. B. W. Kernighan and D. M. Ritchie, *Η Γλώσσα Προγραμματισμού C*, 2<sup>nd</sup> Edition, Εκδόσεις ΚΛΕΙΔΑΡΙΘΜΟΣ, 1990.

Teaching methods: Lectures (3 hours weekly), Laboratory sessions (2 hours weekly) and Recitation (1 hour weekly).

Assessment: Final exam, midterm exams and homework (programming assignments) and quizzes.

### ***CS035 Data Structures and Algorithms for Electrical and Computer Engineers***

Type: Compulsory for students of the Department of ECE

Level: Undergraduate

Semester: Fall

Credit: 7 ECTS units

Instructor: .....

Objectives: This course studies methods of efficient organization and manipulation of data, complexity analysis of algorithm design techniques. The main objectives of the course are to familiarize students with data structures and their associated algorithms, techniques for evaluating the complexity of algorithms, and the development of skills for efficient algorithm design and implementation.

Content: Advanced programming techniques based on the programming language C: Recursion, Structures, Pointers, File and Memory management. Data types and abstract data types. Algorithm complexity analysis: worst-case and average-case analysis. Linear data structures: List, Stack and Queue, using static and dynamic memory allocation methods. Applications of linear data structures. Sorting algorithms: SelectionSort, InsertionSort, MergeSort, QuickSort and BucketSort. Tree data structures: Binary Trees, Binary Search Trees, Balanced Trees, B-trees. Priority Queues and Heaps. Graphs: definitions, data structures, topological sorting algorithms, graph traversal algorithms. Hashing techniques,

hash functions and collision resolution techniques.

Prerequisites: CS034

Bibliography:

1. R. F. Gilberg and B. A. Fourouzan, *Data Structures: A Pseudocode Approach with C*, 2<sup>nd</sup> Edition, Thomson Publishing, 2005.
2. K. N. King, *C Programming: A Modern Approach*, 2<sup>nd</sup> Edition, W. W. Norton & Company, 2008.
3. Νικόλαος Μισυρλής, *Δομές Δεδομένων με C*, 2002.
4. Mark Allen Weiss, *Data Structures and Algorithm Analysis in C*, Addison Wesley, 1996.

Teaching methods: Lectures (3 hours weekly), laboratory sessions (2 hours weekly) and tutorials (1 hour weekly).

Assessment: Final exam, midterm exam and homework (theoretical and programming assignments)

### **CS041 e-Health and Medical Informatics**

Type: Compulsory for students of the Medical School

Level: Undergraduate

Semester: Fall

Credit: 6 ECTS units

Instructor: Ch. Schizas

Objectives: Introducing the doctor of the future to the new world order of electronic health (e-health) and medical informatics at local, European and international level. Consolidating the legislative and social framework of e-health. Explaining and appreciating the patient-centric approach to medical practice as a prerequisite for successful implementation of e-health. Exploitation of the potential offered by information and communication technologies in medicine and clinical practice, particularly through the modeling of medical practice, procedures and knowledge. Appreciating the importance of the available medical data for making e-health a reality.

Content: Introduction to the e-health environment and the appropriate operating framework. Legislative regulatory and social background needed for its materialization. The importance of information technology in extracting useful information from vast medical databases. Applications of computer systems used for the movement of medical knowledge, medical information management, proper use of a citizen's electronic folder for patients and support a medical decision. Reference to the legal framework that regulates the medical practice, in accordance with European and international directives.

Prerequisite: -----

Bibliography: no book that covers all material expected to be taught in the course exists. Extensive use of the Internet will be recommended, even in the classroom. The following books are recommended.

1. D. Koutsouris, S. Pavlopoulos, A. Prentza, *Introduction to Biomedical Engineering and Systems Analysis*, Publisher: Tziola, 2003.
2. E. H. Shortliffe, J. J. Cimino (Eds.), *Biomedical Informatics: Computer Applications in Health Care and Biomedicine*, Springer Verlag; 3<sup>rd</sup> edition, 2006.

Teaching methods: Lectures/presentations (3 hours weekly), tutorial (1 hour weekly), discussions/presentations. Structured visits to hospital clinics for data collection and exploitation as to how these can be used by the medical staff.

Assessment: Written exams (midterm and final), essays (studies and/or exercises).

### **CS042 eHealth Seminars**

Type: Compulsory for students of the Medical School

Level: Undergraduate

Semester: Spring

Credit: 2 ECTS units

Instructor: Ch. Schizas

Objectives: Familiarization with the information and communication technologies (ICT) and their practical application in medicine and the medical environment. Acquiring of knowledge through eHealth practices adopted in real life by the distinguished presenters of the seminars.

Study through videos practices in real environments such as, the intensive care unit, laparoscopic operations, robotic assisted operations, teleradiology, teleconsultation; appreciation of the importance of medical databases. Understanding of what is coming up in future medicine, considering that ICT will continue to grow and offer its services to the medical profession.

Content: Selected presentations/demonstrations by at least six medical experts selected from Cyprus or abroad according to their availability. Teleconferencing may be used for real life presentations and communication with the selected presenters.

Prerequisite: CS041

Bibliography: no book that covers all material expected to be taught in the course exists. Relevant bibliography will be provided by the presenters of the seminars and the Instructor of the course.

Teaching methods: Lectures/presentations (1.5 hours biweekly). Structured visits to hospital clinics in coordination with the presenters and the Medical School.

Assessment: Written e-exam, assignments (one individual and one group assignment).

## ***Post Graduate Program of Studies***

The postgraduate programme of studies leads to Master and Ph.D. Degrees in Computer Science.

The post graduate studies in the Department are governed by Corresponding Rules of Post Graduate Studies, approved by the Senate (149th meeting 22/5/2002). These rules are included in the Appendix B of this guide. Also in Appendices C and D present the specifications to be met by the final form of the Master and Ph.D. dissertations, respectively.

### ***Masters Programs***

The Department of Computer Science, since the academic year 2009-2010, offers the following four Master Programmes:

1. Master in Computer Science (MCS)
2. Master in Internet Computing (MIC)
3. Master in Intelligent Systems (MIntS)
4. Professional Master in Advanced Information Technologies (PM).

Since 2017-2018 the Department offers in collaboration with the Open University of Cyprus and the Department of Psychology of the University of Cyprus the following

5. Master Program: Master in Cognitive Systems

Since 2012-2013 the Department offers in collaboration with the Department of Communication and Internet Studies of the Cyprus University of Technology (CUT) the following Master Program:

1. Master in Computer Games (MCG)

In accordance with the ECTS System, successful completion of at least 90 ECTS is required for obtaining a Master Degree at the postgraduate level with the exemption of the Professional Master in Advanced Information Technologies that requires successful completion of at least 75 ECTS.

To be admitted to a Master programme, a candidate must have a first degree in Computer Science or a related subject from an accredited university with an overall grade of “Very Good”. Any relevant industrial experience may be considered as an additional advantage.

In the Master Programs that include a Master Thesis, the thesis should be submitted upon completion to the digital library of the University of Cyprus, Lekythos (<https://lekythos.library.ucy.ac.cy/?locale-attribute=en>). A brief description of these four masters:

#### ***1. MASTER in COMPUTER SCIENCE***

The Master Programme in Computer Science is designed primarily for Computer Science and other science-related graduates who seek to develop research skills and enhance their knowledge in advanced areas of Computer Science. Students who attend this programme may pursue a PhD degree after their graduation.

The completion of the programme requires 90 ECTS, and the duration of studies should be at least three semesters. These 90 credits correspond to eight courses and a Master thesis. More specifically:

- Seven postgraduate courses of 8 ECTS each (any seven from the postgraduate course list with the supervision of the Academic Advisor)
- One postgraduate course of 4 ECTS (CS670 Research Methodologies and Professional Practices in Computer Science)
- Master Thesis worth of 30 ECTS.

The seven graduate courses must be from the graduate course catalogue of the Department. Each student selects these courses with the guidance of the academic advisor.

In case a student successfully complete at least four courses from the specialized Master Direction of the Department then the student may transferred to the corresponding Specialized Master where will receive his diploma.

## **2. MASTER in INTERNET COMPUTING**

The Master Programme in Internet Computing is designed primarily for Computer Science and other science-related graduates who seek to deepen their knowledge on subjects like Communication Networks, Distributed Systems and the Internet to develop research skills in these subjects and, potentially, pursue a doctoral degree after their graduation.

The completion of the programme requires 90 ECTS and study duration of at least three semesters. These 90 credits correspond to eight courses and a Master thesis. More specifically:

- Seven postgraduate courses of 8 ECTS, out of which 4 should be related to the area of Internet Computing (identified as such in the Table of Specialization Courses and in the course descriptions).
- One postgraduate course of 4 ECTS (CS670 Research Methodologies and Professional Practices in Computer Science)
- Master Thesis worth of 30 ECTS (the topic of the thesis must be related to the scope of the programme: Internet, Communication Networks, Distributed Computing, etc.)

## **3. MASTER in INTELLIGENT SYSTEMS**

The Master in Intelligent Systems is designed for Computer Science and other science-related graduates who seek to deepen their knowledge in areas like Artificial Intelligence and Computational and Data Mining Systems, to develop research skills in these subjects and, potentially, follow doctoral studies after their graduation.

The completion of the program requires 90 ECTS and the duration of studies should be at least threesemesters. These 90 credits correspond to eight courses and a thesis. More specifically:

- Seven postgraduate courses of 8 ECTS, out of which 4 must be relevant to the area of Intelligent Systems (identified as such in in the Table of Specialization Courses and in the course descriptions)
- One postgraduate course of 4 ECTS (CS670 Research Methodologies and Professional Practices in Computer Science)
- Master Thesis worth of 30 ECTS (the topic of the thesis must be related to the scope of the programme: Artificial Intelligence, Computational Knowledge Mining Systems, etc.)

## **4. MASTER in ADVANCED INFORMATION TECHNOLOGIES (PROFESSIONAL)**

The aim of the Professional Master in Advanced Information Technologies is to help Information Technology professionals to extend and update their knowledge in Advanced

Computer Technologies and to acquire up-to-date know-how in subjects related to the national Information Technology industry like Software Engineering, the Internet, and Intelligent Systems.

The completion of the course requires 90 ECTS and the duration of studies must be at least four semesters. In particular:

- Nine postgraduate courses of 8 ECTS, out of which 4 should be related to the programme's scope (identified as such in the Table of Specialization Courses and in the course descriptions)
- One postgraduate course of 4 ECTS (EPL 670 Research Methodologies and Professional Practices in Computer Science)
- Master Thesis worth of 15 ECTS, which can be replaced with two extra postgraduate courses.

The needs of employees and professionals in the Information Technology industry will be considered during the scheduling of courses (afternoon and evening courses and three-hour meetings).

### ***5. MASTER in COGNITIVE SYSTEMS***

This is a distance-learning program taught exclusively on-line in collaboration with the Open University of Cyprus and the Department of Psychology of the University of Cyprus. The program will be taught in English.

Cognitive systems form a new generation of systems that aim to collaborate with their users at a level cognitively compatible with a non-computing expert in order to provide personalized and adaptive services, with each party, system and human, learning and adapting to the capabilities of the other. The need for developing such cognitive systems has been widely recognized. The Watson machine opened up the area of Cognitive Computing and we see today the development of the first Cognitive Assistants such as Siri, Cortana, Alexa, Google Assistant and others from every major computing company in the world.

Students are required to take:

- the three first courses under the Foundations theme (COS511, COS512, COS513), where at least the two introductory courses (COS511, COS512) are expected to be taken during the first semester.
- electives among all other courses, as long as at least one third of the courses comes from Cognitive Psychology (CP), and one third of the courses come from Computer Science (CS).

Full information about the program and how to apply can be found at: <http://cogsys.ouc.ac.cy>

### ***6. MASTER in DESIGN AND DEVELOPMENT OF COMPUTER GAMES AND INTERACTIVE TECHNOLOGIES***

The master program in Design and Development of Computer Games and Interactive Technologies is jointly awarded by the University of Cyprus (Department of Computer Science) and the Cyprus University of Technology (Department of Multimedia & Graphic Arts). Rapid developments in interactive technologies – especially entertainment technologies - as well as the broad use of interactive virtual environments and computer games, for both entertainment and other purposes (e.g. education, information dissemination etc) are indisputable. The proper design and effective development of such applications require in-depth study and sound understanding of the context of respective scientific areas.

Upon graduation, students will have excellent knowledge and skills for/in:

- Analysis of requirements for the design of electronic games and interactive technologies
- Interactive design in computer games and interactive
- Design and development of 3D virtual environments
- Development of computer games and 3D interactive virtual environments
- Design and development of computer games for specific application domains (i.e. learning, education and information).
- Development of 3D interactive simulators (i.e. driving simulators, flight simulators etc.)
- Use a range of software for computer games development and interactive technologies integration (i.e. virtual reality systems, motion tracking equipment).

The following is the structure of the master program.

**1° semester** (three out of the following five courses, students with a limited background in Computer Science may be asked to attend the course CS131 Programming Principles )

MGA 511 Human- Computer Interaction (7.5 ECTS)  
 MGA 520 3D modelling for Interactive Applications (7.5 ECTS) - CS 607 Graphic and Visual Computation (8 ECTS)  
 CS 131 Introduction to Programming  
 Elective Course

**2° semester**

MGA 518 Games Design (7.5 ECTS)  
 CS 653 Software engineering for Computer Games (8 ECTS)  
 Elective Course  
 Elective Course

**3° semester**

MGA 580/ CS 700 Master Thesis\*

\* Compulsory after successful completion of the rest courses

**Elective courses (Winter semester)**

CS 604	Artificial Intelligence	8 ECTS
MGA 699	Special Topics in Design	
CS 699	Special Topics in Computer Science	8 ECTS

And any of other courses offered by other postgraduate programmes of the two departments and are related to the master program.

**Elective courses (Spring semester)**

MGA 515	Creative Technologies	7.5 ECTS
MGA 519	Virtual reality	7.5 ECTS
MGA 699	Special Topics in Design	
CS 656	Computer Graphics: Modelling and Realism	8 ECTS
CS 658	Digital Video Processing	8 ECTS
CS 668	Computer Vision	

CS 699	Special Topics in Computer Science	
BUS 434	Entrepreneurship	

And any of other courses offered by other postgraduate programmes of the two departments and are related to the master program.

**Table 2: Specialization Courses in Graduate Programs**

Course Code and Title	Master in Computer Science <sup>1</sup>	Master in Internet Computing	Master in Intelligent Systems	Professional Master
CS601 – Distributed Systems	√	√		
CS602 – Foundations of Web Technologies	√	√		√
CS603 – Advanced Software Engineering	√			√
CS604 – Artificial Intelligence	√		√	
CS605 – Advanced Computer Architecture	√			√
CS606 – Computer Networks and the Internet	√	√		√
CS607 – Visual Computing	√			√
CS646 – Advanced Topics in Databases	√	√		√
CS651 – Mobile Computing and Data Management	√	√		√
CS653 – Computer Networks	√		√	√
CS655 – Advanced Parallel Processing II	√			√
CS656 – Computer Graphics - Modelling and Realism	√			√
CS657 – Wireless Networks	√	√		
CS658 – Digital Video Processing	√		√	
CS659 – Design with Embedded Processors	√			√
CS660 – Information Retrieval and Search Engines	√	√	√	
CS662 – Machine Learning and Data Mining	√		√	√
CS663 – Computational Logic	√		√	
CS664 – Systems Analysis and Verification	√			
CS665 – Constraint Solving Methods	√		√	
CS667 – Neuroinformatics	√		√	
CS668 – Mechanical Vision	√			√
CS673 – Algorithmic Game Theory	√	√		
CS674 – System and Network Security	√	√		√
CS675 – Web Services and Service Oriented Computing	√	√		√
CS679 – Electronic Health	√		√	√
CS680 – Cognitive programming	√	√	√	
CS681 – Advanced Topics in Software Reuse	√	√		√
CS682 – Advanced Security Topics	√			√
CS699 – Special Topics in Computer Science	√			
<b>Courses from other Departments</b>				
ECE621 – Random Processes		√		
ECE635 – Optimization Theory and Applications		√		
ECE658 – Computer Systems’ Performance Evaluation and Simulation		√		

<sup>1</sup> No specialization courses exist. All courses are eligible.

## ***Short Course Description***

For the current academic year 2018-2019, each course description includes the name of the instructor, however, for the restricted courses that are not offered for the current academic year, 2018-2019, the name of the instructor who suggested the course is included. The language of instruction for all courses is Greek.

### ***CS601 Distributed Systems***

Type: Specialisation Course for MIC and Restricted Choice for MCS, MIntS, PM

Level: Graduate

Semester: Fall

Credit: 8 ECTS units

Instructor: Ch. Georgiou

Objectives: Familiarization with fundamental concepts and principles of distributed systems in both breadth and depth. Development of capabilities of designing, analyzing and programming distributed systems.

Content: Basic concepts and principles of distributed systems. Communication, processes and synchronization. Naming. Distributed file systems and distributed operating systems. Security and cryptography in distributed systems. Distributed shared memory and its consistency. Fault-tolerance. Distributed algorithms and distributed programming. Design and development of applications in distributed environments. Case-studies of specific distributed systems (eg. PlanetLab). Practical exposition with programming project or programming exercises.

Prerequisites: -----

Bibliography:

1. A. S. Tanenbaum and M. van Steen, *Κατανεμημένα Συστήματα: Αρχές και Υποδείγματα*, Εκδόσεις Κλειδάριθμος, 2005.  
(English Version: A. S. Tanenbaum and M. van Steen, *Distributed Systems: Principles and Paradigms*, Pearson Education, Second Edition, 2007).
2. G. Goulouris, J. Dollimore and T. Kindberg, *Distributed Systems - Concepts and Design*, Fourth Edition, Addison-Wesley, 2005.

Teaching methods: Lectures (3 hours weekly) and Recitation/Laboratory Lecture (2 hours weekly).

Assessment: Final exam, midterm exam and homework (programming assignments).

### ***CS602 Foundations of Web Technologies***

Type: Specialisation Course for MIC, PM and Restricted Choice for MCS, MIntS

Level: Graduate

Semester: -----

Credit: 8 ECTS units

Instructor: M. Dikaiakos

Objectives: To provide students with an advance introduction to the foundations and principles of the world wide web. To examine selected topics in web technologies from the recent research literature.

Content: Web Architecture. Web Protocols. Markup Languages. Web Characterization. Search Engines. Service-provision Infrastructures.

Prerequisites: -----

Bibliography:

1. R. Krishnamurthy and J. Rexford, *Web Protocols and Practice*, Addison-Wesley, 2001.
2. M. Hofmann and L.R. Beaumont, *Content Networking: Architecture, Protocols and Practice*, Morgan Kaufman, 2005.

Teaching methods: Lectures (3 hours weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final exam, midterm exam, homework and class participation.

### **CS603 Advanced Software Engineering**

Type: Specialisation Course for PM and Restricted Choice for MCS, MIC, MIntS

Level: Graduate

Semester: Fall

Credit: 8 ECTS units

Instructor: .....

Objectives: Familiarization with advanced topics in Software Engineering with emphasis on two main axes: (1) Principles of designing and implementing component-based systems on the basis of modern techniques of development such as component-based software, software architectures and middleware-platforms. (2) Special topics on the development of software, such as requirements engineering, real-time software systems, and software cost estimation.

Content: Topics in Component-Based Software: Principles of development of component-based systems based on component-based software. Modeling techniques. Software architectures. Coordination programming. Middleware platforms for the development of systems. Software composition. Elements of the distributed programming. Configuration management. Advanced topics in Software Engineering: Requirements Engineering Processes. Real-time Software Design. Design with Reuse. User Interface Design. Software Change.

Prerequisites: Undergraduate course equivalent to the CS343 (Software Engineering)

Bibliography:

1. C. Szyperski, *Component Software: Beyond Object-Oriented Programming*, 2<sup>nd</sup> Edition, Addison-Wesley, 2002.
2. I. Sommerville, *Software Engineering*, 9<sup>th</sup> Edition, Addison-Wesley, 2011.

Teaching methods: Lectures (3 hours weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final exam and homework (group projects).

### **CS604 Artificial Intelligence**

Type: Specialisation Course for MIntS and Restricted Choice for MCS, MIC, PM

Level: Graduate

Semester: Fall

Credit: 8 ECTS units

Instructor: Y. Dimopoulos and Ch. Christodoulou

Objectives: Introduction to the fundamental principles, algorithms and techniques that support the operation of intelligent information systems. Upon completion of the course, the students should know the state of the art in Computational or Artificial Intelligence, the main problems under investigation in these areas, and the basic methods used for solving them.

Content: Introduction to Artificial Intelligence. Topics in Constraint Satisfaction. Satisfiability and Optimization in Logic. Answer Set Programming. Topics in Machine Learning, Data Mining, and Reasoning under Uncertainty. Introduction to Artificial Neural Networks. Single layer and Multi layer Perceptrons. Backpropagation learning algorithm. Deep Learning and Convolutional Neural Networks. Recurrent Neural Networks. Self-organizing Maps. Radial-basis Function Networks. Reinforcement Learning. Hopfield Neural Networks and Boltzmann Machines.

Prerequisites: -----

Bibliography:

1. S. Russel and P. Norvig, *Artificial Intelligence: A Modern Approach*, Second Edition, Prentice Hall, 2002.
2. S. Haykin, *Neural Networks and Learning Machines*, 3<sup>rd</sup> Edition, Pearson Education, 2009.

Teaching methods: Lectures (3 hours weekly) and Recitation (2 hours weekly).

Assessment: Final exam, midterm exam and homework.

### **CS605 Advanced Computer Architecture**

Type: Specialisation Course for PM and Restricted Choice for MCS, MIC, MIntS

Level: Graduate

Semester: Fall

Credit: 8 ECTS units

Instructor: Y. Sazeidis

Objectives: Students will learn: (a) current methodology for performance evaluation and comparison of computer systems; (b) basic and advanced concepts in the organization of modern microprocessors; and (c) current trends in the computer architecture area. Also, with the use of different tools, presented in the course, students will perform research projects in certain computer architecture topics.

Content: Performance evaluation and comparison, as well as benchmarking programs; Basic microarchitecture concepts of modern processors; Pipelining, instruction-level parallelism, prediction, speculation, memory hierarchy, and static/dynamic instruction scheduling; Examples of modern processors; Current research projects in the area of computer architecture.

Prerequisites: Undergraduate course equivalent to the CS221 (Computer Organization and Assembly Programming) and undergraduate course equivalent to the CS222 (Operating Systems).

Bibliography:

1. J. Hennessy and D. Patterson, *Computer Architecture: A Quantitative Approach*, 3<sup>rd</sup> Edition, Morgan Keuffmann, 2002.
2. Selected research articles from the international literature.

Teaching methods: Lectures (3 hours weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final exam, midterm exam, homework (final project, intermediate assignments), class participation and brief presentation.

### ***CS606 Computer Networks and the Internet***

Type: Specialisation Course for MIC, PM and Restricted Choice for MCS, MIntS

Level: Graduate

Semester: Fall

Credit: 8 ECTS units

Instructor: V. Vassiliou

Objectives: Understanding (at a graduate level) of the basic concepts and matters regarding Computer Networks and the Internet. Familiarization with modern views of Computer Networks and exposure to the related open research problems.

Content: Introduction to Internet and Networking Technologies. TCP/IP suite of protocols, Quality of Service (QoS), New Networking Architectures. Protocols and Standards (e.g. DiffServ, IPv6, MPLS). Network Performance Evaluation (e.g. queueing theory, and simulation tools). Traffic Modeling and Traffic Engineering. Congestion Control and Resource Allocation. Network Design and Optimization.

Prerequisites: Undergraduate course equivalent to the CS324 (Communications and Networks)

Bibliography:

1. L. Peterson and B. Davies, *Computer Networks: A Systems Approach*, 5<sup>th</sup> Edition, Morgan Keuffmann, 2011.
2. J. F. Kurose and K. W. Ross, *Computers Networking – A Top Down Approach to the Internet*, 7<sup>th</sup> Edition, Addison-Wesley, 2016.

Teaching methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final exam and homework (Individual or Group Project and laboratory exercises).

### ***CS607 Visual Computing***

Type: Specialisation Course for PM and Restricted Choice for MCS, MIC, MIntS

Level: Graduate

Semester: Fall

Credit: 8 ECTS units

Instructor: C. Pattichis / Y. Chrysanthou

Objectives: -----

Content: Binary image processing, intensity transformations, the discrete Fourier transform,

linear and nonlinear filtering, image compression, image analysis, basic principles of video processing. Basic principles of 3Dgraphics: polygonal representations, transformations, local and world

coordinate system, scene graph, camera and field of view specification, orthographic and perspective projection, clipping in 2D & 3D, polygon rasterization, back face elimination, visible surface determination with the Z-buffer method and Binary Space Partitioning Trees, local illumination - flat, Phong & Gouraud shading, real-time graphics, applications.

Prerequisites: Programming in C, basic linear algebra

Bibliography:

1. A. Watt and F. Policarpo, *The Computer Image*, Addison–Wesley, 1998.
2. R. C. Gonzalez and R. E. Woods, *Digital Image Processing*, 2<sup>nd</sup> Edition, Addison–Wesley, 2002.
3. M.Slater, A. Steed and Y. Chrysanthou, *Computer Graphics and Virtual Environments: From Realism to Real-Time*, Addison-Wesley, 2001.

Teaching methods: Lectures (3 hours weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final exam 40%, Midterm Exam 20%, Exercises and Project 40%.

### ***CS608 Programming for Games and Interactive Technologies***

Type: Specialisation Course for MCG

Level: Graduate

Semester: Fall

Credit: 8 ECTS units

Instructor: .....

Objectives: Learning of theory and software development skills for understanding and solving computational problems that are common in the process of creating video games and other modern interactive applications. This is accomplished through the teaching of methods for analyzing problems, construction of suitable algorithms for their solution and their implementation, initially by using visual programming languages and subsequently third generation programming languages.

Content: Teaching material includes (a) introduction to the use of computers and programming languages for creating games and interactive applications, (b) analysis, specification and problem solving of applications in Computer Graphics, (c) program and data abstraction, (d) construction, articulation, documentation and implementation techniques for good programming practices, debugging and source code reuse, (e) hands on use of visual programming and scripting programming languages.

Bibliography:

1. C. Reas and B. Fry, *Getting Started with Processing*, O'Reilly Media, 2010.
2. A. S. Glassner, *Processing for Visual Artists: How to Create Expressive Images and Interactive Art*, A K Peters, 2010.

Teaching methods: Lectures (3 hours weekly) and Laboratory sessions (2 hours weekly).

Assessment: final exam, midterm exam and project.

### ***CS646 Advanced Topics in Databases***

Type: Specialisation Course for MIC and PM and Restricted Choice for MCS and MIntS

Level: Graduate

Semester: Winter

Credit: 8 ECTS units

Instructor: D. Zeinalipour

Objectives: The main objectives of this graduate-level course are to provide an in-depth understanding of advanced concepts and research directions in the field of databases. The course is organized in three parts: (i) Fundamentals of Database Systems Implementation; (ii) Distributed, Web and Cloud Databases; (iii) Spatio-temporal Data Management, Sensor Data Management, other selected and advanced topics from the recent scientific literature.

Content: (i) Fundamentals of modern Database Management Systems (DBMSs): storage, indexing, query optimization, transaction processing, concurrency and recovery. (ii) Fundamentals of Distributed DBMSs, Web Databases and Cloud Databases (NoSQL / NewSQL): Semi-structured data management (XML/JSON, XPath and XQuery), Document data-stores (i.e., CouchDB, MongoDB, RavenDB), Key-Value data-stores (e.g.,

BerkeleyDB, MemCached), Introduction to Cloud Computing (GFS, NFS, Hadoop HDFS, Replication/Consistency Principles), "Big-data" analytics (MapReduce, Apache's Hadoop, PIG), Column-stores (e.g., Google's BigTable, Apache's HBase, Apache's Cassandra), Graph databases (e.g., Twitter's FlockDB) and Overview of NewSQL (Google's Spanner and Google's F1). (iii) Spatio-temporal data management (trajectories, privacy, analytics) and index structures (e.g., R-Trees, Grid Files) as well as other selected and advanced topics, including: Embedded Databases (sqlite), Sensor / Smartphone / Crowd data management, Energy-aware data management, Flash storage, Stream Data Management, etc.

Prerequisites: Undergraduate course equivalent to the CS342 (Database Systems)

Bibliography:

1. S. Abiteboul, I. Manolescu, P. Rigaux, M.-C. Rousset, P. Senellart, *Web Data Management*, Cambridge University Press, 2011.
2. R. Elmasri, S. Navathe, *Fundamentals of Database Systems*, 6<sup>th</sup> Edition, Addison-Wesley, 2011.
3. T. Özsu, P. Valduriez, *Principles of Distributed Database Systems*, 3<sup>rd</sup> Edition, Springer Press, 2011.
4. R. Ramakrishnan, J. Gehrke, *Database Management Systems*, 3<sup>rd</sup> Edition, McGraw-Hill, 2003.

Teaching methods: Lectures (3 hours weekly), and Laboratory sessions (2 hours weekly).

Assessment: Midterm, final exam and homework (assignments and presentation).

### ***CS651 Data Management for Mobile Computing***

Type: Specialization Course for MIC and PM and Restricted Choice for MCS, MIntS

Level: Graduate

Semester: Spring

Credit: 8 ECTS units

Instructor: -----

Objectives: Introduction to fundamental concepts, applications and limitations of mobile computing. Familiarization with practical applications and research topics of current interest in the field of Mobile Computing.

Content: Introduction (wireless technologies, architectures, applications, limitations). Software architectures for mobile computing. Theoretical models for mobile computing. Support for information recovery. Information Management. Dynamic redirection of computations. Indicative applications and open problems.

Prerequisites: Undergraduate course equivalent to the CS446 (Advanced Topics in Databases) and undergraduate course equivalent to the CS324 (Communications and Networks)

Bibliography:

1. E. Pitoura and G. Samaras, *Data Management for Mobile Computing*, Kluwer Academic Publisher, 1998.

Teaching methods: Lectures (3 hours weekly) and Recitation (1 hour weekly).

Assessment: Final exam, midterm exam and homework.

### ***CS653 Computer Games Software Technology***

Type: Specialisation Course for MIntS, PM and Restricted Choice for MIC, MCS

Level: Graduate

Semester: Spring

Credit: 8 ECTS units

Instructor: -----

Objectives: Study in depth of the technologies of Electronic Commerce. Introduction to the software technology of client/server systems of e-Commerce and to Business Models of e-Commerce.

Content: Game structure and design, computer animation, movement and deformation, interactive cameras, visual simulation of physically-based models, special effects using

particle systems, collision detection, articulated characters, navigation and other behavioural models for autonomous characters.\_

Prerequisites: -----

Bibliography:

1. R. Parent, *Computer Animation: Algorithms and Techniques*, Morgan Kaufmann, 2002.
2. A. Watt and M. Watt, *Advanced Animation and Rendering Techniques*, Addison-Wesley, 1992.
3. I. Millington, *Artificial Intelligence for Games*, Morgan Kaufmann, 2006.

Teaching methods: Lectures (3 hours weekly) and Laboratory (2 hours weekly).

Assessment: Final exam, midterm exam and homework.

### **CS655 Advanced Parallel Processing II**

Type: Specialisation Course for PM and Restricted Choice for MCS, MIC, MIntS

Level: Graduate

Semester: Spring

Credit: 8 ECTS units

Instructor: P. Trancoso

Objectives: Introduction to fundamental architectural concepts and methods for parallel program execution. Examine the challenges and difficulties for parallel computing.

Content: Support for parallel program execution, parallel architectures, different types of multiprocessor interconnection networks, compilation of parallel programs, and performance analysis of various parallel applications.

Prerequisites: Undergraduate course equivalent to the CS420 (Computer Architecture) or undergraduate course equivalent to the CS605 (Advanced Computer Architecture I) or the consent of the instructor.

Bibliography:

1. J. Hennessy and D. Patterson, *Computer Architecture: A Quantitative Approach*. Third Edition, Morgan Kaufmann, 2002.
2. D. E. Culler and J. P. Singh. *Parallel Computer Architecture: A Hardware/Software Approach*, Morgan Kaufmann, 1998.
3. Selected research articles from the international literature.

Teaching methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final exam, midterm exam and homework (group project and exercises).

### **CS656 Computer Graphics: Modeling and Realism**

Type: Specialisation Course for PM and Restricted Choice for MCS, MIC, MIntS

Level: Graduate

Semester: Spring

Credit: 8 ECTS units

Instructor: Y. Chrysanthou

Objectives: This course goes beyond the basics of digital image synthesis, looking at issues such as photo-realistic rendering, modeling and animation. A big component for this are the creation of realistic and detailed models as well as the faithful simulation of light transport. We will see how these can be applied to virtual and augmented reality. Students will acquire both the theoretical foundations as well as practical skills since a significant part of the course is the student project.

Content: Modeling, parametric and implicit surfaces, camera specification, projections of primitives. Graphics Pipeline. Local and global illumination, shadows, ray tracing and radiosity. Real-time rendering of large environments. Acceleration techniques.

Prerequisites: C Programming and basic Linear Algebra.

Bibliography:

1. M. Slater, A. Steed and Y. Chrysanthou, *Computer Graphics and Virtual Environments: From Realism to Real-Time*, Addison-Wesley, 2001.
2. A. Watt, *3D Computer Graphics*, 3<sup>rd</sup> Edition, Addison-Wesley, 2001.

Teaching methods: Lectures (3 hours weekly) and Laboratory sessions (2 hours weekly).  
Assessment: Final exam, midterm exam and homework (group project and exercises).

### **CS657 Wireless Networks**

Type: Specialisation Course for MIC and Restricted Choice for MCS, MIntS, PM

Level: Graduate

Semester: Spring

Credit: 8 ECTS units

Instructor: A. Pitsillides

Objectives: Introduction to wireless networks (mobile/local/cellular/Ad-hoc/Sensor) with an emphasis on the fundamental concepts and principles of the technologies which are important for the design, application, evaluation and development of these systems. The course will also cover new architectures and topologies, existing and proposed standards, as well as open research issues.

Content: Wireless environment, Interference and other problems in wireless communications, basic principles of wireless local and metropolitan area networks, and cellular wireless networks. New architectures and technologies of wireless networks and wireless communication (e.g., ad-hoc and sensor networks, VANETS). Resource management techniques, Next Generation wireless networks of 3<sup>rd</sup>, 4<sup>th</sup> and 5<sup>th</sup> generation (3G UMTS, LTE, 4G, 5G), design and planning of wireless networks, protocols for wireless and mobile networks. Internet/Web of Things.

Prerequisites: Undergraduate course equivalent to the CS324 (Communications and Networks)

Bibliography:

1. H Karl and A. Willing, *Protocols and Architectures for Wireless Sensor Networks*, Wiley, 2005.
2. K. Sohraby, D. Minoli and T. Znati, *Wireless Sensor Networks: Technology, Protocols, and Applications*, Published Online, 2006.  
K. Sohraby, D. Minoli and Taieb, *Wireless Sensor Networks: Technology, Protocols, and Applications*, 2006,

Teaching methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final exam and homework (including Individual or Group Project and laboratory exercises).

### **CS658 Digital Video Processing**

Type: Specialisation Course for MIntS and Restricted Choice for MCS, PM, MIC

Level: Graduate

Semester: -----

Credit: 8 ECTS units

Instructor: C. Pattichis

Objectives: Basic familiarization with the application of current technology for processing and coding video.

Content: Basic of analog and digital video. Frequency domain analysis of video signals, spatial and temporal frequency response of the human visual system. Scene, camera, and motion modeling, 3D motion and projected 2D motion, models for typical camera/object motions. 2D motion estimation. Basic compression techniques. Waveform-based coding. Video compression standards (H.261 and H.263, MPEG-1, MPEG-2, MPEG-4, MPEG-7, MPEG-21).

Prerequisites: -----

Bibliography:

1. Y. Wang, J. Ostermann and Y. Q. Zhang, *Video Processing and Communications*, Prentice Hall, 2002.

Teaching methods: Lectures (3 hours weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final exam, midterm exam and homework (laboratory exercises, additional exercises, final study).

### **CS659 Design on Embedded Systems**

Type: Specialisation Course for PM and Restricted Choice for MCS, MIC, MIntS

Level: Graduate

Semester: -----

Credit: 8 ECTS units

Instructor: P. Evripidou

Objectives: -----

Content: A review of embedded system processors. Organization of embedded systems: CPUs, RAM, ROM, buses, peripherals, sensors, actuators, interfacing. Examples of widely used processors buses and peripherals. Interfacing with peripherals: sampling, interrupts, advantages and disadvantages. Process distribution between hardware and software. Tools for the development of embedded systems and real-time operating systems. Hands-on experience with the development and implementation of embedded systems.

Prerequisites: Knowledge on the subjects of Digital Systems, Computer Organization and Assembly Programming

Bibliography:

1. F. Vahid and T. Givargis, *Embedded System Design: A Unified Hardware/Software Introduction*, John Wiley & Sons, 2002.
2. W. Wolf, *High-Performance Embedded Computing: Architectures, Applications and Methodologies*, Morgan Kaufman.
3. W. Wolf, *Computers as Components: Principles of Embedded Computing System Design*, Morgan Kaufman.
4. P. Raghavan, A. Lad, S. Neelakandan, *Embedded Linux System Design and Development*, Auerbach Publications

Teaching methods: Lectures (3 hours weekly) and Recitation (1 hour weekly) Laboratory sessions (2 hours weekly).

Assessment: Final exam, midterm exam and homework.

### ***CS660 Information Retrieval and Search Engines***

Type: Specialisation Course for MIC, MIntS and Restricted Choice for MCS, PM

Level: Graduate

Semester: Spring

Credit: 8 ECTS units

Instructor: G. Pallis

Objectives: The objective of this course is to examine the main computer science principles that lie behind Google and other search engines. To this end, the course will focus on basic and advanced techniques for text-based information systems: efficient text indexing; Boolean and vector space retrieval models; evaluation and interface issues; text classification and clustering. The course will also focus on Web search including crawling, link-based algorithms, and Web metadata.

Content: Introduction to Information Retrieval. Boolean Retrieval. Text encoding: tokenisation, stemming, lemmatisation, stop words, phrases. Dictionaries and Tolerant retrieval. Index Construction and Compression. Scoring and Term Weighting. Vector Space Retrieval. Evaluation in information retrieval. Relevance feedback/query expansion. Text classification and Naive Bayes. Vector Space Classification. Flat and Hierarchical Clustering. Web Search Basics. Web crawling and indexes. Link Analysis.

Prerequisites: Algorithms, Data Structures, Internet Technologies and Linear Algebra

Bibliography:

1. C. D. Manning, P. Raghavan and H. Schütze, *An Introduction to Information Retrieval*, Cambridge University Press, 2008.

Teaching methods: Lectures (3 hours weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final exam, midterm exam and homework.

### ***CS662 Machine Learning and Data Mining***

Type: Specialisation Course for MIntS, PM and Restricted Choice for MCS, MIC

Level: Graduate

Semester: -----

Credit: 8 ECTS units

Instructor: C. Pattichis

Objectives: Introduction of the fundamental principles, algorithms and techniques that support the development and implementation of data mining systems leading in the extraction of knowledge.

Content: Data Warehouse and OLAP Technology for Data Mining. Data Processing. Data Mining Primitives, Languages, and System Architectures. Concept Description: Characterization and Comparison. Mining Association Rules in Large Databases. Classification and Prediction. Cluster Analysis. Mining Complex Types of Data. Applications and Trends in Data Mining.

Prerequisites: -----

Bibliography:

1. J. Han and M. Kamber, *Data Mining – Concepts and Techniques*, Morgan Kaufmann, 2000.

Teaching methods: Lectures (3 hours weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final exam, midterm exam and homework (case studies, exercises, oral presentation of a case study).

### ***CS663 Computational Logic***

Type: Specialisation Course for MIntS and Restricted Choice for MCS, MIC, PM

Level: Graduate

Semester: -----

Credit: 8 ECTS units

Instructor: A. Kakas

Objectives: Familiarization with fundamental concepts and applications of Computational Logic. Familiarization with current research trends in Computational Logic.

Content: Historical introduction. Review of Classical Logic. Abduction and induction. Knowledge representation and knowledge. Reasoning about Actions and Change. Application of Computational Logic. Declarative Programming. Autonomous Agents. Knowledge-based Robotics. Intelligent Information Integration.

Prerequisites: Undergraduate course equivalent to the CS324 (Communications and Networks)

Bibliography:

1. Selected research articles from the international literature.

Teaching methods: Lectures (3 hours weekly) and Recitation (1 hour weekly).

Assessment: Final exam and homework.

### ***CS664 System Analysis and Verification***

Type: Restricted Choice for MCS, MIC, MIntS, PM

Level: Graduate

Semester: -----

Credit: 8 ECTS units

Instructor: A. Philippou

Objectives: Familiarization with current technologies for modeling, analysis and verification of computer systems.

Content: Formal methods for system specification and analysis. Concurrent systems and interleaving and partial-order semantics. Transition systems and Kripke structures. Temporal logic (linear and branching). Automatic verification and model-checking. Process algebras: syntax, semantics, equivalence relations and axiom systems. Real-time system analysis (timed automata, timed process algebras and timed temporal logic). The tools SPIN and Concurrency Workbench.

Prerequisites: -----

Bibliography:

1. D. Peled, *Software Reliability Methods*, Springer-Verlag, 2001.
2. C. Baier and J.-P. Katoen, *Principles of Model Checking*. MIT Press, 2008
3. L. Aceto, A. Ingólfssdóttir, K. G. Larsen and J. Srba, *Reactive Systems: Modelling, Specification and Verification*. Cambridge University Press, 2007.
4. Selected research articles from the international literature.

Teaching methods: Lectures (3 hours weekly) and Recitation (1 hour weekly).

Assessment: Final exam, midterm exam and homework.

### **CS665 Constraint Solving Methods**

Type: Specialisation Course for MIntS and Restricted Choice for MCS, MIC, PM

Level: Graduate

Semester: -----

Credit: 8 ECTS units

Instructor: Y. Dimopoulos

Objectives: A significant number of problems in Computer Science over a wide spectrum ranging from Computer Vision and Artificial Intelligence to the Management of Computer Networks and Scheduling are special cases of Constraint Satisfaction problems. This course covers advanced techniques for solving such problems and describes how they can be used in tackling real-life applications.

Content: Review of basic concepts from Constraint Satisfaction over Finite Domains. Advanced Consistency Techniques in Binary and non-Binary problems. Constraint Satisfaction and Propositional Logic: new algorithms and reduction techniques. Logic Programs with negations and the systems SMOODELS and DLV. Relation between Constraint Satisfaction and Propositional Satisfiability. Redundant Constraints. Planning and Constraint Satisfaction. Satisfaction of Temporal Constraints. Introduction to Distributed Constraint Satisfaction. Problem solving with CHIP.

Prerequisites: CS604 or CS433

Bibliography:

1. R. Dechter, *Constraint Processing*, Morgan Kaufmann, 2003.
2. Selected research articles from the international literature.

Teaching methods: Lectures (3 hours weekly) and Recitation/Laboratory sessions (1 hour weekly).

Assessment: Final exam, midterm exam and programming exercises.

### **CS667 Neuroinformatics**

Type: Specialisation Course for MIntS and Restricted Choice for MCS, MIC, PM

Level: Graduate

Semester: Spring

Credit: 8 ECTS units

Instructor: Ch. Christodoulou

Objectives: Neuroinformatics or Computational Neuroscience is an emerging and dynamically developing field aiming to elucidate the principles of information processing by the nervous systems well as applying information technology to the processing of neuroscientific data. This course aims to develop and apply computational methods for studying brain and behaviour as well as understanding the dynamics of the conscious mind.

Content: Introduction to Neuroinformatics; basic neurobiology: from the brain to single neurons; biophysics of single neurons; synapses; dendrites and axons. Conductance-based neuron models: the generation of action potentials and the Hodgkin and Huxley equations. Dendritic trees, the propagation of action potentials, cable theory, compartmental models. Modelling synapses. Spiking neuron models and response variability: leaky integrator and integrate-and-fire type neuron models, spike time variability. Current topics in Neuroinformatics including (a) understanding of the neural code (b) Synaptic Plasticity. Bottom-up/top-down modeling of the brain: modeling of self-control behaviour as an example of top-down modeling. Modelling consciousness. Applications of Neuroinformatics; Neuroinformatics vs Bioinformatics.

Prerequisites: Linear Algebra, Differential Equations

Bibliography:

1. P. Dayan and L. Abbott, *Theoretical Neuroscience: Computational and Mathematical Modelling of Neural Systems*, MIT Press, 2001.
2. D. Sterratt, B. Graham, A. Gilles and D. Willshaw, *Principles of Computational Modelling in Neuroscience*, Cambridge University Press, 2011.
3. W. Gerstner and W. M. Kistler, *Spiking Neuron Models: Single Neurons, Populations and Plasticity*, Cambridge University Press, 2002.

4. C. Koch, *Biophysics of Computation: Information Processing in Single Neurons*, Oxford University Press, 1998.
5. E. M. Izhikevich, *Dynamical Systems in Neuroscience: the Geometry of Excitability and Bursting*, MIT Press, 2007.

Teaching methods: Lectures (3 hours weekly) and Recitation/Laboratory sessions (2 hours weekly).

Assessment: Final exam, midterm exam and laboratory exercises /oral presentations of selected research papers.

### **CS668 Mechanical Vision**

Type: Specialisation Course for PM  
Restricted Choice for MCS, MIC, MIntS

Level: Graduate

Semester: Spring

Credit: 8 ECTS units

Instructor: C. Pattichis / Y. Chrysanthou

Objectives: The objective of this course is to understand the basic issues in mechanical vision and the major approaches that address them. Through the duration of the course, vision is treated as a process of inference from noisy and uncertain data in order to answer the question of how computers can understand the visual world of humans.

Content: Basic concepts and methodologies relating to the subject of Computer Vision. Image information, image processing, feature extraction. Image segmentation, clustering, multiple-image processing, case studies.

Prerequisites: -----

Bibliography:

1. D. Forsyth and J. Ponce, *Computer Vision: A Modern Approach*, Prentice-Hall, 2003.
2. R. Hartley and A. Zeisserman, *Multiple View Geometry*, Cambridge University Press, 2003.
3. C. Bishop, *Pattern Recognition and Machine Learning*, Springer-Verlag, 2007.
4. O. Faugeras and Q.T. Luong, *Geometry of Multiple Images*, MIT Press, 2001.
5. B. Horn, *Robot Vision*, MIT Press, Cambridge, Massachusetts, 1986.

Teaching methods: Lectures (3 hours weekly) and Laboratory sessions (1 hour weekly).

Assessment: Final exam, midterm exam and homework (programming exercises).

### **CS670 Research Methodologies and Professional Practices in Computer Science**

Type: MCS, MIC, MIntS, PM

Level: Graduate

Semester: Spring

Credit: 4 ECTS units

Instructor: .....

Objectives: Introduction to the methods and tools of Computer Science Research and technological culture. Familiarization with reading, reviewing and presenting of relevant literature. Technical writing. Literature surveying.

Content: Seminars/lectures in Computer Science and practice. Research or technical literature reviewing. Presentation of technical study.

Prerequisites: -----

Bibliography:

1. Selected research articles from the international literature.
2. Course Presentation Slides (introductory and research).

Teaching methods: Lectures, research seminars and atomic assignments (summary of research seminars) and group study of a research subject under the supervision of a faculty member.

Assessment: Attendance and participation in lectures and a number of research seminars, written atomic studies, group study of a research subject and technical presentation of the group study. The course grade is Pass/Fail.

### **CS673 Algorithmic Game Theory**

Type: Specialisation Course for MIC and Restricted Choice for MCS, MIntS, PM

Level: Graduate

Semester: -----

Credit: 8 ECTS units

Instructor: M. Mavronicolas

Objectives: -----

Content Strategic games. Pure and mixed strategies, utilities, best responses, equilibrium concepts. Pure and mixed Nash equilibria, their refinements and generalisations. Classical existence theorems of equilibria and their algorithmic aspects. Algorithms and complexity of equilibrium searching. The complexity classes PLS and PPAD and their relation to equilibrium computation. Bimatrix games and algorithms to compute their approximate equilibria. The Price of Anarchy and its variants. Analysis of the Price of Anarchy for both general and specific games (e.g., selfish routing games, congestion games, security games). Applications to realistic cases (e.g., social networks, Internet formation).

Prerequisites: Undergraduate course equivalent to the CS211 (Theory of Computation ) and undergraduate course equivalent to the CS436 (Algorithms and Complexity)

Bibliography:

1. M. Mavronicolas and P. Spirakis, *Algorithmic Game Theory*, Springer, 2011, (book draft).
2. Selected research articles from the international literature\_

Teaching methods: Lectures (3 hours weekly) and Recitation/Laboratory sessions (1 hour weekly).

Assessment: Final exam, midterm exam and homework (theoretical assignments).

#### ***CS674 Networks and System Security***

Type: Specialization Course for MIC, PM and Restricted Choice for MCS, MIntS

Level: Graduate

Semester: -----

Credit: 8 ECTS units

Instructor: A. Pitsillides, V. Vassiliou

Objectives: -----

Content Introduction to security threats and attacks. Cryptographic and cryptanalysis techniques. Key exchange management (PKI). Network and Internet security protocols (IPSec, SSL/TLS). Identification and authentication standards (Kerberos, AAA). Systemsecurity (Firewalls, IDS). Specific threats on end-systems (viruses, worms, trojan horses, stack overflow, rootkits). Identification of security vulnerabilities in software and operating systems. Checking of networks and applications for vulnerabilities, introduction to computer systems forensics. Security policies. Security management, ethical and legal issues in system security.

Prerequisites: Introductory graduate course equivalent to CS606 (Computer Networks and the Internet)

Bibliography:

1. C. P. Pfleeger, S. L. Pfleeger, *Security in Computing*, Fourth Edition, Prentice Hall, 2006.
2. C. Kaufman, R. Perlman, and M. Speciner, *Network Security: PRIVATE communication in a PUBLIC world*, Second Edition, Prentice Hall, 2002.
3. M. Dowd, J. McDonald and J. Schuh, *The Art of Software Security Assessment*, Addison Wesley, 2006.

Teaching methods: Lectures (3 hours weekly) and Recitation/Laboratory sessions (1 hour weekly and 2 hours weekly, respectively).

Assessment: Final exam, midterm exam and homework (studies and/or laboratory assignments).

#### ***CS675 Web Services and Service Oriented Computing***

Type: Specialisation Course for MIC, PM and Restricted Choice for MCS, MIntS

Level: Graduate

Semester: -----

Credit: 8 ECTS units

Instructor: -----

Objectives: Understanding of the principles and the design of Web services, the programming of Web services and the protocols used. Understanding of the new architecture of microservices. Familiarization with knowledge representation via ontologies. Understanding of representation mechanisms.

Content: Introductory concepts. Relationship and difference between services and other related formalisms (distributed systems, component-based systems, etc.). Fundamental architectures and protocols (REST, SOAP, WSDL, UDDI). Fundamental development platforms (J2EE, JAX-RS, etc.). The microservices architecture. Problems and challenges. Information modeling and representation (ontologies, RDF and OWL protocols, etc.). Queries with SPARQL. LinkedData representation. Cooperative Information Systems and service composition. Business process modeling with WS-BPEL

Prerequisites: -----

Bibliography:

1. M. P. Papazoglou, *Web Services: Principles and Technology*, 2<sup>nd</sup> edition, Pearson Prentice Hall, 2012.
2. R. Daigneau, *Service Design Patterns Fundamental Design Solutions for SOAP/WSDL and RESTful Web Services*, 2010.
3. D. Allemang, J. Hendler, *Semantic Web for the Working Ontologist: Effective Modeling in RDFS and OWL*, Morgan Kaufman, 2011.

Teaching methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (2 hours weekly).

Assessment: Final exam, midterm exam and homework (studies and/or laboratory assignments).

### ***CS678 Temporal Information Systems in Medicine***

Type: Advanced Elective Course

Level: Postgraduate

Semester: Fall

Credit: 8 ECTS units

Instructor: E.Keravnou-Papailiou

Objectives: Often the question whether medicine is art or science is posed. The support of various medical tasks (diagnosis, prognosis, therapy planning and patient monitoring) through information systems, actively concerns a number of scientific communities (artificial intelligence, databases, biomedical engineering, medical informatics), where the temporal dimension constitutes an integral aspect. Recently the focus has changed, from applications based on knowledge, to applications based on data, and from systems that advise to systems that inform. The key challenge is no longer the mechanization of knowledge but the intelligent utilization of data. Medical problems and the deployment of medical data pose particular challenges, especially when the temporal dimension is a central component. The course aims to present from a critical perspective the various aspects of Temporal Information Systems in Medicine (theoretical foundations, applications, open research topics) where such systems can be defined as information systems that can store, manage and query time-oriented clinical data and can support various reasoning tasks with respect to such data

Content: The significance of time in medicine. Modeling and reasoning with time (models of time and temporal entities). Requirements, ontologies and temporal reasoning models. General theories of time from the perspective of the medical domain. Temporal databases and their extensions for clinical data. Temporal abstraction of medical data (types of abstractions, time-oriented patient monitoring). Time and clinical diagnosis (diagnostic concepts, example applications, abductive reasoning using time-objects, temporal constraints). Automated support for clinical guidelines and protocols (time-oriented modeling of clinical guidelines). Research challenges.

Prerequisites: -----

Bibliography

1. C. Combi, E. Keravnou-Papailiou and Y. Shahar, *Temporal Information Systems in Medicine*, Springer, 2010.

2. M. Fisher, D. Gabbay and L. Vila (eds), *Handbook of Temporal Reasoning in Artificial Intelligence*, Elsevier, 2005.
3. C. Bettini, S. Jajodia and S. X. Wang, *Time Granularities in Databases - Data Mining and Temporal Reasoning*, Springer, 2000.
4. I. Mani, J. Pustejovsky and R. Gaizauskas (eds.), *The Language of Time: A Reader*, Oxford University Press, 2005.
5. Articals from scientific journals, such as Artificial Intelligence in Medicine.

Teaching Methods: Lectures (3 hours weekly) and discussions/presentations in the form of seminars (1 hour weekly).

Assessment: Written examinations (midterm and final) and assignments (written essays and/or programming projects).

### **CS679 Electronic Health**

Type: Specialisation Course for MintS and PM and Restricted Choice for MCS and MIC

Level: Graduate

Semester: Fall

Credit: 8 ECTS units

Instructor: Ch. Schizas

Objectives: To introduce the student to the medical and clinical environment from the perspective of medical informatics and exploit the possibilities of using information technologies for modeling, prototyping, presenting and using the relevant data. To study and develop practical skills in building relevant intelligent information systems.

Content: Information retrieval from medical databases, data, medical records, live signals, and data mining using intelligent techniques. Study of application systems that are currently in use for managing medical data and suggest ways for better handling and building, medical knowledge bases, electronic health record, and decision support systems for the medical profession.

Prerequisites: -----

Bibliography:

1. J. H. van Bommel and M. Musen (Edts), *Handbook of Medical Informatics*, Springer, 1997.
2. E.H. Shortliffe (Editor), L. M. Fagan, G. Wiederhold, L.E. Perreault, *Medical Informatics: Computer Applications in Health Care and Biomedicine*, Springer Verlag, Second, 2000.
3. L.Burke, B. Weill, *Information Technology for the health professionals*, Pentice Hall, 2000.

Teaching methods: Lectures (3 hours weekly) and Discussions/Presentations (1 hour weekly).

Assessment: Final exam, midterm exam and homework (studies and/or laboratory assignments).

### **CS680 Cognitive programming**

Type: Restricted Choice for MCS, MIC, MIntS, PM

Semester: Spring

Credit: 8 ECTS units

Instructor: A. Kakas

Objectives:

Content: Basic elements of cognitive science and the relation between logic and argumentation. Computation models for cognitive intelligence that follow representational models from cognitive psychology. The structure of knowledge and the human mechanism for common logic. The architecture of cognitive systems and their dynamic development cycle. Utilization of STAR, IBM Watson and other similar systems in the development of cognitive systems.

Prerequisites: -----

Bibliography:

Teaching methods: -----

Assessment: -----

### ***CS681 Advanced Topics in Software Reuse***

***Type:*** Specialisation Course for MIC, PM and Restricted Choice for MCS, MIntS

***Level:*** Graduate

***Semester:*** Spring

***Credit:*** 8 ECTS units

***Instructor:*** G. Kapitsaki

***Objectives:*** Understanding the usefulness of software reuse. Deepening in the different levels of reuse and understanding the differences between them. Use of software components in practice.

***Content:*** Levels of reuse. Best practices for reuse. Evolution of reuse. Software repositories. Search and retrieval. Data extraction. Use of dedicated APIs. Design patterns. Object-oriented programming standards. Open source software. Open source licensing and legal issues. Organization policies and open-source based development. License compliance. Model-Driven Engineering reuse. Service-Oriented Computing (SOAP, RESTful). Reuse on service level.

***Prerequisites:*** -----

***Bibliography:***

1. M. Ezran, M. Morisio, C. Tully, *Practical Software Reuse*, Practitioner Series, 2002.
2. E. Freeman, E. Robson, B. Bates, K. Sierra, *Head First Design Patterns*, O'Reilly Media, 2004.
3. C. Horstmann, *A Practical Guide to Open Source Licensing*, Wiley, 2<sup>nd</sup> Edition, 2006.
4. Selected research papers and articles.

***Teaching methods:*** Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (2 hours weekly).

***Assessment:*** Final and midterm exam, homework and semester project.

### ***CS682 Advanced Security Topics***

***Type:*** Specialisation Course for MIC, PM and Restricted Choice for MCS, MIntS

***Level:*** Graduate

***Semester:*** Spring

***Credit:*** 8 ECTS units

***Instructor:*** E. Athanasopoulos

***Objectives:*** Crash-course introduction to applied cryptography, systems and network security and thoroughly covering of several advanced topics in applied cryptography, software vulnerabilities and memory errors, side channels, attacks and defenses, mobile security, web security, network security, privacy, and anonymity.

***Content:*** Short introduction to security basics and then special topics are presented. Special topics include advanced cryptographic attacks in protocols, software exploitation through code-reuse (return-oriented programming, jump-oriented programming, and call-oriented programming), heap exploitation, side channels, advanced software hardening, exploiting special network protocols (DNS, NTP, etc.), complex attacks in network applications, and privacy issues. The course is seminar-based in part. Once the basics are introduced by the instructor, students will study advanced papers in class and will have the opportunity to get a feeling of what are the important topics in modern security research.

***Prerequisites:*** -----

***Bibliography:***

1. A. J. Menezes, P. C. van Oorschot, S. A. Vanstone. *Handbook of Applied Cryptography*, CRC Press.
2. R. Anderson. *Security Engineering: A Guide to Building Dependable Distributed Systems*, 2<sup>nd</sup> Edition, Wiley.
3. W. R. Cheswick, S. M. Bellovin, A. D Rubin. *Firewalls and Internet Security: Repelling the Wily Hacker*, 2<sup>nd</sup> Edition, Addison-Wesley Professional, 2003.
4. C. Anley, J. Heasman, F. Lindner, G. Richarte. *The Shellcoder's Handbook: Discovering and Exploiting Security Holes*, 2<sup>nd</sup> Edition. Wiley, 2007.
5. Selected research papers and articles.

***Teaching methods:*** Lectures (3 hours weekly) and Recitation (1 hour weekly).

Assessment: Final exam, midterm exam, student paper presentation and homework (including laboratory assignments).

***CS699 Special Topics in Computer Science: Online Social Networks***

Type: Restricted Choice for Ph.D. candidates (and conditionally for MCS, MIC, MIntS, PM)

Level: Ph.D. and Advanced M.Sc.

Semester: Spring

Credit: 8 ECTS units

Instructor: M. Dikaiakos

Language of Instruction: English.

Objectives: Survey of recent scientific literature of Online Social Networking Systems. Study of basic concepts, principles, techniques and scientific results that shape the analysis and evolution of Online Social Networking Systems.

Content: Introduction to Social Networks. Design Principles of Online Social Networking Systems. Overview of popular Online Social Networking Systems: Facebook, Twitter, LinkedIn. Social Networks analysis from a Complex Networks Perspective. Data Mining of Online Social Networks data. Modeling of Online Social Networks.

Prerequisites: (for M.Sc. students) CS646, CS660 or the consent of the instructor.

Bibliography:

1. Vakali and Jain (Eds), *New Directions in Web Data Management 1*, Springer, 2011.
2. Easley and Kleinberg, *Networks, Crowds and Markets*, Cambridge, 2010.
3. Selected articles from scientific journals and conferences.

Teaching methods: Lectures (3 hours weekly).

Assessment: Active participation in the class, paper assignments, authoring of scientific survey paper, semester team-project.

## *Short Biographical Notes of Academic Staff*

**Elias Athanasopoulos**, Assistant professor with the Computer Science Department, UCY. Before joining UCY he was an assistant professor with Vrije Universiteit Amsterdam. He holds a BSc in Physics from the University of Athens and a PhD in Computer Science from the University of Crete. He is a Microsoft Research PhD Scholar. He has interned with Microsoft Research in Cambridge and he has worked as a research assistant with FORTH in Greece from 2005 to 2011. He is also a Marie Curie fellow. Before joining the faculty of Vrije Universiteit Amsterdam, he was a postdoctoral research scientist with Columbia University and a collaborating researcher with FORTH. He has several publications in the top security conferences like IEEE Security and Privacy, ACM CCS, Usenix Security, and NDSS.

**Chris Christodoulou**, Associate Professor. Undergraduate studies at Queen Mary and Westfield College, University of London, UK (BEng in Electronic Engineering, 1991) and Birkbeck College, University of London, UK (BA in German, 2008). Graduate studies at the Kings College, University of London, UK (Ph.D. in Electronic Engineering, 1997). He has worked as a Postdoctoral Research Associate at the Kings College, University of London, UK (1995-97), and he has taught as a Lecturer at Birkbeck College, University of London, UK (1997-2005). His research interests include Computational and Cognitive Neuroscience as well as Neural Networks.

**Yiorgos Chrysanthou**, Professor. Head of the Graphics and Hypermedia lab. He is the Research Director of the Centre on Interactive Media, Smart Systems and emerging Technologies (RISE). Educated in the UK (BSc and PhD from Queen Mary and Westfield College). He has worked for several years as a research fellow and a lecturer at University College London. He has published over 80 papers in journals and international conferences on computer graphics and virtual reality and is a co-author of the book "Computer Graphics and Virtual Environments: From Realism to Real-Time", (Addison-Wesley 2001+ China Machine Press 2004). He serves as an associate editor for the Journals Computer Graphics Forum and Computers and Graphics, and review editor for Frontiers in Robotics and AI (Specialty Section Virtual Environments). He served as the local or overall coordinator of over 25 research projects, related to 3D graphics, virtual reality and applications and as Organising or Program Chair for several conferences. His research interests lie in the general area of 3D Computer Graphics, recently focusing more on the development of algorithms for real-time AR and VR rendering, reconstruction of urban environments and computer animation.

**Marios D. Dikaiakos**, Professor. Undergraduate studies at the National Technical University of Athens (Dipl.-Ing. In Electrical Engineering, summa cum laude, 1988). Graduate studies at Princeton University (Ph.D. 1994, M.A. 1991 - both in Computer Science). He has worked and taught as Research Associate at the University of Washington, Seattle, USA (1994-1995), the University of Cyprus (visiting Assistant Professor 1996; Assistant Professor 1998-2004; Associate Professor 2004-2011; Professor from 2012), the University of Crete, Greece (Socrates/Erasmus visiting Professor, 10/2004), and Rutgers University, USA (visiting Research Professor, spring semester 2005). He also spent a pre-doctoral internship at the Paris Research Lab of Digital Equipment Corporation (1991). He established and is the Principal Investigator of the Laboratory for Internet Computing at the Department of Computer Science, University of Cyprus, where he directs several research projects funded by the European Union and the Research Promotion Foundation of Cyprus. Dr. Dikaiakos has served in the program committees of several international scientific conferences and has consulted with the European Commission and several organizations of European countries in evaluating research proposals, research projects, and academic work.

His research interests include Network-Centric Computing with an emphasis on Grid Computing systems (Performance, Dependability, Information Services), Web Technologies (Search Engines, Web Characterization and Mining), and Mobile Computing (Application Protocols).

**Yannis Dimopoulos**, Professor. Undergraduate and graduate studies at the Athens University of Economics (B.Sc. in Computer Science 1987, Ph.D. in Computer Science, 1992). He has worked as Researcher at the Max-Planck-Institute for Computer Science, Germany (1992-1994), University of Cyprus (1995-1996) and University of Freiburg, Germany (1996-1998). His research interests are in the area of Artificial Intelligence with emphasis on Knowledge Representation and Reasoning, Planning, Logic Programming, Constraint Satisfaction and Machine Learning.

**Paraskevas Evripidou**, Professor. Undergraduate studies at the Higher Technical Institute, Cyprus (H.N.D. in Electrical Engineering, 1981) and University of Southern California, USA (B.Sc. in Electrical Engineering, 1985). Graduate studies at the University of Southern California USA (M.Sc., 1986 and Ph.D., 1990, both in Computer Engineering). He has taught at the University of Southern California, USA (part-time faculty, 1989-1990) and at the Southern Methodist University, USA (Assistant Professor, 1990-1994). He has been the Program Co-Chair for the 8th Panhellenic Conference on Informatics (2001) and the Program Chair for the 3rd South Eastern European Conference on E-Commerce (2002). His research interests include Parallel Processing and Computer Architecture, Data Flow Systems, Functional Programming and Parallelizing Compilers, and Electronic Commerce.

**Chryssis Georgiou**, Associate Professor. Undergraduate studies at the University of Cyprus, Cyprus (B.Sc. in Mathematics, 1998). Graduate studies at the University of Connecticut, USA (M.Sc., 2002; Ph.D., 2003, both in Computer Science and Engineering). He has worked as a Teaching and Research Assistant at the University of Connecticut, USA (1998-2003) and as a Visiting Lecturer (2004), as a Lecturer (2005-2008) and as an Assistant Professor (2009-2013) at the University of Cyprus. His research interests span the Theory and Practice of Distributed and Parallel Computing; in particular, Fault-tolerance and Dependability, Algorithms and Complexity, Communication Networks and Paradigms, Distributed Atomic Storage, Algorithmic Game Theory and Dynamic Computing Environments. He has published in top journals and conference proceedings in his area of study and he has co-authored a book on Distributed Cooperative Computing. He served on Program Committees of top conferences in Distributed Computing and he is on the Steering Committee (2008-2010, 2010-2012) of the International Symposium on Distributed Computing (DISC).

**Antonis C. Kakas**, Professor. Undergraduate studies at the Imperial College, University of London, UK (B.Sc. in Mathematics, 1980). Graduate studies at the Imperial College, University of London, UK (M.Sc. in Computer Science, 1987 and Ph.D. in Theoretical Physics, 1984). He has worked as Research Fellow at Kings College, UK (1984-1986), at the University of Zurich, Switzerland (1987-1988), and at Imperial College, UK (1988-1992). He is a member of the editorial board of the international journals *AI Communications*, *Journal of Applied Logic* and *Journal of Theory and Applications of Logic Programming*. His research interests include Knowledge Representation and Reasoning in Artificial Intelligence, with applications to Machine Learning, Planning, Diagnosis, Cognitive Agents Computational Bioscience.

**Georgia Kapitsaki**, Assistant Professor. Undergraduate studies at the National Technical University of Athens (Dipl. Electrical and Computer Engineering, 2005). Graduate studies at the National Technical University of Athens (M.Sc., 2008, co-organised, and Ph.D., 2009, School of Electrical and Computer Engineering). She has worked as a Research Associate at the National Technical University of Athens (2005-2009), as a Laboratory Assistant at the Technical Institute of Pireaus (2007-2009), as well as a software and telecommunications engineer in Germany (2005, 2009-2010). She has also worked as a visiting researcher at the

Otto von Guericke University of Magdeburg and has participated in the organization and in the program committees of international conferences (e.g. ICSR 2016, WISE 2013, WEBIST 2012). Her research interests include Software Engineering, Open Source Software, Context-aware services and Privacy protection.

**Elpida Keravnou-Papailiou**, Professor. Undergraduate studies at Brunel University, UK (B. Tech. in Computer Science, 1982). Graduate studies at Brunel University, UK (Ph.D. in Cybernetics, 1985). She has taught at University College London, UK (Lecturer, 1985-1991; Senior Lecturer, 1991-1992; Director of the M.Sc. Program in Computer Science). She served as first Rector of the Cyprus University of Technology (2012-2015), as Chair of the Governing Board of the Cyprus University of Technology (2009-2010), as Chair of the Cyprus Council for the Recognition of Degrees (2004-2008), as Vice Chair of the Evaluation Committee for Private Universities (2005-2015), as a Member of the Council for Educational Evaluation and Accreditation (2001-2006), as a Member of the Governing Board of the Cyprus National Scholarships Foundation (2003-2006), as a Member of a Committee of Specialists for Education Reforms in Cyprus (2003-2004), as a Member of the Preparatory Committee for the establishment of the Cyprus Open University, and as a Bologna Expert and contact point for academic recognition in Cyprus. At the University of Cyprus she served as Vice Rector for Academic Affairs (2002-2006), as Dean of the School of Pure and Applied Sciences (1999-2002), and as Chair of the Department of Computer Science (1994-1998) where she is currently serving again as Chair (2016-2018). During her term as Vice Rector for Academic Affairs she coordinated the implementation of the Bologna reforms at the University of Cyprus. She is Associate Editor of the journal *Artificial Intelligence in Medicine* (Elsevier) since the launching of the journal in 1989, and a Member of the Editorial Board of the journal *Systems Research and Information Science* (Gordon and Breach) and of the electronic open access journal *Advances in Artificial Intelligence* (Hindawi Publishing Corporation – [www.hindawi.com/journals/aai](http://www.hindawi.com/journals/aai)). During the period 2003-2005 she served as Chair of the Artificial Intelligence in Medicine Europe (AIME) Board. Her research interests include Knowledge Engineering, Artificial Intelligence in Medicine, Expert Systems, Deep Knowledge Models, Diagnostic Reasoning, Temporal Information Systems in Medicine, Temporal Reasoning and Temporal Data Abstraction, Hybrid Decision Support Systems, Quality Assurance, and Flexible Learning Paths. In addition to her publications in scientific journals and conference proceedings she has (co)authored seven scientific books published by Springer, Elsevier, Kluwer, Kogan-Page, Chapman and Hall, Abacus Press, and the Greek Open University. She has served as a Member of the Governing Board (June 2012 – June 2018) and of the Executive Committee (July 2014 – June 2018) of the European Institute of Innovation and Technology (EIT - [www.eit.europa.eu](http://www.eit.europa.eu)).

**Marios Mavronicolas**, Professor and Vice-Rector for International Affairs, Finance and Administration. Undergraduate studies at the National Technical University of Athens, Greece (Diploma in Electrical Engineering, 1985; Summa cum Laude). Graduate studies at Harvard University, USA (M.A., 1988; Ph.D., 1992, both in Computer Science). He has taught at University of Crete, Greece as Visiting Assistant Professor (1992-93), and at the University of Connecticut, USA as Assistant Professor (1999). He is on the Editorial Board of the journals *Theoretical Computer Science*, *Journal of Interconnection Networks and Networks*, and he is the Distributed Computing Column Editor of the *Bulletin of the European Association for Theoretical Computer Science*. He has been the Program Committee Chair for the 11<sup>th</sup> International Workshop on Distributed Algorithms (WDAG 1997), the Program Committee Co-Chair for the 2nd International Workshop on Internet and Network Economics (WINE 2006), and the Program Committee Chair for the 2nd International Symposium on Algorithmic Game Theory (SAGT 2009). He is the Chairman of the Cyprus Council for the Evaluation of Higher Degrees (KY.Σ.A.T.Σ.) and the Vice-Chair of the Assembly of Rectors of Cypriot Universities. His research interests span the area of Algorithms and Complexity, with emphasis on Algorithmic Game Theory, Distributed and Parallel Computing, Networking and the Internet.

**George Pallis**, Assistant Professor. He received his BSc (2001) and Ph.D. (2006) degree in Department of Informatics of Aristotle University of Thessaloniki (Greece). Currently, he is assistant professor at the Computer Science Department, University of Cyprus and Associate Director of Laboratory of Internet Computing. His research interests include Cloud computing with focus on Cloud elasticity and monitoring, Content Delivery Networks, data analytics for Online Social Networks. He is principal institutional investigator in research projects funded by EC (H2020 UNICORN, CELAR FP7, PaaSport FP7, Mandola DG-Justice, iSocial Marie-Curie ITN). He has published over 70 papers in international journals (i.e., IEEE TKDE, ACM TOIT, IEEE TCC, ASONAM), magazines (i.e., CACM, IEEE IC) and conferences (i.e., INFOCOM, CCGrid, BigData) and he is contributor of the first international DIN (German Institute for Standardization) SPEC standard (DIN SPEC 91337). He is Associate Editor in Chief in the IEEE Internet Computing magazine, Associate Editor in the Computing Journal (Springer) and is one of the contributing experts for the EU Roadmap for Advanced Cloud Technologies under H2020.

**George A. Papadopoulos**, Professor. Undergraduate studies at Aston University, UK (B.Sc. in Computer Science and Mathematics, 1982). Graduate studies at Aston University, UK (M.Sc. in Computer Science, 1983) and at the University of East Anglia, UK (Ph.D. in Computer Science, 1989). He has worked as a Researcher at NCR Demokritos, Greece (1981-1982), as a Research Assistant at the Aristotelian University of Thessaloniki, Greece (1983-1985) and as a Research Associate at the University of East Anglia, UK (1987-1990). He is a recipient of an 1995 ERCIM Fellowship visiting GMD in Germany and CWI in the Netherlands. His research interests include Advanced Software Engineering, Parallel and Distributed Systems, Adaptive and Context Aware Systems, e-Health and e-Learning.

**Constantinos S. Pattichis**. Professor. Undergraduate studies at the Higher Technical Institute (H.N.D. in Electrical Engineering, 1979), and at the University of New Brunswick, Canada (B.Sc. in Electrical Engineering, 1983). Graduate studies at the University of Texas at Austin, USA (M.Sc. in Biomedical Engineering, 1984), at the University of Newcastle Upon Tyne, UK (M.Sc. in Neurology, 1988), and at the Queen Mary College, University of London, UK (Ph.D. in Electronic Engineering, 1992). He has worked as a Research Associate (1986-87) and as a Senior Research Scientist (1990-92) at the Cyprus Institute of Neurology and Genetics and has taught as Visiting Lecturer at the Higher Technical Institute of Cyprus (1990-1992). He is Associate Editor of the scientific journals *IEEE Transactions on Information Technology in Biomedicine* and the *IEEE Transactions on Neural Networks*. He served as Chairman of the IEEE Cyprus Section, the Cyprus Association of Medical Physics and Biomedical Engineering and of the conferences Medical and Biological Engineering and Computing (1998) and IEEE MELECON 2000. His research interests include the development of Computational Intelligent Systems (based on Neural Networks and Genetic Algorithms), Data Mining in Medicine, Medical Imaging Analysis and Biosignal Analysis, and Health Telematics.

**Anna Philippou**, Associate Professor. Undergraduate studies at the University of Oxford, UK (B.A. in Mathematics and Computation, 1992). Graduate studies at the University of Warwick, UK (M.Sc. in Parallel Computers and Computation, 1993; PhD in Computer Science, 1996). She has worked as a Teaching Assistant at the University of Warwick, UK (1993-1996) and as a Postdoctoral Research Fellow at the University of Pennsylvania, USA (1997-1998). Her research interests include Concurrency Theory and its Applications, Specification and Verification of Concurrent Systems, Formal Methods for Safety-Critical Systems and Algorithmic Game Theory.

**Andreas Pitsillides**, Professor. Undergraduate studies at University of Manchester, Institute of Science and Technology (UMIST), UK (B.Sc. in Electrical and Electronic Engineering, 1980). Graduate studies at Swinburne University of Technology, Australia (Ph.D. in High Speed Multimedia Networks, 1993). Andreas heads the Networks Research Laboratory (NetRL, <http://www.NetRL.cs.ucy.ac.cy>), which he founded in 2002, and is appointed

Visiting Professor at the University of the Witwatersrand (Wits), School of Electrical and Information engineering, Johannesburg, South Africa. Andreas was the Department of Computer Science Chair from 2014-2016, a Founding member and Chairman of the Board of the Cyprus Academic and Research Network (CYNET) from 2000-2016, and appointed Visiting Professor at the University of Johannesburg, Department of Electrical and Electronic Engineering Science, South Africa (2014 -2017). His broad research interests include communication networks (fixed and mobile/wireless), Nanonetworks and Software Defined Metasurfaces and Metamaterials, the Internet- and Web- of Things, Smart Systems (e.g. Smart Grid) and Smart Spaces (e.g. Home, City), and Internet technologies and their application in Mobile e-Services, especially e-health, and security. He has a particular interest in adapting tools from various fields of applied mathematics such as adaptive non-linear control theory, computational intelligence, game theory, and recently complex systems and nature inspired techniques, to solve problems in communication networks. Published over 270 referred papers in flagship journals (e.g. IEEE, Elsevier, IFAC, Springer), international conferences, and books and book chapters, participated in over 40 European Commission and locally funded research projects with over 6.5 million Euro as principal or co-principal investigator, received several awards, including best paper, presented keynotes, invited lectures at major research organisations, short courses at international conferences and short courses to industry. He serves on the editorial boards of the Journal of Computer Networks (COMNET), serves/served on many international conferences as general chair, technical program chair, and on executive committees, technical committees, guest co-editor, invited speaker, and as a regular reviewer for conference and journal submissions. He is also a member of the International Federation of Automatic Control (IFAC) Technical Committee (TC 1.5) on Networked Systems, and the IFIP working group WG 6.3.

**Yanos Sazeides**, Assistant Professor. Undergraduate studies in Computer Engineering at Oakland University (B.Sc.,1991). Graduate studies at Cornell University (M. Eng. in Electrical Engineering, 1992) and at University of Wisconsin-Madison (Ph. D. in Electrical Engineering, 1999). He has worked at research/development laboratories for high performance processors at HP, Compaq and Intel. He has taught at the University of Cyprus as Visiting Lecturer (2000-2001). His research interests include Computer Architecture with special emphasis on High Performance Processors, Program Behavior, Execution Paradigms and Power Aware Microarchitectures.

**Christos N. Schizas**, Professor. Undergraduate studies at the Queen Mary College, University of London, UK (B.Sc. in Electronic Engineering, 1978). Graduate studies at the University of Indianapolis, USA (M.B.A., 1988) and at the Queen Mary College, University of London, UK (Ph.D. in Systems Theory, 1981). He received the 1979 William Lincoln Shelley award from the University of London of excellence in research, and a Fulbright fellowship for collaborative research in the USA in 1993. He was a Postdoctoral Fellow at the University of London (1980-1983), and was Professor of Computer Information Systems at the University of Indianapolis (1989-1991). Since 1991 he has been with the Department of Computer Science, University of Cyprus. He served as Vice Rector of the University of Cyprus (2002-2006). His research interests include computational intelligence, medical informatics, eHealth, diagnostic and prognostic systems, system modeling and identification of brain activity. He edited conference proceedings and served as associate editor of the journal Technology and Health Care, area editor of the journal, IEEE Transactions on Information Technology in Biomedicine, and member of the editorial board of the journal, Intelligent Systems. He is the founder of the Computational Intelligence laboratory of the University of Cyprus. He has taken part in European Commission initiatives for promoting the Information Society, especially the Euro-Mediterranean partnership.

**Vasos Vassiliou**, Assistant Professor. Undergraduate studies at the Higher Technical Institute (H.N.D. in Electrical Engineering, 1993) and the University of South Florida (B.Sc.

in Electrical Engineering, 1997). Graduate studies at the Georgia Institute of Technology, USA (M.Sc., 1999 and Ph.D., 2002, both in Electrical and Computer Engineering). He has worked as Research and Teaching Assistant at the Georgia Institute of Technology, USA. He has taught as a Visiting Lecturer at the Department of Computer Science, University of Cyprus (2004-2005) and as an Assistant Professor at the Intercollege, Cyprus (2002- 2004). Is the chairman of the Board of Directors of the Cyprus Research and Academic network (CYNET) since 2016. Είναι Πρόεδρος του Διοικητικού Συμβουλίου του Κυπριακού Ερευνητικού και Ακαδημαϊκού Δικτύου (ΚΕΑΔ). He is a member of the Institute of Electrical and Electronic Engineers (IEEE) and of the Association of Computing Machinery (ACM). He is a of the IEEE Cyprus Section Executive Committee and Chair of the IEEE Communications Society Cyprus Chapter. His research interests include High Speed Network Architectures, Mobile Computing, Wireless Communications, Quality of Service (QoS) and Traffic Engineering for Computer and Telecommunication Networks.

**Demetris Zeinalipour**, Associate Professor. Undergraduate studies at the University of Cyprus, Cyprus (B.Sc. in Computer Science, 2000). Graduate studies at the University of California - Riverside, USA (M.Sc., 2003; Ph.D., 2005, both in Computer Science and Engineering). He has worked at the University of California - Riverside, CA, USA (Teaching and Research Assistant, 2000-2005), the University of Cyprus (Visiting Lecturer, 2005-2007), the Open University of Cyprus (Lecturer, 2007-2009) and the University of Cyprus (Lecturer, 2009-2012 and Assistant Professor, 2013-now). He has also a short-term visiting researcher at Akamai Technologies, Cambridge, MA, USA (2004), a Marie-Curie Fellow at the University of Athens, Greece (2007) and a visiting researcher at the University of Pittsburgh, PA, USA (2015). During 2016-2017, he is on a sabbatical at the Max Planck Institute for Informatics, Saarbrücken, Germany. He has founded and directs the Data Management Systems Laboratory (DMSL) at the Department of Computer Science at the University of Cyprus. He is a Senior Member of Association for Computing Machinery (ACM), New York, NY, USA, a Senior Member of Institute of Electrical and Electronics Engineers (IEEE), Piscataway, NJ, USA, a Member of the Advanced Computing Systems Association (USENIX), Berkeley, CA, USA and a Humboldt Fellow of the Alexander von Humboldt Foundation, Bonn, Germany. His research interests include Data Management in Computer Systems and Networks, particularly Mobile and Sensor Data Management; Big Data Management in Parallel and Distributed Architectures; Spatio-Temporal Data Management; Network and Telco Data Management; Crowd, Web 2.0 and Indoor Data Management; Data Privacy Management.

# ***Appendix A: Rules for Diploma Projects***

## **1. GENERAL**

A *Diploma Project* is prepared by a final-year student, usually during the seventh and eighth semesters of study in accordance with the Programme of Studies of the Department. The part of Diploma Project prepared in the first semester is called *Diploma Project I* and the part corresponding to the second semester *Diploma Project II*. These two parts are prepared and completed in *EPL400 - Diploma Project I* and *EPL401 – Diploma Project II*, respectively.

A Diploma Project corresponds to seventeen and a half (17.5) *Credit Units ECTS*, which are credited to the student upon successful completion.

The student registers for the Diploma Project with the approval of the Academic Advisor.

The Department Council appoints a member of the Faculty of the Department, who ensures and coordinates the entire process of developing and assessing the Diploma Projects. This Faculty member is known as the *Diploma Projects Coordinator*.

All the forms and guides mentioned in this section are digitally available on the website of the Department. The Department maintains a *Digital Library for the Diploma Projects* for archiving purposes.

## **2. SUBSTANCE, FORM AND EVALUATION CRITERIA**

### ***2.1 Substance***

Each *Diploma Project* must contain sufficient information that reflects the student's initiative, independent study and productivity (originality, in the broad sense).

The Diploma Project may be of theoretical or practical nature or a combination of both. A Diploma Project may include, for example, an application of existing techniques, extension of known methods in the theory, software, hardware or applications areas, development of a prototype system, address theoretical problems, a survey review or study of a theoretical or practical area, etc.

### ***2.2. Form***

A *Diploma Project* must be a comprehensive document structured in chapters and must follow the rules of the technical guidance report called *Standards for Preparation the Diploma Project*.

The Diploma Project should include an introduction to the subject, an analysis of the importance of project, a description of the related work, a review the work in the area of the topic, a description of the methodology used, listing, classification and evaluation of the results of the work and finally conclusions and suggestions for possible extension of the work.

*Diploma Projects* where software was created and/or used should also include the code of the software in a specific Annex, a description and analysis of the software a separate section, and instructions for the use of the software. The code of such software may not be used as the Thesis document.

### ***2.3 Evaluation Criteria***

The main criteria for the evaluation of the Diploma Project are the following:

- [a] Quality of work (e.g. accuracy and completeness of analysis, appropriateness of methodology, validity of theoretical results, software quality, implementation, consistency of material presented and association of ideas).

- [b] Degree of the objectives achieved of the Diploma Project.
- [c] Degree of understanding by students of the area of the Diploma Project topic.
- [d] Quality of the written language of Diploma Project (e.g. structure and organization, clarity, ease of reading and understanding).
- [e] Quality of Presentation of the Diploma Project. (e.g. oral speech, the adequacy and suitability of multimedia used (such as slides), proper utilization of the allowed time of presentation, and most importantly to point the contribution of Diploma Project through the presentation).

### **3. PROCEDURE**

#### ***3.1 Preparation***

##### ***3.1.1 Submission and Announcement of Topics***

Each member of the Faculty submits to the Department, end of March of each year, a number of Diploma Project topics greater than the ratio of the number of students per Faculty member. Each Faculty member reserves the right not to supervise a number of Diploma Projects larger than the nearest integer above the ratio of students per Faculty member.

Each topic has a title. It is expected that a brief description of each topic is made available to the students by the proposing faculty. (It is also expected that the faculty members will update and renew appropriately the description of the projects on their personal websites).

The *Diploma Projects Coordinator* establishes a list of the submitted Diploma Project topics, and announces the Diploma Project list to the faculty members of the Department and to the final-year students approximately in middle of April.

##### ***3.1.2 Choice of Topic***

The successful completion of at least 156 ECTS is a necessary prerequisite for the assignment of a Diploma Project.

Each student should choose a Diploma Project topic. To this end, the students shall discuss with the corresponding faculty members that have offered the topics, in meetings during a specified period of time. Throughout the process of submission of preferred topics, the students obtain the agreement of the faculty member for the supervision of the corresponding project. This Faculty member will be the *Diploma Project Supervisor* for that student.

With the selected choice of the topics, the student completes a special *Registration Form*, available electronically on the website of the Department which includes the title, description, and any specialized software / hardware or other resources necessary for the preparation of the Diploma Project. The *Registration Form* is signed by the Faculty member, the Academic advisor of the student and it is deposited to the Department no later than the period of registration of students for the semester the student prepare the *first part of the Diploma Project*.

In case of not being able to select topic, the student returns the *Registration Form* to the Department, signed by him/her and the Academic Advisor. In this case, with the filing of the form, the *Diploma Project Coordinator* contacts the Faculty members of the Department, to ensure that every student who submitted the registration form without topic to select a topic before the end of the submission period. In case this is not possible, a special meeting of the Department Council is called to assure that each student is given a topic. The student must choose the topic selected by the Council meeting

Concurrently with the submission of the registration form, the student must register for the EPL 400 course.

##### ***3.1.3 Change of Subject***

Changing topic of the Diploma Project (with the same or another supervisor) is possible within the first three (3) weeks of the semester the student enrolled for the *first part of the Diploma Project* (Diploma

Project I). To this end, using the same procedure that was followed for the submission of the original Diploma Project topic, the student fills in the *Special Registration* Form to the Department in order for the *coordinator of Diploma Project* to approve it.

### **3.2 Preparation**

#### **3.2.1 Supervision**

The supervision of a student who prepares a Diploma Project is the responsibility of the Diploma Project Supervisor. The monitoring and controlling of the Diploma Project progress is done through regular meetings between the student and the supervisor. In some cases a co-supervisor may be indicated. The supervisor must be a PhD holder and may either come from the Department of Computer Science or from an institute or organization outside the Department.

#### **3.2.2 Interim Evaluation**

During the examination period of the first semester in which the student enrolled in the Diploma Project, the student submits to the *Supervisor* a brief Progress Report. Following the submission of the Progress Report, the Supervisor shall submit a written assessment of the progress of the student to the Department, which is also sent to the student. The possible grades for this assessment are Success or Failure. The grade of the Diploma Project I is the student's grade for the course EPL400 which has been enrolled for the current semester.

In the second semester the student can enroll in the Diploma Project II, EPL401, only if the student has succeeded with EPL400 course. In case of a Failure grade results in the student enrolling again in the first part of the Diploma Project (Diploma Project I: EPL400) in the same or different topic (with the same or different supervisor).

### **3.3 Evaluation**

The final evaluation of the Diploma Project takes place towards the end of the semester where the student is registered for *Diploma Project II*.

#### **3.3.1 Second Assessor**

The Diploma Project is assessed by the *supervisor*, and the co-supervisor (if assigned), together with another member of the Faculty, known as the *Second Assessor*. The Diploma Project Coordinator with the collaboration of the Supervisors, publishes a *list of Assessors and Program of Diploma Project presentations*.

In special cases, the Coordinator of the Diploma Project may approve as a *Second Assessor* a Visiting Faculty Member of the Department or a Faculty member from other Department of the University or/and other University in Cyprus or abroad. The approval may be justified in cases of close affinity of the Second Assessor Diploma on the subject of the Diploma Project.

#### **3.3.2 Presentations**

The Diploma Project Coordinator publishes the *Program of Diploma Project presentations* for three days during the week immediately following the examination period. The Program of Diploma Project presentations must be made publicly available to all faculty members of the department and the presentations are open to the public.

Each student who is expected to complete its Diploma Project II based on the Academic Advisor judgment must be listed in the *Diploma Project Presentation list*. These students present their Diploma Project in public in front of their *Academic Advisor* and their *Second Assessor*.

The students who have been excluded from the *Program of the Presentations* of the diploma Project receive a grade equal to *CD (Continuation of Diploma Project)* and must continue working on the same Diploma Project so in the immediate following semester to complete their Diploma with success. Therefore, these students must reregister in the same course, *EPL401*.

#### **3.3.3 Grading**

After the presentation the *Supervisor*, in consultation with the *Second Assessor*, submits the grade for the Diploma Project with written justification comments, in a specific *Assessment Form*, and in

accordance with the procedure for filing course grades. The Assessment Form of the Diploma Project contains different *evaluation criteria* that need to be filled with numerical grades.

A *Failure* grade results in the student enrolling again in the first part of the Diploma Project (*Diploma Project I*) in a different topic with a different *supervisor*. A *Success* grade in Diploma Project receives a numerical grade according to the Rules Studies.

The grade of the Diploma Project is the grade for the courses *EPL401* which is enrolled.

The *Coordinator of the Diploma Project* handles the cases where there is a disagreement on the grade for the Diploma Project between the *Supervisor* and the *second assessor*.

#### **3.3.4 Submit in Digital Format**

Within ten days after the presentation and evaluation of the Diploma Project, the student shall submit to the Department its Diploma project in digital form. Failure to submit timely may result in delay of the student's graduation which may cause the graduation of the student impossible in the current semester.

#### **3.3.5 Final Grade Submission**

The coordinator of the Diploma Project submits the student's grade for the Diploma Project to the Academic Affairs and Student Welfare in time.

## ***Appendix B: Rules for Graduate Studies***

The Department of Computer Science offers *Graduate Degree Programs* that lead to *Master in Advanced Information Technologies* and *PhD in Computer Science*. The programs are published at the Department's Guidebook. The *Graduate Program Committee* coordinates the programs based on the General Rules of the University of Cyprus.

### **[1] Admission Requirements**

- I. 1. The department announces once a year the maximum number of graduate students it can accept for the upcoming academic year starting in September. Applications arrived after the submission deadline is accepted only in case the number of graduate students is not met.
  2. The applicants must submit an application, a CV, official transcripts from all colleges/universities attended, a personal statement about his/her goals and interests, and two letters of recommendations (possibly by faculty members of their college or university, mailed directly to the department). It is not necessary for the applicant to hold an undergrad or college degree at the time he submits his application. However, the applicant must get / have a degree in Computer Science or related field of study before he joins the graduate program. The average grade (GPA) of the applicant should be 6.5/10 (or equivalent to that) and the degree should be from an accredited college / university (as it is defined by the General Rules of University of Cyprus).
  3. Applications are examined by the Graduate Program Committee. The Graduate Program Committee holds the right, based on its judgment, to call the applicant for personal interview or ask more information. The Graduate Program Committee writes an evaluation and admission report and submits it to the Department Council for approval. The Department Council holds the right to accept fewer students than it had announced. The department submits its report to the school it belongs to.
- II. The department assigns an Academic Advisor to every new graduate student. To a PhD student the department assigns a Research Advisor. The Research Advisor is assigned by the Department Council, after suggestion of the Graduate Program Committee, and an agreement between the student and a faculty member. The Research Advisor watches over the research or any other work of the student and provides any necessary guidance.
- III. For students whose undergraduate degree was not related to Computer Science there is a possibility to be asked to take some undergraduate courses offered by the department. The student must pass these undergraduate courses in order to continue the graduate program.

### **[2] Master Degree**

- I. To get a Master Degree in Computer Science, each student must complete successfully courses (a total of 60 ECTS units) from the Graduate Program and complete a Master Thesis of 30 ECTS units, under the supervision of a Research Advisor. The assignment of a Research Advisor is based on the rules of the University Senate and is done before the student submits the Thesis Proposal. The student can transfer up to 15 ECTS units from courses completed successfully from similar graduate programs. Theses completed at other graduate schools are not transferable.
- II. The Thesis must deal with a research topic or a technical issue. It must be of some original contribution or show a thorough and clear understanding of some special topic. Full-time students normally complete the thesis in 6 months study time. When the student has completed successfully courses totaling to 30 ECTS units, he can submit a Form (signed also by his Research Advisor) stating his Master Thesis topic.
- III. The Master Thesis is submitted at the department and defended within the time period decided by the Department Council.
  1. When a Master Thesis is submitted the Chair of the Department appoints a Thesis Examination Committee of three members. The head of the committee is the student's

Research Advisor. It is possible a member of this committee to be faculty member of other department. The Committee can have also external members who do not hold a faculty position. However, the membership must be approved by the Department Council and the external member must hold a PhD Degree or must have a reputation in the field of study.

2. The Master Thesis is defended in a presentation before the Thesis Examination Committee. The head of the Thesis Examination Committee is responsible for the procedures that must be followed during the defense.
3. The Thesis Examination Committee can accept (even with conditions) or reject a Master Thesis. The Thesis Examination Committee writes its decision in a Master Thesis Evaluation Form and submits it to the Department Council for approval. When the Thesis is accepted the department informs the Student Affairs Office for the graduation procedure of the student. When the thesis is rejected, the student can follow the suggestions of the committee and resubmit it for the first and the last time. The submission and thesis defense procedure is followed from the beginning.

IV. The minimum graduation time to get a Master Degree is three semesters and the maximum graduation time is eight semesters.

### [3] **PhD Degree**

- I. The basic requirements to get a PhD Degree are:
  1. (a) Successful completion of at least 60 ECTS units of graduate level courses. A student with a Master or equivalent degree is partially or fully exempt from this requirement.  
  
(b) Successful completion of the Comprehensive Examination which must be taken no later than the fifth semester of his/her studies. The student submits to the department a request to take the Comprehensive Examination.
  2. The Department assigns a Research Advisor to the student that has completed the ECTS units mentioned above.
  3. The structure and the subjects of the Comprehensive Examination are decided by the Department. The Comprehensive Examination is general and attempts to measure the student ability to complete the degree. The topics that are examined are Theory, Software, Hardware, and Applications.
  4. The Comprehensive Examination is presented before the Comprehensive Examination committee which is elected by the Postgraduate Committee of the department after it has been requested by the student's academic research supervisor. The formation of the Comprehensive Examination committee must be approved by the Department committee. The academic research advisor of the student is the chair of the Comprehensive Examination committee.
  5. The Comprehensive Examination consists of three phases. The student should obtain a passing grade in all of them to ensure success in the examination. The three phases are the following:
    - i. Submit to the Comprehensive Examination Committee a written literature review on the student's Research area. The review should have the length and the quality of a published survey article and must demonstrate the student's adequate knowledge and understanding of the topic under investigation and the open problems. To prepare the review, the Research Supervisor may give the student an indicative bibliography. The review is graded by the members of the Comprehensive Examination Committee with a Pass / Fail. When a review receives a passing grade, the student may proceed to an oral examination.
    - ii. The student should make an oral presentation of his/her survey to the committee. The presentation lasts 50-60 minutes, including questions addressed by the committee and the audience. The presentation is open to the public and should be announced to the members of the department and the University.
    - iii. The oral examination of the student, which is made by the members of committee, is closed to the public. The purpose of the examination is to further investigate whether the candidate has the skills and capability to conduct Doctoral-level research work in Computer Science.

6. The Comprehensive Examination Committee submits for approval to the department a list of students that have succeeded in the examination.
  7. A student that fails to pass the first comprehensive examination must take the examination the next time it is offered. A second fail of the student in the Comprehensive Examination disqualifies the student from the PhD program of the department.
  8. Second failure in the comprehensive examination implies exclusion from the PhD candidature in the Department.
- II.
    1. The Post Graduate Program Committee taking into consideration the suggestions of the Research Supervisor appoints a three member Research Committee for the PhD candidate. The chair of the Research Committee is the Research Supervisor of a student. At most, one member of the Research Committee may be a faculty member of another department.
    2. The student is allowed to change his/her Research Supervisor. He/She must submit for approval by the Department Board a request explaining in detail the reasons he/she wishes to change supervisor.
- III.
    1. When the student has passed the Comprehensive Examination he/she submits a written Doctoral Thesis Proposal to his/her Research Committee. The proposal is also presented orally before the Committee members.
      - a. The Doctoral Thesis Proposal must have the following structure:
        1. Introduction
        2. Motivation
        3. Problem Statement – Hypothesis
        4. Approach
        5. Roadmap
        6. Related Work
        7. Preliminary Work
        8. Work to be done
        9. Timeline
        10. Future work
      - b. The Research Committee must examine the Doctoral Thesis Proposal before the end of the next semester. The proposal might be accepted or recommended for resubmission. The final acceptance of the proposal must be given before the start of the seventh year of the student study time. Otherwise, the student case (whether to continue or to terminate his PhD candidacy) is discussed at the Department Council.
- IV.
    1. Every Doctoral student must submit to the Research Supervisor an annual progress report. This report must be submitted before the end of each academic year.
    2. The annual progress report is graded by the Coordinator of the Graduate Studies and the Research advisor of the student with a Pass/Fail. The grade is submitted to Student Affairs and is marked in the student's records to which level the student progress in his/her studies (research, writing).
- V.
    1. Every PhD candidate completes a Dissertation which must be an original and important contribution to the field of study.
    2. The written format of the Dissertation is described in the Department's printed forms. The Dissertation can be submitted no sooner than four semesters before student's admission and completing successfully his Comprehensive Examination.
- VI. The student submits to the department six (6) copies of the Dissertation and a request (signed also by his Research Advisor) for the formation of a Dissertation Examination Committee. After this procedure, the graduate Program Committee, with suggestions from the Research Advisor, appoints an Examination Committee (based on the rules of University's Senate). The Graduate Program Committee assures a copy of the dissertation is sent to the members of the Examination Committee. The dissertation is defended by the candidate before the Examination Committee. Note that the three faculty members of the Department are usually the three members of the Research Committee.

VII. The Chair of the Examination Committee decides the date of the Dissertation Defense. The Defense must take place within three months from the Dissertation submission. All members of the Examination Committee must be present at the Defense. The defense procedure is based on the rules of the University's Senate.

1. The approval of at least four members of the Examination Committee is required to award the degree. In this case, the Examination Committee has the right to request for changes or additions, which considers as necessary. The procedure for monitoring the changes or additions is decided by the Examination Committee and is written clearly in the Evaluation Report.
2. The Examination Committee hands over to the Department Chair a written Evaluation Report of the Dissertation and of the Doctoral Candidate in general, together with its recommendations, in a printed form. The Chair verifies that all the rules and procedures have been correctly followed and hands in the report to the Senate.

VI. A maximum of eight (8) academic years are allowed for the completion of the Doctoral Program.

Approved by the Senate, 149th Meeting, 22/5/2002

## ***Appendix C: Specifications for Preparation of the Master Thesis***

**Abstract.** An abstract is *required*. The body of the abstract may not exceed 400 words in length. Please see the sample abstract page for the format.

**Minimum Margins.** The minimum acceptable margins for all pages of the thesis and the abstract are 3.8 centimeters (1.5 inches) on left and 2.5 centimeters (1 inch) on the top, bottom, and right.

**Paper Requirement.** All pages of the thesis must be printed on 21 x 29.7 centimeter (8.27 x 11.69 inch) *white* paper. This is the regular A4 paper format.

**Font and Point Size.** Recommended fonts include Arial, Times New Roman, and Helvetica with a point size of either 11 or 12 (preferably 11).

**Printing.** Either laser printing or photocopying of high quality is acceptable. Inkjet printing is *not* acceptable as it is water soluble. Only *one side* of the paper is to be used for printing. Printing should be consistently clear and dark.

**Spacing.** The text of the thesis should be *double spaced*. Long quotations, footnotes, appendices, and references may be single spaced.

**Color.** It is recommended that you *not* rely on color to convey information (e.g., use symbols or labels rather than colors to differentiate the lines on a graph, or use stripes and cross-hatching instead of colors to distinguish areas on a map).

**Photographs and Graphics.** Photographs and graphics in the dissertation should be printed or photocopied directly on the paper as high quality black and white images. Scanned images must print clearly. If color must be used, *only* color laser or color photocopy printing is acceptable.

**Use of materials copyrighted by others.** IMPORTANT: Any material included that goes beyond “fair use” requires written permission of the copyright owner. It may be useful to include these in the thesis as an appendix.

**Pagination.** Preliminary pages (i.e., the approval page, acknowledgments, table of contents, and the like) are to be numbered consecutively using lower case *Roman numerals*. All pages of the text, appendices (if any), and references must be numbered consecutively using *Arabic numerals*. The page number of the first page of each Chapter must be centered on the bottom of the page. In all other pages, the page number must be placed on the top of the page, aligned to the right.

**Landscape pages.** The top of a landscape page should be at the left margin and the bottom at the right margin. The page number is to be in the same relative position as on the portrait pages. An easy way to apply page numbers to landscape pages is to run them through the printer twice – once for the text, table, or figure (landscape orientation) and once for the page number (portrait orientation).

**Sequence of the main components of the dissertation.** The appropriate order of the major sections of the thesis follows: the title page, the abstract, the copyright page (if needed), the approval page, acknowledgments, table of contents, the text, bibliography/references, and appendices (if any).

**Bibliography/References.** The ACM (<http://www.acm.org/pubs>) or the IEEE (<http://standards.ieee.org/resources>) reference style should be followed.

**Footnotes and Endnotes** No specific rules. The format that is prescribed by your advisory committee should be followed.

\* \* \*

It is recommended that you use your full legal name on the abstract, the title page, the copyright page (if appropriate), and on the approval page. Make certain that your name appears exactly the same way in all places.

Take a moment to check that all pages in all copies of your thesis are accounted for and in the proper order before submitting final copies to the Departmental Secretary. *One hardcopy and an electronic version* (in pdf format) of the thesis should be submitted to the Departmental Secretary.

\* \* \*

For students that plan to write their thesis using the Latex authoring language, they can download the style file “ucythesis.sty” that creates the required Master thesis format automatically from <http://www.cs.ucy.ac.cy/~chryssis/master-specs.html>.

## ***Appendix D: Specifications for Preparation of the Doctoral Dissertation***

**Abstract.** An abstract is *required*. The body of the abstract may not exceed 400 words in length. See the sample abstract page for the format.

**Minimum Margins.** The minimum acceptable margins for all pages of the dissertation and the abstract are 3.8 centimeters (1.5 inches) on left and 2.5 centimeters (1 inch) on the top, bottom, and right.

**Paper Requirement.** All pages of the dissertation must be printed on 21 x 29.7 centimeter (8.27 x 11.69 inch) *white* paper that it is *at least 25% cotton and 20lbs. weight*. This is a special A4 paper format that can be obtained at bookstores.

**Font and Point Size.** Recommended fonts include Arial, Times New Roman, and Helvetica with a point size of either 11 or 12 (preferably 11).

**Printing.** Either laser printing or photocopying of high quality is acceptable. Inkjet printing is *not* acceptable as it is water soluble. Only *one side* of the paper is to be used for printing. Printing should be consistently clear and dark.

**Spacing.** The text of the dissertation should be *double spaced*. Long quotations, footnotes, appendices, and references may be single spaced.

**Color.** It is recommended that you *not* rely on color to convey information (e.g., use symbols or labels rather than colors to differentiate the lines on a graph, or use stripes and cross-hatching instead of colors to distinguish areas on a map).

**Photographs and Graphics.** Photographs and graphics in the dissertation should be printed or photocopied directly on the paper as high quality black and white images. Scanned images must print clearly. If color must be used, *only* color laser or color photocopy printing is acceptable.
